

# Pdf H19-338 Exam Dump, Exam H19-338 Objectives Pdf

www.EduSum.com  
Here are all the necessary details to pass the H19-338 exam on your first attempt. Get rid of all your worries now and find the details regarding the syllabus, study guide, practice tests, books, and study materials in one place. Through the H19-338 certification preparation, you can learn more on the Huawei Certified Specialist Professional-Presales-Storage, and getting the Huawei Certified Specialist Professional-Presales-Storage certification gets easy.

P.S. Free & New H19-338 dumps are available on Google Drive shared by BraindumpsVCE: <https://drive.google.com/open?id=1wKYhuSvE8sMDz5VaIwE4k2Y1u50xRT2M>

Our website has helped thousands of people getting the certification by offering valid H19-338 dumps torrent. The key of our success is that our H19-338 practice exam covers the comprehensive knowledge and the best quality of service. Our questions and answers in our H19-338 Training Materials are certified by our IT professionals. One-year free update will be allowed after payment.

We offer you H19-338 questions and answers for you to practice, the H19-338 exam dumps are of high quality. The soft test exam will offer you real test environment for you, so you can know the detailed information of the exam, it will help you have a deeper understanding of the exam. Your confidence will also be set up through the practicing of H19-338 Questions and answers, a good mental state will help you to exert the ability you should have.

## Exam H19-338 Objectives Pdf | H19-338 New Dumps Sheet

Contrary to most of the H19-338 exam preparatory material available online, BraindumpsVCE's dumps can be obtained on an affordable price yet their quality and benefits beat all similar products of our competitors. They will prove the best alternative of your time and money. What's more, our customers' care is available 24/7 for all visitors on our pages. You can put all your queries and get a quick and efficient response as well as advice of our experts on H19-338 Certification tests you want to take. Our professional online staff will attend you on priority.

The Huawei H19-338 exam is designed for professionals who have some experience in the field of storage technology. It is

recommended that candidates have at least two years of experience in the field of storage before attempting the exam. H19-338 Exam is available in several languages, including English, Chinese, and Japanese.

## Huawei HCSP-Presales-Storage Sample Questions (Q214-Q219):

### NEW QUESTION # 214

Which of the following technologies is not recommended for data centers?

- A. M-LAG
- B. VXLAN
- C. BFD
- D. 802.1x

**Answer: D**

Explanation:

Explanation

The technology that is not recommended for data centers is 802.1x. This is because 802.1x is a port-based authentication protocol that requires each device to be authenticated before accessing the network. This can cause delays and complexity in data center environments where there are many devices and high-speed connections.

### NEW QUESTION # 215

Which of the following is a feature of iMaster NCE-FabricInsight?

- A. AI-scenario data visualization
- B. Capacity/traffic risk prediction
- C. 1-3-5 intelligent O&M
- D. Flow analysis
- E. Network health check

**Answer: A,B,C,D,E**

Explanation:

Explanation

iMaster NCE-FabricInsight is a network analysis platform that provides intelligent O&M for data center networks. It has the following features:

1-3-5 intelligent O&M: This is a methodology that enables network administrators to locate faults within 1 minute, identify root causes within 3 minutes, and rectify faults within 5 minutes. It uses AI algorithms and big data analysis to provide proactive fault prevention, rapid fault location, and intelligent fault recovery.

Network health check: This is a function that monitors the network status and performance in real time, and provides comprehensive network health reports and suggestions for improvement. It uses various indicators such as availability, reliability, latency, jitter, packet loss, and bandwidth utilization to evaluate the network health.

Flow analysis: This is a function that collects and analyzes the network traffic data, and provides granular visibility into the network flows and applications. It uses technologies such as sFlow, NetStream, and Telemetry to obtain the flow information, and supports features such as flow path tracing, flow quality analysis, flow anomaly detection, and flow optimization.

