100% Pass 2026 Arch-303: Latest Salesforce Certified B2C Commerce Architect Exam Syllabus

You can learn our Arch-303 test prep in the laptops or your cellphone and study easily and pleasantly as we have different types, or you can print our PDF version to prepare your exam which can be printed into papers and is convenient to make notes. Studying our Arch-303 exam preparation doesn't take you much time and if you stick to learning you will finally pass the exam successfully. Believe us because the Arch-303 Test Prep are the most useful and efficient, and the Arch-303 exam preparation will make you master the important information and the focus of the exam. We are sincerely hoping to help you pass the exam.

Salesforce Certified B2C Commerce Architect Sample Questions (Q59-Q64):

NEW QUESTION # 59

During code review, the Architect found that there is a service call on every visit of the product detail woe (PDP).

What best practices should the Architect ensure are followed for the service configuration?

Choose 2 answers

- A. Service mock up call is configured.
- B. Circuit breaker is enabled.
- C. Service timeout is set.
- D. Service logging is disabled.

Answer: A

Explanation:

For logging practices in a complex LINK cartridge integration, the recommendation is:

* Get logger for cartridge-specific category (C): This practice allows for more precise and relevant logging by focusing on the specific cartridge, making troubleshooting more efficient.

* Report debug level message for the back-end asynchronous communication: This ensures that all detailed interactions are logged, providing valuable data for diagnosing issues.

* Report all errors at error level message: This categorizes all critical issues under error logs, which is essential for quick identification and resolution of problems affecting the system's operations.

This structured logging strategy enhances the ability to monitor and troubleshoot the system effectively, especially in complex integrations where multiple components interact asynchronously.

NEW QUESTION # 60

A client receives multiple feeds from third parties on the same SFTP location:

- * Product prices (sftp: prod/prices)
- * Stores information (sftp: prod/stores;
- * Product information (sftp: prod/catalog)
- * Categories information (sftp: prod/marketing)
- * Content (sftp: prod/marketing)

Some of the feeds are placed on sftp multiple times a day, as the information is updated in the source system.

The Architect decides to have only two jobs:

- * One that checks and downloads available feeds every hour
- * One that imports the files from Webdav once a day before the data replication, using the standards steps available in the Job Framework Which design is correct for the import Job, taking the steps scope in consideration?

- A. - three sibling flows Import steps In parallel: import products, stores, prices- fourth flow executes: import categories- last flow executes steps in sequence: reindex, Import content
- B. - four sibling flows execute steps in parallel: import products, stores, prices, content- last flow executes steps in sequence import categories, reindex
- C. - four sibling flows execute steps in parallel: import products, stores, prices, content- fifth flow executes: import categories- last flow executes steps in sequence: reindex
- D. -Four sibling flows execute steps in parallel: import products, stores, price, content-last flow executes steps in sequence: import:categories, reindex

Answer: B

Explanation:

This design maximizes efficiency and concurrency. By having the jobs that import products, stores, prices, and content run in parallel, the system can handle multiple data streams simultaneously, reducing total processing time. The sequential execution of importing categories followed by reindexing ensures that all new and updated information is properly indexed and available for site use, following the completion of the import of more frequently updated data. This order respects dependencies between steps and aligns with best practices for handling complex data workflows in B2C Commerce environments.

NEW QUESTION # 61

A client has a single site with multiple domains, locales, and languages. After launch, there is a need for the client to perform offline maintenance. The client would like to show the same maintenance page for each locale.

Which version of aliases,Json file below will accomplish this task?

- A.
- B.
- C.
- D.

Answer: B

Explanation:

Option C correctly addresses the requirement for showing the same maintenance page across multiple locales by having each different domain alias ("nto.eu", "nto.at", "nto.de") mapped to the same www domain ("www.nto.eu"). This setup allows all traffic, regardless of the original locale-specific domain, to be directed to a single, unified maintenance page hosted under the "www.nto.eu" domain. This ensures consistency in the maintenance message presented to all users, irrespective of their regional domain.

NEW QUESTION # 62

An integration cartridge implements communication between the B2C Commerce Storefront and a third-party service provider. The cartridge contains the localServiceRegistry code:

How does this code sample accomplish authentication to the service provider?

- A. By performing a signed SOAP Auth request using a certificate.
- B. By Issuing a Basic Auth request to the service provider.
- **C. By disabling Basic Auth and executing the service authentication call.**
- D. By wrapping the authentication service call with Basic Auth.

Answer: C

Explanation:

The code sample shows the creation of a service request to a third-party service provider, where the authentication method is explicitly set to 'NONE' using the line `svc.setAuthentication("NONE");`. This configuration implies that the request does not use Basic Authentication or any embedded credentials like client ID and secret in the HTTP headers for authentication purposes. Instead, it builds the authentication details into the request body, which suggests that the service expects credentials as part of the payload rather than as part of the standard authentication headers, thus effectively disabling Basic Auth for this transaction.

NEW QUESTION # 63

During implementation, the team found that there is a notification controller exposed for an external service that marks the order as paid when notification is received. The notification URL is sent to the service together with the payment request and contains only the URL with orderID as the parameter.

What should the Architect recommend to the team in order to prevent the unauthorized usage of the controller to mark the orders as paid?

- **A. Add an order token in the callback URL and match the token against the one stored on the order.**
- B. Add a customer number in the callback URL and match the customer number against the one stored on the order.
- C. Add HTTPS restriction to the controller start node.
- D. Add a session attribute and validate it on the callback.

Answer: A

Explanation:

To enhance the security of the notification controller exposed for marking orders as paid, the recommended approach is to add an order-specific token to the callback URL (Answer C). This token should be verified against a stored value on the order to ensure the authenticity and integrity of the payment notification. This method prevents unauthorized use of the controller, as only callbacks containing the correct, order-specific token would be allowed to mark orders as paid. This strategy is essential in maintaining secure and reliable transaction processes within Salesforce B2C Commerce.

NEW QUESTION # 64

.....

The Arch-303 desktop practice test is accessible after software installation on Windows computers. However, you can take the web-based Arch-303 practice test without prior software installation. All operating systems such as Mac, iOS, Windows, Linux, and Android support the web-based Salesforce Certified B2C Commerce Architect Arch-303 Practice Exam. Since it is an online Salesforce Certified B2C Commerce Architect Arch-303 practice exam, therefore, you can take it via Chrome, Opera, Internet Explorer, Microsoft Edge, and Firefox.
