SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition Sample Questions (Q19-Q24):

NEW QUESTION # 19

You have assigned a deployment target in SAP Central Business Configuration, but have not yet completed the Confirm Scoping milestone.

Which of the following tasks can you complete? Note: There are 2 correct answers to this question.

- A. Rename the deployment target.
- B. Define the group currency.
- C. Create a company code.
- D. Assign a different deployment target.

Answer: A,D

Explanation:

You can rename or assign a different deployment target in SAP Central Business Configuration before completing the Confirm Scoping milestone. This allows you to change the system tenant that will be used for the initial deployment of the content. However, you cannot define the group currency or create a company code before confirming the scoping, as these are configuration activities that require a deployed system. References = Deployment Targets, Assigning a Deployment Target

NEW QUESTION # 20

You are using the Test Automation Tool. When do you define a data variant?

- A. After customizing a test process.

- B. After providing consent for Post-Upgrade Testing.
- C. After binding a process step field to a Test Data Container.
- D. After creating a test plan.

Answer: A

Explanation:

A data variant is a set of data values that can be used to execute a test process in the Test Automation Tool.

You can define multiple data variants for a test process to test different scenarios with different input data. You can also use data variants to parameterize your test process and reuse it for different test cases¹.

You define a data variant after binding a process step field to a Test Data Container. A Test Data Container is a reusable object that stores test data for a specific field or parameter. You can create and manage Test Data Containers in the Manage Test Data app.

You can bind a process step field to a Test Data Container by selecting the field in the Test Automation Tool and choosing the Test Data Container from the list. This will create a link between the field and the Test Data Container, allowing you to use the data stored in the Test Data Container for the field².

After binding a process step field to a Test Data Container, you can define a data variant by selecting the Test Data Container and choosing the Data Variant option. This will open a dialog where you can enter the data values for the data variant. You can also specify a name and a description for the data variant. You can create as many data variants as you need for a Test Data Container². Therefore, the correct answer is B, as you define a data variant after binding a process step field to a Test Data Container.

References = 1 Test Automation Tool - SAP Help Portal 2 Test Data Containers - SAP Help Portal In the context of using the Test Automation Tool within SAP S/4HANA Cloud Public Edition, defining a data variant is a crucial step. This step occurs:

* After binding a process step field to a Test Data Container: A Test Data Container (TDC) is used to store data that can be reused across multiple test cases. When a field in a process step is bound to a TDC, it means that the test case will use the data specified within the TDC. After this binding, a data variant can be defined to specify different sets of data or conditions under which the test case should be executed. This allows for more flexible and comprehensive testing scenarios, ensuring that the application behaves as expected under various conditions.

NEW QUESTION # 21

What can you do with the SAP for Me mobile app? Note: There are 2 correct answers to this question.

- A. Interact with SAP easily
- B. Get full transparency into your SAP product portfolio
