

DOP-C02最新試題 - DOP-C02學習資料

從Google Drive中免費下載最新的Fast2test DOP-C02 PDF版考試題庫：https://drive.google.com/open?id=1yoSPVnti3SCjamtcEMwEsqLEGP2JjM_

在這個競爭激烈的IT行業中，擁有一些認證證書是可以幫助你步步高升的。很多公司升職加薪的依據就是你擁有的認證證書的含金量。Amazon DOP-C02認證考試就是個含金量很高的考試。Amazon DOP-C02 認證證書能滿足很多正在IT行業拼搏的人的需求。Fast2test可以為你提供Amazon DOP-C02認證考試的針對性訓練。你可以先在網上免費下載Fast2test為你提供的關於Amazon DOP-C02 認證考試的培訓工具的試用版和部分練習題及答案作為嘗試。

獲得 Amazon DOP-C02 認證證書表明對 DevOps 實踐和 AWS 服務具有高水平的熟練程度。這是一個對於想要在 DevOps 和 AWS 中推進自己的職業生涯的專業人士非常有價值的資格。該認證還提供了 AWS 認證 DevOps 工程師 - 專業社區的進入權，認證的專業人士可以與領域內的其他人聯繫，分享知識和最佳實踐，並保持最新 DevOps 和 AWS 的發展。

獲得AWS認證的DevOps工程師 - 專業認證，展示了對AWS上DevOps工程的高度專業知識，可以幫助專業人士在這個領域中取得進展。對於那些負責設計和管理在AWS上的複雜系統的人以及那些希望將他們的AWS技能提高到更高水平的人來說，這是一個必要的資格證書。

選擇我們有效的DOP-C02最新試題: AWS Certified DevOps Engineer - Professional, Amazon DOP-C02當然很簡單通過

Fast2test是一個能給很多人提供便利，滿足很多人的需求，成就很多人夢想的網站。如果你正在為通過一些Amazon 認證考試而憂心重重，選擇Fast2test的說明吧。Fast2test可以使你安心，因為我們擁有好多關於DOP-C02認證考試相關的培訓資料，品質很高，內容範圍覆蓋範圍很廣並且還很有針對性，會給你帶來很大的有幫助。選擇Fast2test你是不會後悔的，它能幫你成就你的職業夢想。

最新的 AWS Certified Professional DOP-C02 免費考試真題 (Q253-Q258):

問題 #253

A DevOps engineer uses AWS CodeBuild to frequently produce software packages. The CodeBuild project builds large Docker images that the DevOps engineer can use across multiple builds. The DevOps engineer wants to improve build performance and minimize costs. Which solution will meet these requirements?

- A. Create custom AMIs that contain the cached Docker images. In the CodeBuild build, launch Amazon EC2 instances from the custom AMIs.
- B. Store the Docker images in an Amazon Elastic Container Registry (Amazon ECR) repository. Modify the CodeBuild project runtime configuration to always use the most recent image version.
- C. Store the Docker images in an Amazon Elastic Container Registry (Amazon ECR) repository. **Implement a local Docker layer cache for CodeBuild.**
- D. Cache the Docker images in an Amazon S3 bucket that is available across multiple build hosts. Expire the cache by using an S3 Lifecycle policy.

答案: C

解題說明:

* Step 1: Storing Docker Images in Amazon ECR Docker images can be large, and storing them in a centralized, scalable location can greatly reduce build times. Amazon Elastic Container Registry (ECR) is a fully managed container registry that stores, manages, and deploys Docker container images.

* Action:Store the Docker images in an ECR repository.

* Why:Storing Docker images in ECR ensures that Docker images can be reused across multiple builds, improving build performance by avoiding the need to rebuild the images from scratch.

問題 #254

A company is reviewing its IAM policies. One policy written by the DevOps engineer has been flagged as too permissive. The policy is used by an AWS Lambda function that issues a stop command to Amazon EC2 instances tagged with Environment: NonProduction over the weekend. The current policy is:

```
{  
  "Version": "2012-10-17",  
  "Statement": [  
    {  
      "Effect": "Allow",  
      "Action": "ec2:*",  
      "Resource": "*"  
    }  
  ]  
}
```

What changes should the engineer make to achieve a policy of least permission? (Select THREE.)

Add the following conditional expression:

```
"Condition": {  
  "StringEquals": {  
    "ec2:ResourceTag/Environment": "NonProduction"  
  }  
}
```

• A.

A. Add the following conditional expression:

```
"Condition": {  
  "StringEquals": {  
    "aws:principalType": "lambda.amazonaws.com"  
  }  
}
```

• B.

Change "Resource": "*" to "Resource": "arn:aws:ec2:*:instance/*"

• C.

Add the following conditional expression:

```
"Condition": {  
  "DateGreaterThan": {  
    "aws:CurrentTime": "$ {aws:DateTime:Friday}"  
  },  
  "DateLessThan": {  
    "aws:CurrentTime": "$ {aws:DateTime:Monday}"  
  }  
}
```

• D.

