P.S. Free & New Analytics-Admn-201 dumps are available on Google Drive shared by PracticeMaterial:
<https://drive.google.com/open?id=12PROmZ4J4-FDVSTggHSghHnPI3rz34Sb>

At PracticeMaterial, we are committed to providing our clients with the actual and latest Salesforce Analytics-Admn-201 exam questions. Our real Analytics-Admn-201 exam questions in three formats are designed to save time and help you clear the Analytics-Admn-201 Certification Exam in a short time. Preparing with PracticeMaterial's updated Analytics-Admn-201 exam questions is a great way to complete preparation in a short time and pass the Analytics-Admn-201 test in one sitting.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Section	Weight	Objectives
Topic 1: Installation and Configuration	25%	- Deployment • 1. Deploying Tableau Server • 2. Server architecture - Installation • 1. Initial configuration • 2. Installing Tableau Server
Topic 2: Performance and Monitoring	25%	- Performance • 1. Performance optimization • 2. Caching and query management - Monitoring • 1. Server health monitoring • 2. Log analysis and troubleshooting
Topic 3: Security and Authentication	25%	- Authentication • 1. Authentication methods • 2. SSL configuration - Security • 1. Encryption and access control • 2. Security best practices

Topic 4: User and Content Management	25%	- User Management • 1. Creating and managing users • 2. Roles and permissions - Content Management • 1. Managing projects and workbooks • 2. Data source management

Salesforce Analytics-Admn-201 Valid Exam Pattern, Analytics-Admn-201 Exam Torrent

Whether you are at home or out of home, you can study our Analytics-Admn-201 test torrent. You don't have to worry about time since you have other things to do, because under the guidance of our Analytics-Admn-201 study tool, you only need about 20 to 30 hours to prepare for the exam. You can use our Analytics-Admn-201 exam materials to study independently. Then our system will give you an assessment based on your actions. You can understand your weaknesses and exercise key contents. You don't need to spend much time on it every day and will pass the exam and eventually get your certificate. Analytics-Admn-201 Certification can be an important tag for your job interview and you will have more competitiveness advantages than others.

Salesforce Certified Tableau Server Administrator Sample Questions (Q45-Q50):

NEW QUESTION # 45

What should you do to configure the view URL and enable recording for a site that has recording workbook performance metrics enabled?

- A. Delete the session ID in the URL and reload the view
- **B. Type :record_performance=yes& at the end of the view URL, immediately after the session ID**
- C. Click the Performance link in the toolbar at the top of the view
- D. Type :record_performance=yes& at the end of the view URL, immediately before the session ID

Answer: B

Explanation:

Tableau Server can record performance metrics for workbooks to troubleshoot slow-loading views. This feature must be enabled at the site level (via Settings > General > Allow Performance Recording). Once enabled, you can trigger recording for a specific view by modifying its URL. The correct syntax is to append :record_performance=yes& to the view URL, immediately after the session ID.

Option B (Type :record_performance=yes& at the end of the view URL, immediately after the session ID): Correct. This follows Tableau's documented method for enabling performance recording.

NEW QUESTION # 46

To which site role can you associate the Viewer user-based license level?

- A. Explorer
- B. Explorer (can publish)
- **C. Viewer**
- D. Creator

Answer: C

Explanation:

Tableau Server uses a role-based licensing model with three primary license levels: Creator, Explorer, and Viewer. Each license level corresponds to specific site roles that define what users can do on the server.

Viewer License: This is the most restrictive license, allowing users to view and interact with published content (e.g., dashboards and

visualizations) but not to create or publish new content.

Site Role: The Viewer license can only be associated with the Viewer site role. This role restricts users to viewing capabilities, aligning with the license's purpose.

Option A (Creator): Incorrect. The Creator license is for users who can create, edit, and publish content using Tableau Desktop and the web interface. It corresponds to the Creator site role, not Viewer.

Option B (Explorer (can publish)): Incorrect. This is a variation of the Explorer license, which allows users to edit and publish content within limits. It's more permissive than Viewer.

Option C (Viewer): Correct. The Viewer site role matches the Viewer license level perfectly.

Option D (Explorer): Incorrect. The Explorer license allows users to explore data and create content in the web interface, exceeding the Viewer license's capabilities.

Reference: Tableau Server Documentation - "User Site Roles and Licenses" (https://help.tableau.com/current/server/en-us/license_usage.htm).

NEW QUESTION # 47

You install Tableau Server on a server that has four processor cores. How many instances of each Tableau Server process are installed?

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:

Tableau Server's installer configures process instances based on hardware and deployment type (single-node vs. multi-node). For a single-node installation with 4 cores, we need to consider the default process topology. Let's break this down exhaustively:

Key Processes:

Gateway: Handles incoming requests (1 instance).

Application Server (VizPortal): Manages UI and sessions (1 instance).

VizQL Server: Renders visualizations (2 instances).

