You have an option to try the AZ-700 exam dumps demo version and understand the full features before purchasing. You can download the full features of AZ-700 PDF Questions and practice test software right after the payment. FreeCram has created the three best formats of AZ-700 practice questions. These Formats will help you to prepare for and pass the Microsoft AZ-700 Exam. AZ-700 pdf dumps format is the best way to quickly prepare for the AZ-700 exam. You can open and use the Designing and Implementing Microsoft Azure Networking Solutions pdf questions file at any place. You don't need to install any software.

Microsoft AZ-700 Certification Exam is essential for professionals who want to excel in their careers as Azure networking experts. Designing and Implementing Microsoft Azure Networking Solutions certification exam offers a significant advantage in the job market, as it validates your deep understanding of the Azure networking environment. Additionally, this certification exam helps you to gain a competitive edge over your peers and demonstrates to employers that you have the necessary skills and expertise to design and implement Azure networking solutions.

AZ-700 Dump File & AZ-700 Exam Flashcards

Many clients may worry that their privacy information will be disclosed while purchasing our AZ-700 quiz torrent. We promise to you that our system has set vigorous privacy information protection procedures and measures and we won't sell your privacy information. The AZ-700 Quiz prep we sell boost high passing rate and hit rate so you needn't worry that you can't pass the exam too much. But if you fail in please don't worry we will refund you. Take it easy before you purchase our AZ-700 quiz torrent.

Microsoft AZ-700 Exam is intended for Azure networking professionals who have experience in designing and implementing Azure network solutions. AZ-700 exam measures your skills in implementing and managing Azure Virtual Network connectivity, Azure ExpressRoute, Site-to-Site VPN, and Azure Load Balancer. It also tests your knowledge of Azure Firewall, Azure Front Door, and Azure Traffic Manager.

Microsoft Designing and Implementing Microsoft Azure Networking Solutions Sample Questions (Q168-Q173):

NEW QUESTION # 168

You need to connect an on-premises network and an Azure environment. The solution must use ExpressRoute and support failing over to a Site-to-Site VPN connection if there is an ExpressRoute failure.

What should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Graphical user interface, table Description automatically generated

Reference:

<https://docs.microsoft.com/en-us/azure/expressroute/expressroute-howto-coexist-resource-manager>

NEW QUESTION # 169

Task 10

You need to configure VNET1 to log all events and metrics. The solution must ensure that you can query the events and metrics directly from the Azure portal by using KQL.

Answer:

Explanation:

See the Explanation below for step by step instructions.

Explanation

Here are the steps and explanations for configuring VNET1 to log all events and metrics and query them by using KQL:

* To enable logging for VNET1, you need to create a diagnostic setting that collects the platform metrics and logs from the virtual network and routes them to one or more destinations. You can choose to send the data to a Log Analytics workspace, a storage account, an event hub, or a partner solution1.

* To create a diagnostic setting, you need to go to the Azure portal and select your virtual network. Then select Diagnostic settings under Monitoring and select + Add diagnostic setting1.

* On the Add diagnostic setting page, enter or select the following information:

* Diagnostic setting name: Type a unique name for your diagnostic setting.

* Destination details: Select the destination where you want to send the data. For example, you can select Send to Log Analytics workspace and choose your workspace from the list.

* Log: Select the categories of logs that you want to collect. For VNET1, you can select NetworkSecurityGroupEvent and NetworkSecurityGroupRuleCounter as the log categories2.

* Metric: Select AllMetrics to collect all the platform metrics for VNET12.

* Select Save to create your diagnostic setting1.

* To query the events and metrics from the Azure portal by using KQL, you need to go to the Log Analytics workspace that you selected as the destination. Then select Logs under General and enter your KQL query in the query editor3.

* For example, you can use the following KQL query to get the top 10 network security group events for VNET1 in the last 24 hours:

```
NetworkSecurityGroupEvent
```

```
| where TimeGenerated > ago(24h)
```

```
| where ResourceId contains "VNET1"
```

```
| summarize count() by EventID
```

```
| top 10 by count_
```

Copy

* Select Run to execute your query and view the results in a table or a chart3.

NEW QUESTION # 170

You have the network security groups (NSGs) shown in the following table.

In NSG1, you create inbound rules as shown in the following table.

You have the Azure virtual machines shown in the following table.

NSG2 has only the default rules configured.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

NO, NO, YES

1. VM3 can connect to port 8080 on VM1 : false, UserRule_DenyVirtualNetworkInbound
2. VM1 and VM2 can connect on port 9090: false, UserRule_DenyVirtualNetworkInbound
3. VM1 can connect to VM3 on port 9090: true

NEW QUESTION # 171

Drag and Drop Question

You have two Azure subscriptions named Subscription1 and Subscription2. Subscription1 contains a virtual network named Vnet1. Vnet1 contains an application server. Subscription2 contains a virtual network named Vnet2.

You need to provide the virtual machines in Vnet2 with access to the application server in Vnet1 by using a private endpoint.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation:

Step 1: Deploy an Azure Load Balancer in front of the application server. Configure your application to run behind a standard load balancer in your virtual network.

Step 2: In Subscription 1, create a private link service and attach the service to the frontend IP configuration of the load balancer. Create a Private Link Service referencing the load balancer above.

Step 3: In Subscription 2, create a private endpoint by using the private link service.

Private Link service can be accessed from approved private endpoints in any public region. The private endpoint can be reached from the same virtual network, regionally peered VNets, globally peered VNets and on premises using private VPN or ExpressRoute connections.

Step 4: In Subscription1, accept the private endpoint connection request.

Network connections can be initiated only by clients that are connecting to the private endpoint.

Not:

Incorrect: Enable virtual network peering between Vnet1 and Vnet2.

Reference:

<https://docs.microsoft.com/en-us/azure/private-link/private-link-service-overview>

<https://docs.microsoft.com/en-us/azure/private-link/private-endpoint-overview>

NEW QUESTION # 172

You have an Azure subscription that contains the resources shown in the following table.

You need to ensure that VM1 and VM2 can connect only to storage1. The solution must meet the following requirements:

- * Prevent VM1 and VM2 from accessing any other storage accounts.
- * Ensure that storage1 is accessible from the internet.

What should you use?

- A. a private endpoint
- B. a private link
- C. a network security group (NSG)
- **D. a service endpoint policy**

Answer: D