Change "Action": "ec2:*" to "Action": "ec2:StopInstances"

• E.

Add the following conditional expression:

```
  "Condition": {  
    "StringNotEquals": {  
      "ec2:ResourceTag/Environment": "Production"  
    }  
  }
```

- F.

答案：A,B,C

解題說明：

The engineer should make the following changes to achieve a policy of least permission:

A: Add a condition to ensure that the principal making the request is an AWS Lambda function. This ensures that only Lambda functions can execute this policy.

B: Narrow down the resources by specifying the ARN of EC2 instances instead of allowing all resources. This ensures that the policy only affects EC2 instances.

D: Add a condition to ensure that this policy only applies to EC2 instances tagged with "Environment: NonProduction". This ensures that production environments are not affected by this policy.

問題 #255

A DevOps engineer is building a multistage pipeline with AWS CodePipeline to build, verify, stage, test, and deploy an application. A manual approval stage is required between the test stage and the deploy stage. The development team uses a custom chat tool with webhook support that requires near-real-time notifications.

How should the DevOps engineer configure status updates for pipeline activity and approval requests to post to the chat tool?

- A. Create an Amazon EventBridge rule that filters on CodePipeline Pipeline Execution State Change. Publish the events to an Amazon Simple Notification Service (Amazon SNS) topic. Create an AWS Lambda function that sends event details to the chat webhook URL. Subscribe the function to the SNS topic.
- B. Create an AWS Lambda function that is invoked by AWS CloudTrail events. When a CodePipeline Pipeline Execution State Change event is detected, send the event details to the chat webhook URL.
- C. Modify the pipeline code to send the event details to the chat webhook URL at the end of each stage. Parameterize the URL so that each pipeline can send to a different URL based on the pipeline environment.
- D. Create an Amazon CloudWatch Logs subscription that filters on CodePipeline Pipeline Execution State Change. Publish subscription events to an Amazon Simple Notification Service (Amazon SNS) topic. Subscribe the chat webhook URL to the SNS topic, and complete the subscription validation.

答案：A

問題 #256

A company uses AWS Organizations and AWS Control Tower to manage all the company's AWS accounts. The company uses the Enterprise Support plan.

A DevOps engineer is using Account Factory for Terraform (AFT) to provision new accounts. When new accounts are provisioned, the DevOps engineer notices that the support plan for the new accounts is set to the Basic Support plan. The DevOps engineer needs to implement a solution to provision the new accounts with the Enterprise Support plan.

Which solution will meet these requirements?

- A. Use an AWS Config conformance pack to deploy the account-part-of-organizations AWS Config rule and to automatically remediate any noncompliant accounts.
- B. Add an additional value to the control_tower_parameters input to set the AWSEEnterpriseSupport parameter as the organization's management account number.
- C. Set the `aft_feature_enterprise_support` feature flag to True in the AFT deployment input configuration. Redeploy AFT and apply the changes.
- D. Create an AWS Lambda function to create a ticket for AWS Support to add the account to the Enterprise Support plan.

Grant the Lambda function the support:ResolveCase permission.

答案: C

解題說明:

AWS Organizations is a service that helps to manage multiple AWS accounts. AWS Control Tower is a service that makes it easy to set up and govern secure, compliant multi-account AWS environments. Account Factory for Terraform (AFT) is an AWS Control Tower feature that provisions new accounts using Terraform templates. To provision new accounts with the Enterprise Support plan, the DevOps engineer can set the aft_feature_enterprise_support feature flag to True in the AFT deployment input configuration. This flag enables the Enterprise Support plan for newly provisioned accounts.

<https://docs.aws.amazon.com/controlltower/latest/userguide/aft-feature-options.html>

問題 #257

A company has enabled all features for its organization in AWS Organizations. The organization contains 10 AWS accounts. The company has turned on AWS CloudTrail in all the accounts. The company expects the number of AWS accounts in the organization to increase to 500 during the next year. The company plans to use multiple OUs for these accounts.

The company has enabled AWS Config in each existing AWS account in the organization. A DevOps engineer must implement a solution that enables AWS Config automatically for all future AWS accounts that are created in the organization.

Which solution will meet this requirement?

- A. In the organization's management account, create an Amazon EventBridge rule that reacts to a CreateAccount API call. Configure the rule to invoke an AWS Systems Manager Automation runbook to enable AWS Config for the account.
- B. In the organization's management account, create an SCP that allows the appropriate AWS Config API calls to enable AWS Config. Apply the SCP to the root-level OU.
- C. In the organization's management account, create an AWS CloudFormation stack set to enable AWS Config. Configure the stack set to deploy automatically when an account is created through Organizations.
- D. In the organization's management account, create an Amazon EventBridge rule that reacts to a CreateAccount API call. Configure the rule to invoke an AWS Lambda function that enables trusted access to AWS Config for the organization.

答案: C