AI-scenario data visualization: This is a function that displays the network data in a visual and interactive way, and provides insights into the network behavior and trends. It uses technologies such as graph databases, natural language processing, and machine learning to present the network data in various scenarios, such as topology views, service views, device views, alarm views, and report views.

Capacity/traffic risk prediction: This is a function that predicts the future network capacity and traffic demand based on historical data and trend analysis, and provides suggestions for network planning and optimization. It uses technologies such as time series analysis, regression analysis, and neural networks to forecast the network growth and identify potential risks.

### NEW QUESTION # 216

Which of the following is Huawei intelligent O&M software?

- A. OpenStack
- B. iMaster NCE-Fabric
- C. FusionCkxid

- D. iMaster NCE-FabricInsight

**Answer: D**

Explanation:

Explanation

iMaster NCE-FabricInsight is Huawei's intelligent O&M software that can provide network-wide visibility, intelligent analysis, and automated O&M for data center networks. iMaster NCE-FabricInsight can collect data from various sources, such as SNMP, Telemetry, Syslog, sFlow, and iFIT. It can also use AI algorithms to detect anomalies, locate faults, predict risks, and optimize performance. iMaster NCE-FabricInsight can also automate network configuration, deployment, verification, and recovery.

#### NEW QUESTION # 217

Which of the following are the strengths of the next-generation NetEngine AR routers?

- A. Incorporates an industry-leading CPU+NP architecture, providing industry-leading L3 to L7 full-service efficient processing
- B. Incorporates iPath (application-based intelligent traffic steering & optimization) and A-FEC (no frame freezing or artifacts even at a 20% packet loss rate)
- C. Features multi-mode ZTP on-demand network orchestration; real-time fault alarms and 45+ visualized reports
- D. Offers three times the industry average performance based on x86

**Answer: A,B,C,D**

Explanation:

Explanation

next-generation NetEngine AR routers are intelligent edge routers that provide comprehensive services for enterprises, such as WAN access, SD-WAN, VPN, voice, video, security, cloud interconnection, and IoT.

They have several strengths that differentiate them from other products in the market, such as:

Incorporating an industry-leading CPU+NP architecture, providing industry-leading L3 to L7 full-service efficient processing. The CPU+NP architecture combines the advantages of both CPU-based general-purpose processing and NP-based hardware acceleration, enabling high-performance processing of various services at different layers.

Incorporating iPath (application-based intelligent traffic steering & optimization) and A-FEC (no frame freezing or artifacts even at a 20% packet loss rate). iPath is a technology that intelligently steers traffic based on application types, quality requirements, link conditions, and policies, optimizing the user experience and resource utilization. A-FEC is a technology that enhances the error correction capability of video streams, ensuring smooth video transmission even under high packet loss scenarios.

Offering three times the industry average performance based on x86. The next-generation NetEngine AR routers use x86 processors that deliver high computing power and scalability, enabling them to support more services and users with lower power consumption. Featuring multi-mode ZTP on-demand network orchestration; real-time fault alarms and 45+ visualized reports. The next-generation NetEngine AR routers support zero-touch provisioning (ZTP), which simplifies the network deployment and management process by automatically discovering, registering, configuring, and upgrading devices. They also support real-time fault alarms and 45+ visualized reports that provide comprehensive network monitoring and analysis capabilities.

#### NEW QUESTION # 218

For defending against application layer DDoS attacks, which product will be the best choice?

- A. HiSec Insight
- C. AntiDDoS
- B. USG6000E
- C. FireHunter

**Answer: A**

Explanation:

Explanation

HiSec Insight is a security analysis platform that provides comprehensive protection against advanced persistent threats (APTs) and application layer DDoS attacks. It uses big data analysis and machine learning techniques to detect and block malicious traffic, identify attack sources, and generate security reports. The other products are not specialized in defending against application layer DDoS attacks. USG6000E is a series of next-generation firewalls that provide network security and VPN services. AntiDDoS is a series of products that provide protection against network layer DDoS attacks. FireHunter is a series of sandbox products that
