L4M7真題 & L4M7認證

CIPS的L4M7考試其實是一個技術專家考試，CIPS的L4M7考試可以幫助和促進IT人員有一個優秀的IT職業生涯，有了好的職業生涯，當然你就可以為國家甚至企業創造源源不斷的利益，從而去促進國家經濟發展，如果所有的IT人員都這樣，那麼民富則國強。我們KaoGuTi CIPS的L4M7考試培訓資料可以幫助IT人員達到這一目的，保證100%獲得認證，如果需要思考，還不如果斷的做出決定，選擇我們KaoGuTi CIPS的L4M7考試培訓資料。

最新的 Level 4 Diploma in Procurement and Supply L4M7 免費考試真題 (Q272-Q277):

問題 #272

ZTY Ltd is looking for a new location for their spare parts warehouse. The choice of geographical location for the warehouse must be able to provide next day delivery to its customers. Which of the following criteria would be important to ZTY Ltd?

- A. Ease of access to suitable transport infrastructure
- B. The type of material handling equipment available
- C. That the building was constructed in the last five years
- D. Being close to the preferred raw material suppliers

答案： A

問題 #273

Which of the following is a forecasting technique?

- A. Time-weighted series
- B. ABC analysis
- C. LIFO
- D. Moving average

答案： D

解題說明：

Last in, first out (LIFO) is a method used to account for inventory that records the most recently produced items as sold first. Under LIFO, the cost of the most recent products purchased (or produced) are the first to be expensed as cost of goods sold (COGS)- which means the lower cost of older products will be reported as inventory.

Moving average: a calculation to analyse data by creating series of averages of different subset of full data set. It is commonly used with time series data to smooth out short-term fluctuation and highlight long-term trends or cycle ABC analysis is a method of analysis that divides the subject up into three categories: A, B and C.

There is no technique called time-weighted series.

問題 #274

To improve the security of a warehouse, alarm systems are commonly used. Which of the following is an important part of these systems?

- A. Fencing
- B. CCTV
- C. Sensors
- D. Lighting

答案： C

解題說明：

The most basic alarm consists of one or more sensors to detect intruders, and an alerting device to indicate the intrusion. However, a typical premises security alarm employs the following components:

- Premises control unit (PCU), Alarm Control Panel (ACP), or simply panel: The "brain" of the system, it reads sensor inputs, tracks arm/disarm status, and signals intrusions. In modern system, this is typically one or more computer circuit boards inside a metal enclosure, along with a power supply.

- Sensors: Devices which detect intrusions. Sensors may be placed at the perimeter of the protected area, within it, or both. Sensors can detect intruders by a variety of methods, such as monitoring doors and windows for opening, or by monitoring unoccupied interiors for motions, sound, vibration, or other disturbances.

- Alerting devices: These indicate an alarm condition. Most commonly, these are bells, sirens, and/or flashing lights. Alerting devices serve the dual purposes of warning occupants of intrusion, and potentially scaring off burglars. These devices may also be used to warn occupants of a fire or smoke condition.

- Keypads: Small devices, typically wall-mounted, which function as the human-machine interface to the system. In addition to buttons, keypads typically feature indicator lights, a small multi-character display, or both.etc.

- Interconnections between components. This may consist of direct wiring to the control unit, or wireless links with local power supplies.

In addition to the system itself, security alarms are often coupled with a monitoring service. In the event of an alarm, the premises

control unit contacts a central monitoring station. Operators at the station see the signal and take appropriate action, such as contacting property owners, notifying police, or dispatching private security forces. Such signals may be transmitted via dedicated alarm circuits, telephone lines, or the internet.

問題 #275

A logistics company has a 2-story warehouse in the suburban area

a. The goods receiving area and dispatch area are located on the ground floor only. There is a lift connecting the two floors. The daily operations of the warehouse are quite busy. Which of the following would be the best arrangement for this warehouse?

- A. Pallets, roller cages and other bulky items will be stored on the ground floor, smaller items in plastic tote boxes will be stored on the first floor
- B. Small items in tote boxes will be stored on the ground floor with forklifts and other equipment, high-usage palletised items will be stored on the first floor
- C. Forklifts and other warehouse equipment will park on the ground floor, all inventories will be stored on the first floor
- D. Medium- to low-usage palletised items will be stored on the ground floor, high-usage items will be stored on the first floor where the building administrative office is located

答案： A

解題說明：

The purposes of a warehouse are to keep the inventories in good condition and to ensure that the operations is smooth. In the scenario, the warehouse has 2 stories, with goods-in and goods-out areas located on the ground floor and a lift connecting the stories. The lift could become a bottleneck if the goods inside the warehouse are not well-arranged.

Since the lift is often small with limited load capacity, putting heavy bulk items on the first floor will cause bottleneck and increase the chance of accidents. Therefore, palletised items (even they have low-usage) should be placed on the ground floor. Smaller and lighter items should be stored on the first floor.

問題 #276

Which of the following supply chain activities can distort data for forecasting inventory?

1. Sales promotions by the marketing department
2. Over-ordering by customers
3. Increase in stock movements in the warehouse
4. Volatile logistic and container prices

- A. 1 and 4
- B. 2 and 3
- C. 5 and 4
- D. 1 and 2

答案： D

問題 #277
