

# Latest Upload SAP Valid C-BCSBS-2502 Exam Dumps: SAP Certified Associate - Positioning SAP Business Suite & Real C-BCSBS-2502 Braindumps

What's more, part of that BraindumpStudy C-BCSBS-2502 dumps now are free: <https://drive.google.com/open?id=1XzvczAarXuDrKaepPrzB4z7CdNuUm7ZK>

The C-BCSBS-2502 exam study guide includes the latest C-BCSBS-2502 PDF test questions and practice test software which can help you to pass the C-BCSBS-2502 test smoothly. The test questions cover the practical questions in the test C-BCSBS-2502 certification and these possible questions help you explore varied types of questions which may appear in the C-BCSBS-2502 test and the approaches you should adapt to answer the questions. Every C-BCSBS-2502 exam question is covered in our C-BCSBS-2502 learning braindump. You will get the C-BCSBS-2502 certification for sure with our C-BCSBS-2502 training guide.

The C-BCSBS-2502 learning dumps from our company are very convenient for all people, including the convenient buying process, the download way and the study process and so on. Upon completion of your payment, you will receive the email from us in several minutes, and then you will have the right to use the SAP Certified Associate - Positioning SAP Business Suite test guide from our company. In addition, there are three different versions for all people to choose. According to your actual situation, you can choose the suitable version from our C-BCSBS-2502 study question. We believe that the suitable version will help you improve your learning efficiency. It will be very easy for you to pass the exam and get the certification. More importantly, you will spend less time on preparing for C-BCSBS-2502 exam than other people.

>> **Valid C-BCSBS-2502 Exam Dumps** <<

## **Pass Guaranteed Quiz 2026 SAP C-BCSBS-2502: Valid Valid SAP Certified Associate - Positioning SAP Business Suite Exam Dumps**

These C-BCSBS-2502 exam question formats contain real, valid, and updated SAP C-BCSBS-2502 exam questions that will assist you in SAP SAP Certified Associate - Positioning SAP Business Suite exam preparation and enable you to pass the challenging SAP C-BCSBS-2502 Exam with good scores. The SAP C-BCSBS-2502 questions are prepared by highly experienced professionals and, thus, are kept to the point and concise.

## SAP C-BCSBS-2502 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Positioning SAP Business Data Cloud: This section of the exam measures the skills of Enterprise Architects and covers the positioning and strategic use of SAP Business Data Cloud. It involves understanding how data from various sources is managed, governed, and accessed to support intelligent business operations. The section aims to equip professionals with the ability to explain data unification and connectivity through SAP's cloud-based data platform.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Positioning SAP Business Suite: This section of the exam measures the skills of Solution Consultants and covers how to effectively position the SAP Business Suite within various business scenarios. It includes understanding the core value, capabilities, and strategic advantages of SAP's integrated business applications. The focus is on enabling consultants to align SAP Business Suite offerings with customer needs to support end-to-end processes.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Discovering SAP Business AI: This section of the exam measures the skills of Digital Transformation Specialists and focuses on exploring how SAP Business AI enables smarter decision-making. It includes identifying AI-driven features embedded within SAP solutions and how they contribute to automation, predictions, and enhanced business outcomes. Professionals are expected to understand how to promote AI adoption in business processes using SAP's intelligent technologies.</li> </ul>

## SAP Certified Associate - Positioning SAP Business Suite Sample Questions (Q19-Q24):

### NEW QUESTION # 19

Which of the following are RISE with SAP journeys? Note: There are 2 correct answers to this question.

- A. An ERP transformation to private cloud
- B. New customers move to the public cloud
- C. A hybrid two-tier approach
- D. Greenfield ERP implementation on Public Cloud

**Answer: A,C**

Explanation:

RISE with SAP is a guided transformation journey designed for existing SAP ERP customers to modernize their business processes and transition to a cloud ERP landscape, primarily focusing on SAP S/4HANA Cloud Private Edition. It is tailored for organizations with complex, customized on-premises systems, allowing them to move to the cloud at their own pace while preserving existing investments. The question asks which options represent RISE with SAP journeys, with two correct answers. Below, each option is evaluated based on official SAP documentation from sources such as SAP Learning, SAP.com, and related materials.

\* Option A: Greenfield ERP implementation on Public Cloud A greenfield ERP implementation involves a new, clean implementation of an ERP system without carrying over existing customizations or data.

