HPE Aruba Networking Switching Professional Exam Sample Questions (Q109-Q114):

NEW QUESTION # 109

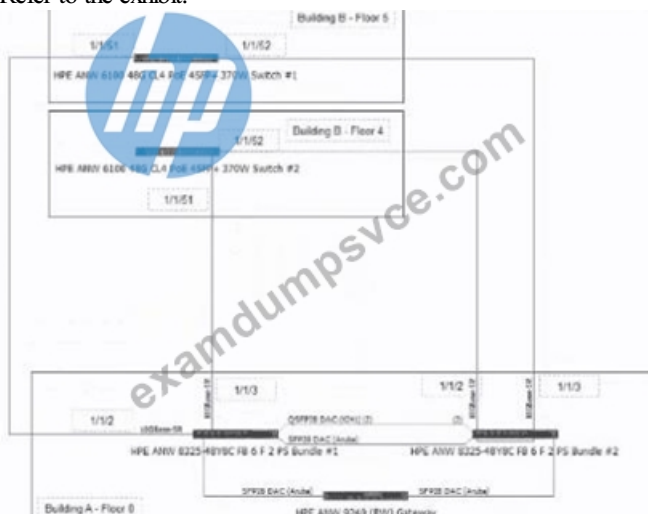

An administrator wants to track what configuration changes were made on a switch.
What should the administrator implement to see the configuration changes on an AOS-CX switch?

- A. Network Analysis Engine (NAE)
- B. AAA authentication
- C. AAA authorization
- D. VSX synchronization logging

Answer: A

NEW QUESTION # 110

Refer to the exhibit:

The customer would like to utilize Dynamic Segmentation for wired users in Building B. Which statement is true about the scenario?

- A. The CX 6100 switches need to have the CX Advanced license applied to support the requirement.

- B. The CX 6100 switches need to have a GRE tunnel to the HPE Aruba Networking 9200.
- **C. The CX 6100 switches would need to be replaced with CX 6300 models.**
- D. The CX 6100 switches need to have a static VXLAN tunnel to the HPE Aruba Networking CX 8325.

Answer: C

Explanation:

Dynamic Segmentation (DS) requires certain capabilities on the switches to support user role assignment and traffic segmentation based on identity. The CX 6100 series switches do not support Dynamic Segmentation due to hardware and feature limitations. Therefore, they must be replaced with CX 6300 models, which support DS features natively. Options involving GRE tunnels or VXLAN tunnels relate to traffic forwarding but do not enable DS on unsupported hardware. Applying licenses does not upgrade hardware capabilities for DS.

- A. Disable BPDUs filter.
- **B. Disable BPDUs guard.**
- C. Disable MSTP guard
- D. Disable loop protect.

Answer: B

Explanation:
