Salesforce OmniStudio-Consultant certification exam is designed for individuals who possess knowledge and skills in implementing

and managing Salesforce's OmniStudio platform. Salesforce Certified OmniStudio Consultant certification validates the candidate's ability to design, configure, and customize the Salesforce platform to meet the unique needs of their organization. OmniStudio-Consultant Exam is intended for consultants, architects, and developers who have experience with Salesforce's OmniStudio and are looking to enhance their skills and demonstrate their expertise to potential employers.

Salesforce Certified OmniStudio Consultant Sample Questions (Q10-Q15):

NEW QUESTION # 10

Which two functions can be performed by DataRaptors?

Choose 2 answers

- A. Read and write data to Salesforce
- B. Transform data
- C. Read and write data to external systems
- D. Combine requests into a single response

Answer: A,B

Explanation:

Explanation

DataRaptors are OmniStudio data tools that can perform various functions on data, such as reading, writing, transforming, and validating. They can work with Salesforce data and external data sources. The two functions that can be performed by DataRaptors are:

Transform data: DataRaptors can use transformation rules to manipulate data, such as changing the format, applying calculations, mapping values, etc.

Read and write data to Salesforce: DataRaptors can use SOQL or SOSL queries to read data from Salesforce objects and fields, and use DML operations to insert, update, delete, or upsert data to Salesforce.

The functions that cannot be performed by DataRaptors are:

Combine requests into a single response: DataRaptors cannot aggregate multiple requests from different sources into one response.

This can be done using Integration Procedures, which can orchestrate multiple DataRaptors or REST calls into a single process.

Read and write data to external systems: DataRaptors cannot directly access external systems or APIs.

They need to use Integration Procedures or REST elements to invoke external services and pass the data to or from DataRaptors.

NEW QUESTION # 11

Which three functions are performed by Action elements in OmniScript?

Choose 3 answers

- A. Organize data into multiple pages
- B. Get and update data in Salesforce
- C. Get and update data through APIs
- D. Send DocuSign emails for signature
- E. Display error messages to the user

Answer: B,C,D

Explanation:

The three functions that are performed by Action elements in OmniScript are get and update data through APIs, send DocuSign emails for signature, and get and update data in Salesforce. Action elements are used to perform various operations on data within an OmniScript. Display error messages to the user is not a function of Action elements, but of Error elements. Organize data into multiple pages is not a function of Action elements, but of Page elements.

NEW QUESTION # 12

A company wants to create a new customer buying journey for their website. The buying journey should include the following functionality:

- * Allow the user to enter contact and address information
- * Require the user to enter age, gender, and optionally income bracket
- * Compute a discount percentage per product based on the customer data provided
- * Save the list of suggested products including discounts

Which three OmniStudio tools should the consultant use to design a solution that meets these requirements? Choose 3 answers

- A. OmniStudio Action
- B. Calculation Procedures and Matrices
- C. FlexCard
- D. Integration Procedures
- E. OmniScript

Answer: A,B,E

Explanation:

Explanation

The correct OmniStudio tools to design a solution that meets these requirements are OmniScript, Calculation Procedures and Matrices, and OmniStudio Action. OmniScript can be used to create a user interface for capturing customer information and displaying suggested products. Calculation Procedures and Matrices can be used to compute the discount percentage per product based on the customer data provided. OmniStudio Action can be used to save the list of suggested products including discounts to Salesforce or an external system. Integration Procedures are not needed for this scenario, as there is no data integration involved. FlexCard is not relevant for this scenario, as it is used to display contextual data on record pages.

NEW QUESTION # 13

A project requires a simple, single-object query with no complex data transformation.

What is best practice for selecting the Data Mapper type?

- A. Implement a Load to perform the single-object data fetch.
- B. Utilize a Turbo Extract to minimize processing overhead.
- C. Configure a Transform to retrieve and restructure the record.
- D. Deploy a standard Extract to maintain architectural consistency.

Answer: B

Explanation:

Data Mapper Turbo Extract is optimized for retrieving data from a single Salesforce object with minimal configuration and maximum runtime efficiency. When the requirement involves a straightforward query without formulas, complex mappings, or transformations, Turbo Extract is preferred because it has lower processing overhead than a standard Extract. A Data Mapper Load is used for writing data to Salesforce, not reading it. A Transform is intended for restructuring or manipulating data and is unnecessary in this scenario.

While a standard Extract would work, it introduces capabilities that are not needed and may reduce performance compared to Turbo Extract. Salesforce documentation highlights Turbo Extract as the preferred option for simple single-object retrieval use cases where speed and efficiency are important.

NEW QUESTION # 14

Which three of the following are functions of a Text Block element in OmniScript?

Choose 3 answers

- A. Error conditions
- B. User input fields
- C. Text formatting
- D. Links or images
- E. Table formatting

Answer: C,D,E

Explanation:

Explanation

A Text Block element in OmniScript can perform three functions: display links or images, apply text formatting, and format tables. A Text Block element can use HTML tags to create hyperlinks or embed images in the OmniScript. It can also use CSS properties to style the text, such as font size, color, alignment, etc. Additionally, a Text Block element can use HTML table tags to create and format tables in the OmniScript.
