최신 Fortinet Certified Solution Specialist FCSS_SDW_AR-7.4 무료샘플문제 (Q40-Q45):

질문 # 40

Refer to the exhibit, which shows an SD-WAN zone configuration on the FortiGate GUI. What can you conclude about the zone and member configuration on this device?

- A. You can delete the virtual-wan-link zones.
- B. The underlay zone contains three members.
- C. You can move HUB1-VPN3 from the HUB1 zone to the overlay-shops zone.
- D. The overlay-factories zone contains no member.

정답: D

설명:

The overlay-factories zone is shown with a red icon, indicating that it has no members assigned to it, unlike the other zones which are expandable and show member interfaces.

질문 # 41

Refer to the exhibits. You use FortiManager to configure SD-WAN on three branch devices.

When you install the device settings, FortiManager prompts you with the error "Copy Failed" for the device branch1_fat. When you click the log button, FortiManager displays the message shown in the exhibit.

Based on the exhibits, which statement best describes the issue and how you can resolve it?

질문 # 42

Refer to the exhibit. The administrator used the SD-WAN overlay template to prepare an IPsec tunnels configuration for a hub-and-spoke SD-WAN topology. The exhibit shows the FortiManager installation preview for one FortiGate device. Based on the exhibit, which statement best describes the configuration applied to the FortiGate device?

- A. It is a hub device. It can send ADVPN shortcut offers.
- B. It is a spoke device that establishes dynamic IPsec tunnels to the hub It can send ADVPN shortcut requests.
- C. It is a hub device. It will automatically discover the spoke devices and add them to the SD-WAN topology.
- D. It is a spoke device that establishes dynamic IPsec tunnels to the hub. The local subnet range is 10.10.128.0/23.

정답: A

설명:

The phase1-interface shows set type dynamic, set peertype any, and set mode-cfg enable with an address pool (ipv4-start-ip, ipv4-end-ip, ipv4-netmask). Those are dial-up server settings-i.e., a hub handing out virtual IPs to spokes. It also has set auto-discovery-sender enable, allowing the hub to participate in ADVPN shortcut negotiation (sending offers).

질문 # 43

When you use the command `diagnose sys session list`, how do you identify the sessions that correspond to traffic steered according to SD-WAN rules?

- A. You identify sessions steered according to SD-WAN rules with the data `vwf_mbr_seq`.
- B. You cannot identify SD-WAN sessions. You must use the `sdwan_session` filter.
- C. You identify sessions steered according to SD-WAN rules with the data `sdwan_service_id`.
- D. You identify sessions steered according to SD-WAN rules with the flag `vwf`.

정답: C

설명:

When using the `diagnose sys session list` command, SD-WAN-specific session steering is indicated by the presence of the `sdwan_service_id` field in the session data. This identifier ties the session directly to a specific SD-WAN rule or service. As noted in the Fortinet documentation: "Sessions that are handled according to SD-WAN rules will include a service ID tag (`sdwan_service_id`) in their session listing. This allows administrators to correlate live sessions with SD-WAN policy matches for troubleshooting and visibility." This is a crucial diagnostic tool, as it distinguishes between traffic managed by traditional routing and that explicitly controlled by SD-WAN steering logic, aiding in operational insight and troubleshooting.

질문 # 44

Refer to the exhibit.

BGP configuration

```
config router bgp
  set as 65000
  set router-id 10.200.99.253
  set ibgp-multipath enable
  set additional-path enable
  set additional-path-select 3

      set soft-reconfiguration enable
      set remote-as 65000
    next
    edit "VPN2"
      set soft-reconfiguration enable
      set remote-as 65000
    next
    edit "VPN3"
      set soft-reconfiguration enable
      set remote-as 65000
    next
  end
  config neighbor-range
    edit 1
      set prefix 192.168.1.0 255.255.255.192
      set neighbor-group "VPN1"
    next
    edit 2
      set prefix 192.168.1.64 255.255.255.192
      set neighbor-group "VPN2"
    next
    edit 3
      set prefix 192.168.1.128 255.255.255.192
      set neighbor-group "VPN3"
    next
  end
end
```

The exhibit shows the BGP configuration on the hub in a hub-and-spoke topology. The administrator wants BGP to advertise prefixes from spokes to other spokes over the IPsec overlays, including additional paths.

However, when looking at the spoke routing table, the administrator does not see the prefixes from other spokes and the additional paths. Which three settings must the administrator configure inside each BGP neighbor group so spokes can learn the prefixes of other spokes and their additional paths? (Choose three.)

- A. Enable route-reflector-client.
- B. Enable route-reflector-server

- C. Set adv-additional-path to the number of additional paths to advertise.
- D. Set additional-path to send
- E. Set additional-path to forward

정답: A,C,D

설명:

The hub must send additional paths to spokes (set additional-path send).

The hub must treat each spoke as a route-reflector client so spoke routes are reflected to other spokes.

The hub must specify how many additional paths to advertise (set adv-additional-path <n>).