Backgrounder: Runs extract refreshes, subscriptions (1 instance).

Data Server: Manages data connections (1 instance).

File Store: Stores extracts (1 instance).

Repository: Metadata database (1 instance, active).

Cluster Controller, Cache Server, etc.: Supporting processes (typically 1 each).

Default Configuration:

On a single-node install, Tableau sets 1 instance per process unless specified otherwise, except for VizQL, which defaults to 2.

The installer doesn't scale instances linearly with cores (e.g., 4 cores 4 instances). Post-install, TSM can adjust this (e.g., tsm topology set-process), but the question asks for the installed default. Minimum hardware (8 cores, 32 GB RAM) suggests higher defaults, but 4 cores still triggers a minimal setup.

Option B (1): Correct with Caveat.

Most processes (e.g., Backgrounder, Gateway, Data Server) default to 1 instance on install, regardless of 4 cores.

VizQL defaults to 2, but the question's phrasing ("each process") implies a general rule.

Historically (and per docs), 1 is the baseline for most, with VizQL as the exception. Interpretation:

Assuming "each" means the typical case, 1 fits most processes on a 4-core single- node setup.

NEW QUESTION # 48

What should you do to configure the view URL and enable recording for a site that has recording workbook performance metrics enabled?

- A. Delete the session ID in the URL and reload the view
- **B. Type :record_performance=yes& at the end of the view URL, immediately after the session ID**
- C. Click the Performance link in the toolbar at the top of the view
- D. Type :record_performance=yes& at the end of the view URL, immediately before the session ID

Answer: B

Explanation:

Tableau Server can record performance metrics for workbooks to troubleshoot slow-loading views. This feature must be enabled at the site level (via Settings > General > Allow Performance Recording). Once enabled, you can trigger recording for a specific view by modifying its URL.

The correct syntax is to append `:record_performance=yes&` to the view URL, immediately after the session ID. For example:

* Original

URL: `http://server/##/site/my-site/views/workbook/view?iid=1`

* Modified

URL: `http://server/##/site/my-site/views/workbook/view?iid=1:record_performance=yes`

&

After loading the view with this parameter, a performance recording is generated and accessible via the Performance option in the toolbar.

* Option B (Type `:record_performance=yes&` at the end of the view URL, immediately after the session ID): Correct. This follows Tableau's documented method for enabling performance recording.

* Option A (Click the Performance link in the toolbar): Incorrect. The Performance link appears only after recording is triggered via the URL; it's not the method to enable it.

* Option C (Type `:record_performance=yes&` immediately before the session ID): Incorrect. The parameter must follow the session ID (e.g., `iid=1`) to function correctly.

* Option D (Delete the session ID in the URL and reload the view): Incorrect. The session ID is required for the view to load properly; removing it breaks the URL.

Reference: Tableau Server Documentation - "Record Performance of a View" (https://help.tableau.com/current/server/en-us/perf_record.htm).

NEW QUESTION # 49

What are two intervals when Tableau Server verifies if data conditions for data-driven alerts are true? (Choose two.)

- A. Whenever a new extract is published
- **B. Whenever extracts in the related workbook are refreshed**
- C. Every 10 minutes
- **D. Every 60 minutes**

Answer: B,D

Explanation:

Data-driven alerts notify users when data meets conditions (e.g., sales > \$10K). Let's examine when Tableau checks these:

* Alert Mechanics:

* Enabled per site (Settings > General > Data-Driven Alerts).

* Backgrounder evaluates conditions against extract data.

* Check Intervals: Configurable via tsm configuration set `-k dataAlerts.checkIntervalInMinutes` (default: 60 minutes).

* Refresh Trigger: Also checks post-extract refresh for immediate updates.

* Option A (Every 60 minutes): Correct.

* Details: Default interval-Backgrounder polls every hour to evaluate alert conditions.

* Config: Adjustable (e.g., `-v 30` for 30 minutes).

* Option D (Whenever extracts in the related workbook are refreshed): Correct.

* Details: An extract refresh updates the data, triggering an immediate alert check to catch changes promptly.

* Why: Ensures timely notifications without waiting for the next poll.

* Option B (Every 10 minutes): Incorrect.

* Why: Not the default-possible via config, but not standard.

* Option C (Whenever a new extract is published): Incorrect.

* Why: Publishing creates the extract; alerts trigger on refreshes or polling, not initial publication.

Why This Matters: Timing affects alert responsiveness-balancing frequency and server load is key.

Reference: Tableau Server Documentation - "Data-Driven Alerts" (https://help.tableau.com/current/server/en-us/data_alerts.htm).

NEW QUESTION # 50

.....

Our web-based practice exam software is an online version of the Salesforce Analytics-Admn-201 practice test. It is also quite useful for instances when you have internet access and spare time for study. To study and pass the Salesforce Analytics-Admn-201 Certification Exam on the first attempt, our Salesforce Analytics-Admn-201 practice test software is your best option.
