

Pass Guaranteed Quiz Snowflake - ARA-C01 - SnowPro Advanced Architect Certification–High Pass-Rate Downloadable PDF

DOWNLOAD the newest Pass4Test ARA-C01 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=16pvEbNjpR5MkWumHBTuh8MkSIsTKmD7X>

As professional model company in this line, success of the ARA-C01 training materials will be a foreseeable outcome. Even some nit-picking customers cannot stop practicing their high quality and accuracy. We are intransigent to the quality of the ARA-C01 exam questions and you can totally be confident about their proficiency sternly. Undergoing years of corrections and amendments, our ARA-C01 Exam Questions have already become perfect. The pass rate of our ARA-C01 training guide is as high as 99% to 100%.

Snowflake ARA-C01 Exam is a challenging exam that requires a significant amount of preparation and study. Candidates should have experience working with Snowflake and should be familiar with Snowflake best practices and implementation strategies. ARA-C01 exam consists of multiple-choice questions and scenario-based questions that test the candidate's ability to design and implement Snowflake solutions. Candidates who pass the exam will earn the SnowPro Advanced Architect certification, which is a highly respected certification in the data warehousing industry.

New ARA-C01 Test Tips - ARA-C01 Reliable Exam Papers

We are dedicated to providing an updated ARA-C01 practice test material with these three formats: PDF, Web-Based practice exam, and Desktop practice test software. With our ARA-C01 practice exam (desktop and web-based), you can evaluate and enhance your knowledge essential to crack the test. This step is critical to the success of your Snowflake ARA-C01 Exam Preparation, as these practice tests help you identify your strengths and weaknesses.

To pass the Snowflake ARA-C01 Exam, candidates need to demonstrate proficiency in various domains, including Snowflake architecture, security, data integration, performance tuning, and optimization. ARA-C01 exam is designed to evaluate the candidate's ability to design, implement and manage complex Snowflake environments that meet the business requirements of organizations. SnowPro Advanced Architect Certification certification is beneficial for architects, data engineers, and data scientists who work with Snowflake Data Cloud.

Snowflake SnowPro Advanced Architect Certification Sample Questions (Q39-Q44):

NEW QUESTION # 39

Based on the architecture in the image, how can the data from DB1 be copied into TBL2? (Select TWO).

- ```

use database DB1;
use schema SH1;
copy into DB1.SH2.TBL2
 from @STAGE1
 file_format = (format_name = FF_PIPE_1);

```

• A.

```

use database DB1;
use schema SH2;
copy into TBL2
 from @DB1.SH1.STAGE1

```
- ```

file_format = (format_name = DB1.SH1.FF_PIPE_1);
use database DB1;
use schema SH2;
copy into DB1.SH2.TBL2
  from @DB1.SH1.STAGE1
  file_format = (format_name = FF_PIPE_1);
            
```

• B.
- ```

use database DB1;
use schema SH2;
copy into TBL2
 from @STAGE1
 file_format = (format_name = FF_PIPE_1);

```

• C.
- ```

use database DB1;
use schema SH2;
copy into TBL2
  from @STAGE1
  file_format = (format_name = FF_PIPE_1);
            
```

• D.

```

use database DB1;
use schema SH2;
copy into TBL2
  from @STAGE1
  file_format = (format_name = FF_PIPE_1);
            
```

- E.

```

use database DB1;
use schema SH2;
copy into DB1.SH2.TBL2
  from @STAGE1
  file_format = (format_name = DB1.SH1.FF_PIPE_1);

```

Answer: B,D

Explanation:

* The architecture in the image shows a Snowflake data platform with two databases, DB1 and DB2, and two schemas, SH1 and SH2. DB1 contains a table TBL1 and a stage STAGE1. DB2 contains a table TBL2. The image also shows a snippet of code written in SQL language that copies data from STAGE1 to TBL2 using a file format FF PIPE 1.

