6V0-22.25 Formal Test, 6V0-22.25 Minimum Pass Score

Our 6V0-22.25 study quiz is made from various experts for examination situation in recent years in the field of systematic analysis of finishing, meet the demand of the students as much as possible, at the same time have a professional staff to check and review 6V0-22.25 practice materials, made the learning of the students enjoy the information of high quality. Due to the variety of examinations, the 6V0-22.25 Study Materials are also summarized for different kinds of learning materials, so that students can find the information on 6V0-22.25 guide torrent they need quickly.

VMware Avi Load Balancer 30.x Administrator Sample Questions (Q25-Q30):

NEW QUESTION # 25

A Security Administrator enables a WAF policy in 'Detection' mode on a production Virtual Service. What is the primary difference in the logs for a request that matches a WAF signature, compared to if the policy were in 'Enforcement' mode?

WAF Log Snippet (Detection Mode)

WAF-Status: "Detection"

WAF-Rule-Match: "CRS-942100-SQL-Injection"

Action-Taken: "Log"

- A. In 'Detection' mode, the log is generated, but the client request is still allowed to proceed to the backend server.
- B. In 'Detection' mode, the log contains the client IP but omits the URI to save space.
- C. In 'Detection' mode, the log entry is classified as "Non-Significant".

- D. In 'Detection' mode, no log is generated for the matching request.

Answer: A

NEW QUESTION # 26

An administrator wants to view only the logs related to system errors, security violations, and poor performance for a virtual service. Which filter preset should be used in the Virtual Service Logs view to achieve this most efficiently?

- A. Show All Logs
- B. Show All Headers
- C. Show Significant Logs
- D. Show Non-Significant Logs

Answer: C

NEW QUESTION # 27

A vSphere Administrator is tasked with deploying a new Avi Controller OVA into the vCenter environment. Which file format should the administrator look for to begin the deployment?

- A. .ISO
- B. .VMDK
- C. .VHD
- D. .OVA

Answer: D

NEW QUESTION # 28

An administrator is creating a new Virtual Service to load balance traffic to a pool of web servers.

The administrator wants to use a specific FQDN (e.g., shop.example.com) for the service address instead of an IP address. How can this be achieved during the Virtual Service creation?

Virtual Service Creation Wizard > Step 1

VS Name: vs-shop-prod

Service IP Address: [?]

Application Domain Name: [?]

- A. The FQDN should be entered in the 'Application Domain Name' field, and Avi will automatically handle the DNS registration.
- B. The administrator must first create a DNS record for the FQDN pointing to a free IP, then use that IP as the VIP.
- C. This is not possible; a Virtual Service must be created with an IP address first, then the FQDN can be added later.
- D. The FQDN must be entered into the 'Service IP Address' field.

Answer: A

NEW QUESTION # 29

An administrator needs to implement session persistence for a web application based on a custom cookie named

APP_SESSION_ID. When a client makes its first request, the server sets this cookie. The load balancer must read this cookie in subsequent requests to ensure the client is sent back to the same server. Why is this only possible with an L7 virtual service?

- A. Only L7 virtual services can be deployed in a highly available configuration.
- B. Reading an HTTP cookie requires the Service Engine to parse the application-layer payload.
- C. The APP_SESSION_ID must be manually configured on the L4 Application Profile.
- D. L4 virtual services do not have access to a pool of backend servers.

Answer: B