While SAP S/4HANA Cloud Public Edition supports greenfield implementations, these are primarily associated with the GROW with SAP journey, which targets new SAP customers or midsize companies adopting standardized, best-practice processes for rapid deployment. RISE with SAP, however, is designed for existing SAP ERP customers transitioning from on-premises systems, often involving complex landscapes and customizations. The public cloud (SAP S/4HANA Cloud Public Edition) is not the primary focus of RISE with SAP, which emphasizes the private cloud (SAP S/4HANA Cloud Private Edition) for such customers.

Therefore, a greenfield implementation on the public cloud aligns more with GROW with SAP, not RISE with SAP. Extract: "For new customers, the GROW with SAP journey accelerates and streamlines the cloud transformation with a customized methodology to quickly implement and benefit from cloud ERP. ... SAP S/4HANA Cloud Public Edition is always implemented in a greenfield (new implementation) scenario." learning.sap.com Extract: "RISE with SAP is tailored to enable an easy transition to cloud ERP at a pace comfortable for the customer. Existing customers often require a higher degree of customization in their processes, prefer to innovate at their own pace, and need more control over their solution. These characteristics align with SAP S/4HANA Cloud Private Edition." learning.sap.com This option is incorrect.

\* Option B: An ERP transformation to private cloud RISE with SAP is explicitly designed to support ERP transformations from on-premises SAP ERP systems (e.g., SAP ECC or on-premises SAP S/4HANA) to SAP S/4HANA Cloud Private Edition, which operates in a private cloud environment. This journey accommodates both greenfield (new implementation) and brownfield (system conversion) scenarios, allowing customers to maintain existing customizations and business processes while leveraging cloud benefits

like scalability, AI, and continuous innovation. The private cloud focus is a hallmark of RISE with SAP, making this option a core component of its transformation journeys. Extract: "RISE with SAP is a comprehensive offering that helps companies run their business in the cloud. At the heart of this comprehensive offering is SAP S/4HANA Cloud Private Edition, an intelligent cloud ERP solution powered by AI designed for customers currently running SAP ERP and/or on-premise SAP S/4HANA." blog.sap-press.com Extract: "A private cloud deployment is recommended if a customer has plans for a long-term evolutionary journey to the cloud with high landscape complexity including mostly fragmented, highly customized systems. ... The private cloud deployment can be a new implementation, but also supports system conversion from an existing SAP ERP on-premise system." learning.sap.com This option is correct.

\* Option C: New customers move to the public cloud New customers moving to the public cloud typically align with the GROW with SAP journey, which is designed for organizations (often midsize or new to SAP) seeking a rapid, standardized implementation of SAP S/4HANA Cloud Public Edition. GROW with SAP emphasizes quick time-to-value with preconfigured best practices and minimal customization, targeting customers without prior SAP investments. In contrast, RISE with SAP targets existing SAP customers with on-premises ERP systems, focusing on complex transformations to the private cloud. While RISE with SAP could theoretically include public cloud components in specific scenarios, its primary focus is not new customers or the public cloud. Extract: "GROW with SAP is a SAP software solution initiative designed exclusively for mid-size companies and initial SAP customers. SAP S/4HANA Cloud + Public Edition - built on top of SAP's own HANA Cloud infrastructure, optimized for fast roll-out and quick time-to-value." unecops.com Extract: "RISE with SAP is an ERP adoption solution that helps current SAP ecosystem users transition traditional ERP information and processes to a cloud system without compromising or putting your data at risk." blog.nbs-us.com This option is incorrect.

nbs-us.com This option is incorrect.

\* Option D: A hybrid two-tier approach A hybrid two-tier ERP approach involves using a combination of SAP S/4HANA Cloud Public Edition and Private Edition, often across different parts of an organization (e.g., headquarters vs. subsidiaries). RISE with SAP supports such configurations, particularly for existing SAP customers with complex landscapes who may implement a private cloud solution (via SAP S/4HANA Cloud Private Edition) for core operations while using the public cloud for standardized processes in specific areas. This approach allows flexibility and scalability, aligning with RISE with SAP's tailored transformation framework. The documentation explicitly mentions support for two-tier ERP scenarios under RISE with SAP, making this a valid journey. Extract: "It's also common for customers to implement both SAP S/4HANA Cloud Public and Private Edition in a two-tier ERP scenario." learning.sap.com Extract: "RISE with SAP is tailored to a customer's existing landscape and business requirements, and umfasst ein standardisiertes Framework, integrierte Tools und fachkundige Beratung bei jedem Schritt - nach einer bewährten Methodik, die sowohl die Transformation als auch die Wertschöpfung beschleunigt." (Translated: "RISE with SAP is tailored to a customer's existing landscape and business requirements, and includes a standardized framework, integrated tools, and expert guidance at every step - following a proven methodology that accelerates both transformation and value creation.") sap.com This option is correct.

Summary of Correct Answers:

\* B: RISE with SAP supports ERP transformations to the private cloud, primarily through SAP S/4HANA Cloud Private Edition, accommodating both greenfield and brownfield scenarios for existing SAP customers.

\* D: RISE with SAP enables a hybrid two-tier approach, combining private and public cloud editions to meet diverse organizational needs, as part of its flexible transformation framework.

## NEW QUESTION # 20

What are the key marketing messages of SAP Business Data Cloud? Note: There are 3 correct answers to this question.

- A. Connect all data
- B. Unleash transformative insights
- C. Foster reliable AI
- D. Unleash AI-powered insights
- E. Connect SAP data

**Answer: A,B,C**

Explanation:

SAP Business Data Cloud (BDC) is a Software-as-a-Service (SaaS) solution designed to unify and harmonize data from SAP and non-SAP sources, enabling organizations to achieve advanced analytics, actionable insights, and reliable AI-driven outcomes. The

question asks for the key marketing messages of SAP BDC, with three correct answers. Below, each option is evaluated based on official SAP documentation and marketing materials, including SAP.com, SAP Learning, and web sources from the provided search results, which align with the "Positioning SAP Business Data Cloud" narrative.

\* Option A: Connect SAP data While SAP BDC does connect SAP data as part of its functionality, this is not a primary marketing message. The platform's broader value proposition emphasizes connecting all data (SAP and non-SAP) to create a unified semantic layer, rather than focusing solely on SAP data.

Marketing messages highlight the ability to harmonize mission-critical data across diverse sources, not just SAP-specific data. The documentation and promotional materials consistently stress the integration of both SAP and third-party data to drive insights and AI, making this option too narrow to be a key marketing message. Extract: "SAP Business Data Cloud is a fully managed SaaS solution that unifies and governs all SAP data and seamlessly connects with third-party data-giving line-of-business leaders context to make even more impactful decisions." This option is incorrect.

\* Option B: Unleash transformative insights A central marketing message of SAP BDC is its ability to "unleash transformative insights" by delivering prebuilt analytical applications and harmonized data that empower decision-making across finance, HR, operations, and other business functions. This message is prominently featured in SAP's promotional materials, including e-books and web pages, which emphasize how the platform enables organizations to gain actionable, real-time insights to transform business processes and outcomes. The phrase "unleash transformative insights" is explicitly used in marketing content, aligning with the platform's value proposition. Extract: "In this SAP e-book, discover the benefits of SAP Business Data Cloud, a fully managed cloud solution that unifies data and analytics with semantically rich data from your key business processes. Explore key use cases for HR, finance, and operations and learn how you can unleash transformative business insights, connect all your data, and foster reliable AI in your organisation." Extract: "Learn how SAP Business Data Cloud unifies data and business analytics with semantically rich data. ... Deliver transformational insights for advanced analytics and planning with prebuilt applications across all lines of business." This option is correct.

\* Option C: Unleash AI-powered insights While SAP BDC leverages AI to deliver insights, the specific phrase "unleash AI-powered insights" is not a primary marketing message in the official SAP documentation or promotional materials. The platform's AI capabilities are framed under broader messages like "foster reliable AI" or delivering "transformative insights" through AI-powered applications. The marketing focus is on the reliability and integration of AI within business processes, rather than solely emphasizing AI-powered insights as a standalone message. The documentation highlights AI as a tool to enhance insights, but the exact phrasing of this option does not match the key marketing messages. Extract: "Automate, adapt, and learn in real time with AI-powered applications that understand your business. ... Choose from a breadth of AI and machine learning capabilities that are fueled by trusted business data." This option is incorrect.

\* Option D: Foster reliable AI Fostering reliable AI is a key marketing message for SAP BDC, emphasizing the platform's ability to provide a trusted data foundation for generative AI that is relevant, responsible, and reliable. This message is critical in addressing customer challenges with AI adoption, such as poor data quality and integration issues, which SAP BDC resolves through its unified data layer and integration with tools like SAP Databricks. The phrase "foster reliable AI" is explicitly used in SAP's marketing materials, highlighting how the platform ensures AI outputs are trustworthy and business-ready. Extract: "In this SAP e-book, discover the benefits of SAP Business Data Cloud, a fully managed cloud solution that unifies data and analytics with semantically rich data from your key business processes. Explore key use cases for HR, finance, and operations and learn how you can unleash transformative business insights, connect all your data, and foster reliable AI in your organisation." Extract: "Foster reliable AI: Ensure data across applications and operations has a foundation for generative AI that is reliable, responsible, and relevant." This option is correct.

\* Option E: Connect all data Connecting all data, including SAP and non-SAP sources, is a cornerstone marketing message for SAP BDC. The platform is promoted as a solution that harmonizes mission-critical data across an open data ecosystem, leveraging a powerful semantic layer to provide comprehensive business insights. This message underscores the platform's ability to break down data silos and integrate diverse data sources, enabling advanced analytics and AI. The phrase "connect all your data" is explicitly used in SAP's marketing content, making it a key message. Extract: "In this SAP e-book, discover the benefits of SAP Business Data Cloud, a fully managed cloud solution that unifies data and analytics with semantically rich data from your key business processes. Explore key use cases for HR, finance, and operations and learn how you can unleash transformative business insights, connect all your data, and foster reliable AI in your organisation." Extract: "Connect all your data:

Harmonize all your mission-critical data with an open data ecosystem, leveraging a powerful semantic layer to give you an unmatched knowledge of your business." This option is correct.

Summary of Correct Answers:

\* B: "Unleash transformative insights" highlights SAP BDC's ability to deliver actionable, real-time insights through prebuilt applications, transforming business decision-making.

\* D: "Foster reliable AI" emphasizes the platform's trusted data foundation for reliable, responsible, and relevant AI outcomes.

\* E: "Connect all data" underscores the platform's capability to harmonize SAP and non-SAP data, enabling a unified data ecosystem for analytics and AI.

### NEW QUESTION # 21

What are some components of SAP Business AI?

Note: There are 3 correct answers to this question.

- A. Customer centricity
- B. Technology foundation
- C. Agility
- D. Enterprise data
- E. Processes

**Answer: B,D,E**

Explanation:

The question asks for the components of SAP Business AI, which is a key pillar of SAP Business Suite that enables intelligent business processes through artificial intelligence. According to official SAP documentation, SAP Business AI is built on three core components: relevant business processes, enterprise data, and a technology foundation. These align with Options A, D, and E, making them the correct answers.

Explanation of Correct Answers:

Option A: Processes

This is correct because SAP Business AI is deeply embedded in business processes to deliver outcome-driven AI capabilities. SAP emphasizes that AI is integrated into end-to-end business processes (e.g., finance, supply chain, procurement) to enhance efficiency, automation, and decision-making. The Positioning SAP Business Suite documentation on [learning.sap.com](https://learning.sap.com) states:

"SAP Business AI is designed to deliver value by embedding AI into relevant business processes. This ensures that AI capabilities are context-aware and drive specific business outcomes, such as optimizing supply chain operations or automating financial reconciliations." For example, SAP Joule, the generative AI copilot, is integrated into processes across SAP S/4HANA Cloud and other SAP applications to provide real-time insights and recommendations. The documentation further notes:

"The process component of SAP Business AI refers to the integration of AI into core business workflows, enabling intelligent automation and process optimization." This confirms that processes are a foundational component of SAP Business AI.

Option D: Enterprise data

This is correct because SAP Business AI relies on enterprise data to train and execute AI models effectively.

SAP emphasizes the importance of harmonized, high-quality data from SAP and third-party sources, managed through solutions like SAP Datasphere, to power AI-driven insights. The documentation states:

"Enterprise data is a critical component of SAP Business AI, providing the foundation for training and deploying AI models. SAP Business AI leverages data from SAP applications, such as SAP S/4HANA, and external sources to deliver accurate and contextually relevant outcomes." For instance, SAP Business AI uses enterprise data to enable predictive analytics, anomaly detection, and personalized recommendations. The integration with SAP Business Data Cloud ensures that data is accessible and governed, supporting AI use cases. The documentation further clarifies:

"SAP Business AI is powered by enterprise data, harmonized through SAP Datasphere, to ensure that AI models are built on a trusted and unified data foundation." This establishes enterprise data as a core component.

