

Professional-Cloud-Architect Test Dates & Professional-Cloud-Architect Answers Free

BONUS!!! Download part of ExamsTorrent Professional-Cloud-Architect dumps for free: https://drive.google.com/open?id=1C_D_QeBVS7anwr9_tyHuQvNMNVfs_MH

Our website provides you the latest Professional-Cloud-Architect practice test with best quality that will lead you to success in obtaining the certification exam. The test engine is more efficient way for anyone to practice our Professional-Cloud-Architect Exam PDF and get used to the atmosphere of the formal test. We can guarantee you high passing score once you bought our Professional-Cloud-Architect real questions and remember the correct answers.

Our Professional-Cloud-Architect Test Guide is suitable for you whichever level you are in right now. Whether you are in entry-level position or experienced exam candidates who have tried the exam before, this is the perfect chance to give a shot. Not only from precious experience about the exam but the newest information within them. Our Google Certified Professional - Cloud Architect (GCP) study question will be valuable investment with reasonable prices. Besides, they can be obtained within 5 minutes if you make up your mind.

Professional-Cloud-Architect Exam Simulation: Google Certified Professional - Cloud Architect (GCP) & Professional-Cloud-Architect Study Guide Materials

Our Professional-Cloud-Architect practice exam simulator mirrors the Professional-Cloud-Architect exam experience, so you know what to anticipate on Professional-Cloud-Architect exam day. Our Google Professional-Cloud-Architect features various question styles and levels, so you can customize your Professional-Cloud-Architect exam questions preparation to meet your needs.

Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q148-Q153):

NEW QUESTION # 148

For this question, refer to the Dress4Win case study. Which of the compute services should be migrated as -is and would still be an optimized architecture for performance in the cloud?

- **A. Web applications deployed using App Engine standard environment**
- B. Hadoop/Spark deployed using Cloud Dataproc Regional in High Availability mode
- C. RabbitMQ deployed using an unmanaged instance group
- D. Jenkins, monitoring, bastion hosts, security scanners services deployed on custom machine types

Answer: A

NEW QUESTION # 149

During a high traffic portion of the day, one of your relational databases crashes, but the replica is never promoted to a master. You want to avoid this in the future. What should you do?

- A. Create snapshots of your database more regularly.
- B. Choose larger instances for your database.
- **C. Implement routinely scheduled failovers of your databases.**
- D. Use a different database.

Answer: C

Explanation:

Regardless of the size of the database, when it reaches its limit, the replica will not be promoted. Implementing failover routines/plans seems to me to be more suitable.

NEW QUESTION # 150

You have created several preemptible Linux virtual machine instances using Google Compute Engine. You want to properly shut down your application before the virtual machines are preempted. What should you do?

- **A. Create a shutdown script registered as a xinetd service in Linux and configure a Stackdriver endpoint check to call the service.**
- B. Create a shutdown script and use it as the value for a new metadata entry with the key shutdown-script in the Cloud Platform Console when you create the new virtual machine instance.
- C. Create a shutdown script named k99.shutdown in the /etc/rc.6.d/ directory.
- D. Create a shutdown script, registered as a xinetd service in Linux, and use the gcloud compute instances add-metadata command to specify the service URL as the value for a new metadata entry with the key shutdown-script-url

Answer: A

NEW QUESTION # 151

Your company wants to migrate their 10-TB on-premises database export into Cloud Storage. You want to minimize the time it takes to complete this activity, the overall cost and database load. The bandwidth between the on-premises environment and Google Cloud is 1 Gbps. You want to follow Google-recommended practices. What should you do?

- A. Develop a Dataflow job to read data directly from the database and write it into Cloud Storage
- **B. Use the Data Transfer appliance to perform an offline migration**
- C. Use a commercial partner ETL solution to extract the data from the on-premises database and upload it into Cloud Storage
- D. Compress the data and upload it with gsutil -m to enable multi-threaded copy

Answer: B

Explanation:

The Data Transfer appliance is a Google-provided hardware device that can be used to transfer large amounts of data from on-premises environments to Cloud Storage. It is suitable for scenarios where the bandwidth between the on-premises environment and Google Cloud is low or insufficient, and the data size is large. The Data Transfer appliance can minimize the time it takes to complete the migration, the overall cost and database load, by avoiding network bottlenecks and reducing bandwidth consumption. The Data Transfer appliance also encrypts the data at rest and in transit, ensuring data security and privacy. The other options are not optimal.

for this scenario, because they either require a high-bandwidth network connection (B, C, D), or incur additional costs and complexity (B, C). References:

NEW QUESTION # 152

You have an App Engine application that needs to be updated. You want to test the update with production traffic before replacing the current application version.

What should you do?

- A. Deploy the update using the Instance Group Updater to create a partial rollout, which allows for canary testing.
- B. Deploy the update as a new App Engine application, and use Google's global HTTP load balancing to split traffic between the new and current applications.
- C. Deploy the update in a new VPC, and use Google's global HTTP load balancing to split traffic between the update and current applications.
- **D. Deploy the update as a new version in the App Engine application, and split traffic between the new and current versions.**

Answer: D

Explanation:
