正解: A、C

質問 # 140

Get Cloudy Consulting needs to evaluate the completeness and consistency of contact information in Salesforce. Their sales reps often have incomplete information about their accounts and contacts. Additionally, they are not able to interpret the information in a consistent manner. Get Cloudy Consulting has identified certain "key" fields which are important to their sales reps. What are two actions Get Cloudy Consulting can take to review their data for completeness and consistency? (Choose two.)

- A. Run a process that can fill in default values for blank fields.
- B. Run one report per key field, grouped by that field, to understand its data variability.
- C. Run a report which shows the last time the key fields were updated.
- D. Run a report that shows the percentage of blanks for the important fields.

正解: C、D

解説:

Running a report that shows the last time the key fields were updated can help Get Cloudy Consulting identify stale or outdated data and prioritize data cleansing activities. Running a report that shows the percentage of blanks for the important fields can help Get Cloudy Consulting measure the completeness of their data and identify gaps or missing value

質問 # 141

A company has 12 million records, and a nightly integration queries these records.

Which two areas should a Data Architect investigate during troubleshooting if queries are timing out? (Choose two.)

- A. Create a formula field instead of having multiple filter criteria.
- B. Make sure the query doesn't contain NULL in any filter criteria.
- C. Create custom indexes on the fields used in the filter criteria.
- D. Modify the integration users' profile to have View All Data.

正解: B、C

解説:

Making sure the query does not contain NULL in any filter criteria can avoid full table scans and leverage indexes more efficiently. Queries with NULL filters are not selective and can cause performance issues.

Creating custom indexes on the fields used in the filter criteria can also enhance the query performance by reducing the number of records to scan.

質問 # 142

Universal Containers (UC) has 50 million customers and stores customer order history on an ERP system. UC also uses Salesforce

What should a data architect do in order to provide this functionality, while preserving the user experience?

- A. Import the order history into a custom Salesforce object, update nightly
- B. Use Salesforce Connect and an external object to display the order history in Salesforce
- C. Embed the ERP system in an iframe and display on a custom tab.
- D. Use an Apex callout to populate a text area field for displaying the order history.
