XSOAR-Engineer Authorized Certification - XSOAR-Engineer Free Braindumps

How you can gain the XSOAR-Engineer certification with ease in the least time? The answer is our XSOAR-Engineer study materials for we have engaged in this field for over ten years and we have become the professional standard over all the exam materials. You can free download the demos which are part of our XSOAR-Engineer Exam Braindumps, you will find that how good they are for our professionals devote of themselves on compiling and updating the most accurate content of our XSOAR-Engineer exam questions.

Palo Alto Networks XSOAR Engineer Sample Questions (Q83-Q88):

NEW QUESTION # 83

An engineer creates a script to display data in markdown format for a layout. When configuring the layout, the new script is not listed.

Which missed configuration step will cause this behavior?.

- A. Using a markdown output type.
- B. Ensuring the script has the necessary permissions.
- C. Adding the snippet as an integration command.
- **D. Tagging the script with Dynamic Section.**

Answer: D

Explanation:

The XSOAR Layouts documentation states that scripts can appear inside incident layouts only when they are designated as Dynamic Section scripts. Dynamic Sections are special script types that run automatically within layouts to display enrichment data, contextual summaries, or markdown-rendered information.

When creating such a script, the developer must mark it with the "dynamic-section" tag; otherwise, XSOAR does not expose it as an option during layout configuration. Without this mandatory tag, the script is treated as an ordinary automation and therefore cannot be placed into layout components.

Permissions (option B) affect script execution but do not prevent it from appearing in the layout editor.

Integration commands (option C) are unrelated-dynamic sections do not use integration command definitions. Markdown output type (option D) determines formatting only and does not affect whether the script is selectable within the layout editor.

Thus, the missing configuration step is failing to tag the script as a Dynamic Section, making option A the correct answer according to the official XSOAR documentation.

NEW QUESTION # 84

In Cortex XSOAR multi tenant setup, when content from a development server is pushed to the remote repository, where in the production server can the updates be found?

- **A. Tenants**
- B. Marketplace
- C. Agent tools
- D. Main Account

Answer: A

Explanation:

NEW QUESTION # 85

In a Dev/Prod deployment model, what is available only in the development tenant?.

- A. Content Repository page.
- **B. "Export all custom content" feature.**
- C. Marketplace.
- D. Custom integration instances.

Answer: B

Explanation:

In Cortex XSOAR's documented Dev/Prod deployment model, the development tenant is designed to be the workspace where engineers create, modify, test, and validate content before promoting it into production. As part of this workflow, the development tenant includes the "Export all custom content" feature, which generates a structured content bundle containing custom playbooks, integrations, fields, layouts, lists, and other artifacts. This bundle is then imported into the production tenant to ensure controlled, versioned, and tested promotion of content.

The Admin Guide highlights that this export capability is restricted to the development environment to preserve the integrity and stability of the production tenant. Production systems are intentionally limited, allowing only the import (not export) of custom content to prevent accidental overwriting, drift, or unintended modifications.

Marketplace access (A) exists in both tenants. Custom integration instances (C) can be created in either tenant. The Content Repository page (B) is also available across both environments. Therefore, the only feature exclusive to the development tenant is D: "Export all custom content." This ensures a safe, repeatable Dev#Prod promotion model aligned with enterprise change-control requirements.

NEW QUESTION # 86

Reliability scores in XSOAR range from A through F. What do A and F stand for?

- A. F - Reliability cannot be judged, A - Completely Reliable
- **B. F - Unreliable, A - Completely Reliable**
- C. F - Not usually reliable, A - Fairly Reliable
- D. F - Not reliable, A - Usually Reliable

Answer: B

NEW QUESTION # 87

A SOC analyst needs to retrieve the list of all open phishing incidents in the last 30 days. What is the correct query to use?

- A. `-status:closed -category:job type:Phishing created:>="30 days ago"`
- **B. `-status:closed -category:jobandtype:Phishing created:<="30 days ago"`**
- C. `-status:closed -category:job type:Phishing created:="30 days ago"`
- D. `status:closed -category:jobandtype:Phishing created:>="30 days ago"`

Answer: B

NEW QUESTION # 88

.....

Do you want your IT capability to be most authoritatively recognized? One of the best method is to pass the XSOAR-Engineer certification exam. The XSOAR-Engineer exam software designed by our Itexamguide will help you master XSOAR-Engineer Exam skills. Besides, abundant materials, user-friendly design and one-year free update after payment are the best favor for you to pass XSOAR-Engineer exam.