Option E: Technology foundation

This is correct because SAP Business AI is underpinned by a robust technology foundation, including the SAP Business Technology Platform (BTP), which provides tools for AI development, deployment, and integration.

This foundation includes AI services, machine learning frameworks, and infrastructure for scalability. The documentation notes:

"The technology foundation of SAP Business AI, built on SAP Business Technology Platform (BTP), provides the infrastructure and tools needed to develop, deploy, and manage AI models. This includes prebuilt AI services, integration capabilities, and support for generative AI." For example, SAP BTP enables the integration of SAP Joule and other AI capabilities into SAP applications, while also supporting custom AI development through tools like the SAP AI Core. The documentation adds:

"SAP Business AI's technology foundation ensures scalability, security, and seamless integration with SAP and non-SAP systems, enabling customers to innovate with AI." This confirms that technology foundation is a key component.

Explanation of Incorrect Answers:

Option B: Agility

This is incorrect because agility is not a component of SAP Business AI. While agility may be an outcome or benefit of using SAP Business AI (e.g., enabling faster decision-making or adaptable processes), it is not a structural component. The documentation does not list agility as part of the core framework of SAP Business AI.

Instead, it focuses on processes, data, and technology:

"SAP Business AI comprises three main components: relevant business processes, enterprise data, and a technology foundation.

These elements work together to deliver intelligent business outcomes." Agility may be associated with the broader value proposition of SAP Business Suite or cloud ERP, but it is not specific to SAP Business AI.

Option C: Customer centricity

This is incorrect because customer centricity is not a component of SAP Business AI. While SAP Business AI can support customer-centric outcomes (e.g., personalized experiences through AI-driven insights), it is not a foundational component. The documentation emphasizes technical and operational components rather than strategic principles like customer centricity:

"SAP Business AI is built on a foundation of processes, data, and technology, enabling intelligent automation and insights across the enterprise." Customer centricity may be a guiding principle in SAP's go-to-market strategy or solution design, but it is not part of the SAP Business AI framework.

Summary:

SAP Business AI is composed of three core components: processes (embedding AI into business workflows), enterprise data (providing the data foundation for AI models), and technology foundation (enabling AI development and deployment via SAP BTP). These correspond to Options A, D, and E. Options B (agility) and C (customer centricity) are incorrect, as they represent outcomes or principles rather than structural components of SAP Business AI. This aligns with SAP's focus on delivering context-aware, data-driven, and technically robust AI capabilities within SAP Business Suite.

## NEW QUESTION # 22

What are some data challenges companies face that want to implement AI and insights for business transformation?

Note: There are 3 correct answers to this question.

- A. To harmonize data from multiple SAP applications
- B. To simplify the data landscape
- C. To boost confidence in AI-generated content
- D. To access SAP Line of Business (LOB) data consistently
- E. To integrate third-party applications

**Answer: A,B,D**

Explanation:

The question asks about data challenges companies face when implementing AI and insights for business transformation, particularly in the context of SAP Business Suite. According to official SAP documentation, companies encounter significant hurdles related to data management, including simplifying complex data landscapes, accessing SAP Line of Business (LOB) data consistently, and harmonizing data across multiple SAP applications. These align with Options A, B, and E, making them the correct answers.

Explanation of Correct Answers:

Option A: To simplify the data landscape

This is correct because a complex and fragmented data landscape is a major challenge for companies seeking to implement AI and insights. Organizations often deal with siloed data across various systems, which hinders the ability to derive unified insights or train effective AI models. The Positioning SAP Business Suite documentation on [learning.sap.com](https://learning.sap.com) states:

"One of the top challenges for companies implementing AI and insights is simplifying the data landscape.

Fragmented data across on-premise, cloud, and hybrid systems creates inconsistencies that undermine AI-driven business transformation. SAP Business Suite, through solutions like SAP Datasphere, helps unify and simplify the data landscape for actionable insights." Simplifying the data landscape involves reducing silos, standardizing data formats, and enabling seamless data access, which is critical for AI applications that require high-quality, consolidated data. The documentation further emphasizes:

"A simplified data landscape is foundational for AI and analytics, enabling organizations to leverage SAP Business Suite to drive intelligent, data-driven transformation." This confirms simplifying the data landscape as a key challenge.

