SAP Certified Associate - Integration Developer Sample Questions (Q20-Q25):

NEW QUESTION # 20

You want to dispatch messages only when a child element "Product" exists. Which condition do you set?

- A. ProductSet/count(Product)>0
- B. /ProductSet/count(Product)<0
- C. /ProductSet/counter(Product)>0
- D. /ProductSet/count(Product)=0

Answer: A

Explanation:

The condition ProductSet/count(Product)>0 checks if the number of Product elements in the ProductSet element is greater than zero, which means that a child element "Product" exists. This condition can be used to dispatch messages only when a Product element is present. Reference: SAP Integration Suite | SAP Community, Integration Software | SAP Integration Suite

NEW QUESTION # 21

You are creating an API in the API management capability within SAP Integration Suite using Edit in API Designer. What is the next step to consolidate the resources?

- A. Generate the server stubs
- B. Generate the client stubs
- C. Generate the database tables.
- D. Generate the microservices.

Answer: A

Explanation:

After creating an API in the API management capability within SAP Integration Suite using Edit in API Designer, the next step to consolidate the resources is to generate the server stubs. Server stubs are code snippets that implement the API operations on a server-side application. They can be generated in different languages and frameworks, such as Java, Node.js, Python, or Spring Boot. Generating server stubs can help you to quickly prototype and test your API functionality without writing much code.

NEW QUESTION # 22

What can you use to prevent overload in an OData request and reply call?

- A. HTTP adapter
- B. Query filter
- C. Stop parameter
- D. Paging

Answer: D

Explanation:

To prevent overload in an OData request and reply call, you can use paging. Paging is a technique that allows you to retrieve a large number of data sets in smaller chunks or pages. You can use the OData query options \$top and \$skip to specify how many records you want to fetch and how many records you want to skip in each request. This reduces the network load and improves the performance of the OData service. Reference: [OData API](#) | [SAP Help Portal](#), [SAP Integration Suite: enrich a payload with OData Service](#) | [SAP Blogs](#)

NEW QUESTION # 23

Which SAP Integration Suite component delivers the Cloud Event to the "emis-s4hana-uc123" message queue?

- A. Process Integration
- B. API Management
- C. Open Connector
- D. Event Mesh

Answer: D

Explanation:

In SAP Integration Suite, the component responsible for delivering Cloud Events to message queues is Event Mesh. Event Mesh handles event-driven communication and manages message queues like emis-s4hana-uc123.

Process Integration (PI/PO) is on-premise middleware, not part of Integration Suite cloud services.

API Management handles APIs, not messaging events.

Open Connectors provides connectivity to third-party SaaS apps, not queue management.

Thus, the Cloud Event is delivered to the message queue via Event Mesh.

NEW QUESTION # 24

What are the maturity levels of the SAP Integration Solution Advisory Method-ology? Note: There are 2 answers to this question.

- A. Implement your integration architectural strategy.
- B. Design your hybrid integration platform.

- C. Assess your integration strategy
- D. Enable your integration structure.

Answer: B,C

Explanation:

The maturity levels of the SAP Integration Solution Advisory Methodology are as follows:

Assess your integration strategy. This level helps you evaluate your current integration landscape and identify the gaps and challenges that need to be addressed.

Design your hybrid integration platform. This level helps you define your target integration architecture and select the best-fit integration technologies and tools for your scenarios.

Implement your integration architectural strategy. This level helps you execute your integration projects and deliver value to your business.

Enable your integration structure. This level helps you establish a governance model and best practices for your integration operations and maintenance. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP
