CrowdStrike Certified Falcon Hunter Sample Questions (Q43-Q48):

NEW QUESTION # 43

The Events Data Dictionary found in the Falcon documentation is useful for writing hunting queries because:

- A. It provides a reference of information about the events found in the Investigate > Event Search page of the Falcon Console
- B. It provides a list of all the detect names and descriptions found in the Falcon Cloud
- C. It provides pre-defined queries you can customize to meet your specific threat hunting needs
- D. It provides a list of compatible splunk commands used to query event data

Answer: A

Explanation:

This is the correct answer for the same reason as above. The Events Data Dictionary provides a reference of information about the events found in the Investigate > Event Search page of the Falcon Console, which is useful for writing hunting queries. It does not provide pre-defined queries, detect names and descriptions, or compatible splunk commands.

NEW QUESTION # 44

Which of the following is an example of a Falcon threat hunting lead?

- A. A help desk ticket for a user clicking on a link in an email causing their machine to become unresponsive and have high CPU usage
- B. Security appliance logs showing potentially bad traffic to an unknown external IP address
- C. An external report describing a unique 5 character file extension for ransomware encrypted files
- D. **A routine threat hunt query showing process executions of single letter filename (e.g., a.exe) from temporary directories**

Answer: D

Explanation:

A Falcon threat hunting lead is a piece of information that can be used to initiate or guide a threat hunting activity within the Falcon platform. A routine threat hunt query showing process executions of single letter filename (e.g., a.exe) from temporary directories is an example of a Falcon threat hunting lead, as it can indicate potential malicious activity that can be further investigated using Falcon data and features. Security appliance logs, help desk tickets, and external reports are not examples of Falcon threat hunting leads, as they are not directly related to the Falcon platform or data.

NEW QUESTION # 45

What kind of activity does a User Search help you investigate?

- A. A list of DNS queries by the specified user account
- B. A count of failed user logon activity
- C. **A list of process activity executed by the specified user account**
- D. A history of Falcon UI logon activity

Answer: C

Explanation:

User Search is an Investigate tool that helps you investigate a list of process activity executed by the specified user account. It shows information such as process name, command line, parent process name, parent command line, etc. for each process that was executed by the user account on any host in your environment. It does not show a history of Falcon UI logon activity, a count of failed user logon activity, or a list of DNS queries by the specified user account.

NEW QUESTION # 46

Which of the following Event Search queries would only find the DNS lookups to the domain: www.randomdomain.com?

- A. **event_simpleName=DnsRequest DomainName=www randomdomain com**
- B. Dns=randomdomain com
- C. ComputerName=localhost DnsRequest "randomdomain com"
- D. event_simpleName=DnsRequest DomainName=randomdomain com ComputerName=localhost

Answer: A

Explanation:

This Event Search query would only find the DNS lookups to the domain www.randomdomain.com, as it specifies the exact event type and domain name to match. The other queries would either find other events or domains that are not relevant to the question.

NEW QUESTION # 47

Which tool allows a threat hunter to populate and colorize all known adversary techniques in a single view?

- A. OpenXDR
- **B. MITRE ATT&CK Navigator**
- C. OWASP Threat Dragon
- D. MISP

Answer: B

Explanation:

MITRE ATT&CK Navigator is a tool that allows a threat hunter to populate and colorize all known adversary techniques in a single view. It is based on the MITRE ATT&CK framework, which is a knowledge base of adversary behaviors and tactics. The tool enables threat hunters to create custom matrices, layers, annotations, and filters to explore and model specific adversary techniques, with links to intelligence and case studies.

NEW QUESTION # 48

.....
