Pure Storage Certified FlashArray Implementation Specialist Sample Questions (Q23-Q28):

NEW QUESTION # 23

An Implementation Engineer needs to run the puresetup replace procedure on the FlashArray//X during a controller upgrade. Which command should the Implementation Engineer run on the new controller to determine its model?

- A. hwconfig --model
- B. hwconfig --all
- C. purearray list --controller

Answer: A

Explanation:
The command hwconfig --model returns the model information of the controller, which is essential before running the puresetup replace procedure.

NEW QUESTION # 24
Which default speed FC SFPs are shipped in FlashArray//XCR4 FC arrays?

- A. 0
- B. 1
- C. 2

Answer: C

Explanation:
FlashArray//XCR4 arrays are shipped with 32Gb Fibre Channel (FC) SFPs by default. These 32Gb FC SFPs are capable of supporting 64Gb speeds, which can be enabled via a firmware upgrade. This allows the array to leverage higher-speed FC connections as needed.

NEW QUESTION # 25
A customer has ordered several FlashArrays and wants to have ActiveCluster configured. What is the maximum quantity of arrays supported with ActiveCluster?

- A. 0
- B. 1
- C. 2

Answer: B

Explanation:
FlashArray ActiveCluster is designed for synchronous replication between two FlashArray systems, enabling active-active configurations across two sites. This setup allows both arrays to serve I/O simultaneously, providing high availability and zero RPO (Recovery Point Objective). Each array in the ActiveCluster configuration maintains identical volume identities, ensuring seamless access for hosts regardless of the array they connect to. The configuration supports metro-area clustering, with a maximum round-trip latency of 11 milliseconds between arrays. Additionally, the Pure1 Cloud Mediator or an on-premises mediator is utilized to manage failover and prevent split-brain scenarios, eliminating the need for a third site or external gateway.
While ActiveCluster supports a two-site configuration, it does not support additional arrays within the same synchronous setup. For scenarios requiring protection across more than two sites, asynchronous replication solutions like ActiveDR™ can be employed. ActiveDR allows for asynchronous replication to a third site, providing broader disaster recovery capabilities.
Therefore, the maximum number of arrays supported in a single ActiveCluster configuration is two.

NEW QUESTION # 26
A customer has purchased a FlashArray//XL. What power cables are required in order to connect this array to rack PDUs?

- A. 4 x C13/14
- B. 4 x C19/20
- C. 2 x C13/14

Answer: A

Explanation:
FlashArray//XL arrays require four power cables with C19 (receptacle) to C20 (plug) connectors to connect properly to rack PDUs, supporting redundant power supplies and higher power demands.

NEW QUESTION # 27
When performing an install on a FlashArray, what step should be taken first?

- A. Code upgrade
- B. CT0 configuration
- C. CT1 configuration

Answer: B

Explanation:
The installation process begins with configuring controller 0 (CT0) first, as it is the primary controller responsible for initial system setup.
