## SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition Sample Questions (Q38-Q43):

### NEW QUESTION # 38

In which application can you see the available business context capacity remaining for extension items?

- **A. Extensibility Cockpit app**
- B. Extensibility Explorer app
- C. Extensibility Inventory app
- D. Custom Reusable Elements app

**Answer: A**

Explanation:

The Extensibility Cockpit app within SAP S/4HANA Cloud Public Edition is a central tool for managing and monitoring the extensibility aspects of the system. It provides an overview of the extension items created, including custom fields, custom business objects, and other extension elements. Importantly, it also shows the available business context capacity remaining for these extension items, which is crucial for ensuring that the system's extensibility is managed within the provided limits. This helps in planning and managing customizations effectively, ensuring that the system remains scalable and performant.

### NEW QUESTION # 39

Which type of testing should be done after a release upgrade has occurred?

- **A. Regression tests**
- B. Integration tests
- C. User Acceptance tests
- D. String tests

**Answer: A**

Explanation:

Regression tests are a type of testing that should be done after a release upgrade has occurred. Regression tests are performed to ensure that the existing functionality of the system is not affected by the changes introduced by the new release. Regression tests help to identify any defects or errors that may have been introduced or uncovered by the release upgrade. Regression tests are part of the quality assurance process and are essential for ensuring the stability and reliability of the system. #### NEW QUESTION # 40

What defines the organizational entities that are required in SAP Central Business Configuration?

Note:

There are 2 correct answers to this question

- A. The selected deployment target
- B. Added partner content
- C. System consistency checks
- D. The selected scope

**Answer: A,D**

Explanation:

The organizational entities that are required in SAP Central Business Configuration are defined by the selected deployment target and the selected scope. The deployment target specifies which SAP cloud solutions are included in the project, such as SAP S/4HANA Cloud, public edition. The scope specifies which business processes and countries/regions are included in the project, such as sales or professional services.

These choices determine which organizational units are required to run the underlying processes, such as company, business residence, sales organization, or project unit. Added partner content and system consistency checks do not define the organizational entities, but rather enhance or validate the configuration. References = SAP Central Business Configuration - Overview, page 5; Introducing SAP Central Business Configuration In SAP Central Business Configuration, the organizational entities that need to be defined for an SAP S

/4HANA Cloud Public Edition implementation are influenced by two primary factors: the selected deployment target and the selected scope. The deployment target refers to the specific environment or system where SAP S/4HANA Cloud will be implemented. This choice can affect which organizational entities are necessary based on the technical and business requirements of that environment. The selected scope, on the other hand, pertains to the business processes and functions that the company intends to use within SAP S

/4HANA Cloud. This determines the organizational structures, such as company codes, sales organizations, and purchasing organizations, that need to be set up to support the scoped processes. Both factors are integral to ensuring that the configuration supports the business's operational needs and strategic objectives.