Option B: To access SAP Line of Business (LOB) data consistently

This is correct because consistent access to SAP Line of Business (LOB) data (e.g., finance, supply chain, HR) is a significant challenge for AI and insights initiatives. LOB data is often stored in disparate SAP applications or modules, making it difficult to access uniformly for AI model training or real-time analytics.

The documentation notes:

"Companies face challenges in accessing SAP Line of Business data consistently due to the complexity of SAP systems and varying data structures across applications. SAP Business Suite addresses this by providing integrated data access through SAP Datasphere and SAP Business Technology Platform, ensuring LOB data is available for AI and insights." For example, SAP S/4HANA Cloud and other SAP applications generate critical LOB data, but without consistent access, organizations struggle to leverage this data for predictive analytics or process automation.

The documentation adds:

"Consistent access to LOB data is essential for embedding AI into business processes, enabling real-time insights and decision-making." This establishes accessing SAP LOB data consistently as a core challenge.

Option E: To harmonize data from multiple SAP applications

This is correct because harmonizing data from multiple SAP applications (e.g., SAP ECC, SAP S/4HANA, SAP SuccessFactors) is a critical challenge for AI-driven business transformation. Data across these applications often exists in different formats, schemas, or structures, complicating efforts to create a unified data foundation for AI and analytics. The documentation states:

"Harmonizing data from multiple SAP applications is a significant challenge for companies pursuing AI and insights. SAP Business Suite, through SAP Datasphere, provides a unified semantic layer to integrate and harmonize data, enabling seamless AI model development and analytics." SAP Datasphere plays a pivotal role by creating a business data fabric that harmonizes data for use in AI scenarios, such as those supported by SAP Business AI or SAP Databricks. The documentation further clarifies:

"Data harmonization across SAP applications ensures that AI models are trained on accurate, consistent data, driving reliable insights and business transformation." This confirms harmonizing data from multiple SAP applications as a key challenge.

Explanation of Incorrect Answers:

Option C: To integrate third-party applications

This is incorrect because, while integrating third-party applications can be a challenge in some contexts, it is not specifically highlighted as a primary data challenge for implementing AI and insights in the context of SAP Business Suite. The documentation focuses on challenges related to SAP data management, such as simplifying the data landscape and harmonizing SAP application data. While SAP Business Technology Platform (BTP) supports integration with third-party applications, the primary data challenges for AI are internal to SAP systems:

"The key data challenges for AI and insights include simplifying the data landscape, ensuring consistent access to SAP LOB data, and harmonizing data across SAP applications." Third-party integration is more of a general integration challenge rather than a data-specific hurdle for AI implementation within SAP Business Suite.

Option D: To boost confidence in AI-generated content

This is incorrect because boosting confidence in AI-generated content is not a data challenge but rather a trust or governance issue. While ensuring trust in AI outputs is important (e.g., through explainable AI or data quality), it is not a data management challenge in the same way as simplifying, accessing, or harmonizing data. The documentation does not list this as a primary data challenge:

"Data challenges for AI and insights focus on managing complexity, consistency, and harmonization of data within SAP systems, enabling a robust foundation for AI-driven transformation." Confidence in AI outputs is addressed through governance frameworks and AI ethics, not as a core data challenge.

Summary:

Companies implementing AI and insights for business transformation face data challenges, including simplifying the data landscape (to reduce silos and complexity), accessing SAP Line of Business (LOB) data consistently (to enable unified analytics), and harmonizing data from multiple SAP applications (to create a cohesive data foundation). These correspond to Options A, B, and E. Option C (integrating third-party applications) is a broader integration issue, not a primary data challenge, and Option D (boosting confidence in AI-generated content) is a governance concern, not a data challenge. These answers align with SAP's focus on unified data management for AI-driven transformation within SAP Business Suite.

## NEW QUESTION # 23

An organization wants to streamline HR processes, ensure compliance with global regulations, and improve workforce planning. Which SAP solutions should they implement? There are 3 correct answers to this question.

- A. SAP Transportation Management
- B. SAP Fieldglass
- C. SAP SuccessFactors Compensation
- D. SAP SuccessFactors Employee Central
- E. SAP Workforce Analytics

**Answer: C,D,E**