* To copy data from DB1 to TBL2, there are two possible options among the choices given:

* Option B: Use a named external stage that references STAGE1. This option requires creating an external stage object in DB2.SH2 that points to the same location as STAGE1 in DB1.SH1. The external stage can be created using the CREATE STAGE command with the URL parameter specifying the location of STAGE1. For example:

SQLAI-generated code. Review and use carefully. More info on FAQ.

```
use database DB2;
```

```
use schema SH2;
```

```
create stage EXT_STAGE1
```

```
url = @DB1.SH1.STAGE1;
```

* Then, the data can be copied from the external stage to TBL2 using the COPY INTO command with the FROM parameter specifying the external stage name and the FILE FORMAT parameter specifying the file format name2. For example:

SQLAI-generated code. Review and use carefully. More info on FAQ.

```
copy into TBL2
```

```
from @EXT_STAGE1
```

```
file format = (format name = DB1.SH1.FF PIPE 1);
```

* Option E: Use a cross-database query to select data from TBL1 and insert into TBL2. This option requires using the INSERT INTO command with the SELECT clause to query data from TBL1 in DB1.SH1 and insert it into TBL2 in DB2.SH2. The query must use the fully-qualified names of the tables, including the database and schema names3. For example:

SQLAI-generated code. Review and use carefully. More info on FAQ.

```
use database DB2;
```

```
use schema SH2;
```

```
insert into TBL2
```

```
select * from DB1.SH1.TBL1;
```

* The other options are not valid because:

* Option A: It uses an invalid syntax for the COPY INTO command. The FROM parameter cannot specify a table name, only a stage name or a file location2.

* Option C: It uses an invalid syntax for the COPY INTO command. The FILE FORMAT parameter cannot specify a stage name, only a file format name or options2.

* Option D: It uses an invalid syntax for the CREATE STAGE command. The URL parameter cannot specify a table name, only a file location1.

* 2: COPY INTO table | Snowflake Documentation

* 3: Cross-database Queries | Snowflake Documentation

NEW QUESTION # 40

Please select the correct hierarchy from below

- A. Option D
- **B. Option C**
- C. Option A
- D. Option B

Answer: B

NEW QUESTION # 41

Company A has recently acquired company B. The Snowflake deployment for company B is located in the Azure West Europe region.

As part of the integration process, an Architect has been asked to consolidate company B's sales data into company A's Snowflake account which is located in the AWS us-east-1 region.

How can this requirement be met?

- A. Build a custom data pipeline using Azure Data Factory or a similar tool to extract the sales data from company B's Snowflake account. Transform the data, then load it into company A's Snowflake account.
- B. Export the sales data from company B's Snowflake account as CSV files, and transfer the files to company A's Snowflake account. Import the data using Snowflake's data loading capabilities.
- C. Migrate company B's Snowflake deployment to the same region as company A's Snowflake deployment, ensuring data locality. Then perform a direct database-to-database merge of the sales data.
- **D. Replicate the sales data from company B's Snowflake account into company A's Snowflake account using cross-region data replication within Snowflake. Configure a direct share from company B's account to company A's account.**

Answer: D

Explanation:

NEW QUESTION # 42

Dynamic data masking is supported in which editions of snowflake

- **A. Enterprise**
- **B. VPS**
- **C. Business Critical**
- D. Standard

Answer: A,B,C

NEW QUESTION # 43

A user, `analyst_user` has been granted the `analyst_role`, and is deploying a SnowSQL script to run as a background service to extract data from Snowflake.

What steps should be taken to allow the IP addresses to be accessed? (Select TWO).

- A. `ALTERROLEANALYST_ROLESETNETWORK_POLICY='ANALYST_POLICY';`
- B. `USE ROLE USERADMIN;`
`CREATE OR REPLACE NETWORK POLICY ANALYST_POLICY`
`ALLOWED_IP_LIST = ('10.1.1.20');`
- C. `ALTERUSERANALYSTJJSERSETNETWORK_POLICY='ANALYST_POLICY';`
- D. `ALTERUSERANALYST_USERSETNETWORK_POLICY='10.1.1.20';`
- E. `USE ROLE SECURITYADMIN;`
`CREATE OR REPLACE NETWORK POLICY ANALYST_POLICY ALLOWED_IP_LIST =`
`('10.1.1.20');`

Answer: C,E

Explanation:

To ensure that an `analyst_user` can only access Snowflake from specific IP addresses, the following steps are required:

* Option B: This alters the network policy directly linked to `analyst_user`. Setting a network policy on the user level is effective and ensures that the specified network restrictions apply directly and exclusively to this user.

* Option D: Before a network policy can be set or altered, the appropriate role with permission to manage network policies must be used. `SECURITYADMIN` is typically the role that has privileges to create and manage network policies in Snowflake. Creating a network policy that specifies allowed IP addresses ensures that only requests coming from those IPs can access Snowflake under this policy.

After creation, this policy can be linked to specific users or roles as needed.

Options A and E mention altering roles or using the wrong role (`USERADMIN` typically does not manage network security settings), and option C incorrectly attempts to set a network policy directly as an IP address, which is not syntactically or functionally valid. References: Snowflake's security management documentation covering network policies and role-based access controls.
