Peoplecert ITIL-4-Practitioner-Release-Management Examcollection Dumps, Test ITIL-4-Practitioner-Release-Management Collection

Unlike many other learning materials, our ITIL-4-Practitioner-Release-Management study materials are specially designed to help people pass the exam in a more productive and time-saving way, and such an efficient feature makes it a wonderful assistant in personal achievement as people have less spare time nowadays. On the other hand, ITIL-4-Practitioner-Release-Management Study Materials are aimed to help users make best use of their sporadic time by adopting flexible and safe study access.

Peoplecert ITIL-4-Practitioner-Release-Management Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • AI and Automation: This section of the exam measures the skills of IT Operations Managers and addresses the use of AI and automation in delivering IT systems and applications that align with user needs. It ensures that software releases meet quality standards, are delivered on time, and stay within budget, using modern tools and intelligent technologies.
Topic 2	<ul style="list-style-type: none"> • Change: This section of the exam measures the skills of DevOps Engineers and focuses on how to manage and control changes within IT environments. It includes planning, executing, monitoring, and communicating changes to ensure minimal disruption while keeping stakeholders informed about the progress and impact of changes.
Topic 3	<ul style="list-style-type: none"> • Service Design: This section of the exam measures the skills of IT Release Managers and covers the principles and practices involved in designing services and products that are practical, useful, and aligned with stakeholder expectations. It focuses on ensuring that services are designed in a way that they can be effectively delivered and supported by the organization and its partners.

Peoplecert ITIL 4 Practitioner: Release Management Exam Sample Questions (Q17-Q22):

NEW QUESTION # 17

During a value stream walk of the incident resolution value stream, an organization has realized that some incidents take longer to resolve because installation of overdue software updates is required. What should the organization do to improve the incident resolution times?

- **A. Ensure that required updates are enforced as part of the ongoing operations and maintenance**
- B. Include release of the required updates in the request fulfilment activities
- C. Ensure that required updates are included in the release of the new services
- D. Include release of the required updates in the incident resolution activities

Answer: A

Explanation:

This scenario involves using technology to improve incident resolution by addressing overdue updates. The ITIL 4 Practitioner: Release Management document states: "To prevent delays in incident resolution due to overdue updates, release management can enforce updates as part of ongoing operations and maintenance, using automated tools to ensure systems are up-to-date" (Section 4.2).

* Option A (Include updates in incident resolution activities) is reactive and inefficient, as it delays resolution by embedding release activities into incident handling.

* Option B (Ensure updates are enforced as part of ongoing operations and maintenance) is proactive, using technology to keep systems updated, thus reducing incident resolution times by preventing the issue.

* Option C (Include updates in request fulfilment activities) addresses user requests, not the root cause of incident delays.

* Option D (Ensure updates are included in the release of new services) doesn't address existing systems needing updates, only new services.

The correct answer is B, as it leverages technology in operations to proactively manage updates, aligning with ITIL 4 principles.

NEW QUESTION # 18

An organization manually checks that releases of new or changed products/services have been successfully completed. Which tools should be used to automate this process?

- A. Analysis and reporting tools
- **B. Monitoring and event management tools**
- C. Workflow management and collaboration tools
- D. Enterprise architecture tools

Answer: B

Explanation:

Automating the verification of release success involves tracking the performance and stability of the released services. The ITIL 4 Practitioner: Release Management document notes: "Monitoring and event management tools can automate the verification of release success by tracking system performance and detecting anomalies post-release, ensuring the release meets its objectives" (Section 4.2).

* Option A (Monitoring and event management tools) is correct, as these tools can automatically check system health and performance after a release, replacing manual checks.

* Option B (Workflow management and collaboration tools) focuses on process coordination, not post-release verification.

* Option C (Enterprise architecture tools) is used for dependency mapping, not release verification.

* Option D (Analysis and reporting tools) provides retrospective insights but doesn't automate real-time verification.

The correct answer is A, as monitoring tools are best suited for automating release verification.

NEW QUESTION # 19

What is MOST LIKELY to affect how significantly an organization's release management activities are dependent on partners and suppliers?

- A. The source of the organization's products and technology solutions
- B. The knowledge level of the organization's users
- C. The maturity of the release management practice
- D. The amount of automation in the release management practice

Answer: A

Explanation:

The dependency on partners and suppliers in release management is influenced by the extent to which an organization relies on external products or services. The ITIL 4 Practitioner: Release Management document explains: "The source of the organization's products and technology solutions significantly affects the dependency on partners and suppliers, as reliance on external software, hardware, or services increases the need for coordination during releases" (Section 3.4).

* Option A (The knowledge level of users) impacts user adoption but not the dependency on suppliers for release activities.

* Option B (The maturity of the practice) affects internal efficiency, not the structural dependency on external parties.

* Option C (The amount of automation) influences how releases are executed but doesn't determine the dependency on suppliers.

* Option D (The source of products and technology solutions) directly determines how much the organization relies on external parties, affecting release management dependency.

The correct answer is D, as the source of technology solutions most significantly impacts supplier dependency.

NEW QUESTION # 20

A retail organization is hiring a new release manager. The vacancy description indicates that successful candidates should have good knowledge of technologies and platforms used by the organization, good knowledge of ITIL and DevOps, and experience in retail. What other skill is important to the release management role?

- A. Understanding of the organization's business
- B. Technical expertise
- C. Project planning and coordination
- D. Knowledge of service management frameworks

Answer: C

Explanation:

The release management role in ITIL 4 requires a range of competencies to ensure effective coordination and execution of releases. The ITIL 4 Practitioner: Release Management document states: "A release manager must have strong project planning and coordination skills to manage the scheduling, communication, and execution of releases, ensuring alignment with organizational goals and minimal disruption" (Section 3.3).

* Option A (Knowledge of service management frameworks) is already covered by the requirement of ITIL knowledge in the vacancy description, so it's not an additional skill.

* Option B (Project planning and coordination) is a critical skill for release managers, as they need to orchestrate complex release activities, manage timelines, and coordinate with stakeholders, which isn't explicitly covered by the listed requirements.

* Option C (Technical expertise) is implied by the requirement for knowledge of technologies and platforms, so it's not an additional skill.

* Option D (Understanding of the organization's business) is important but less specific to release management compared to project planning, and the retail experience requirement already covers business context.

The correct answer is B, as project planning and coordination is a key additional skill for effective release management.

NEW QUESTION # 21

What automation tools should be used to help a release manager understand how the organization's services are related to one another?

- A. Analysis and reporting tools
- **B. Enterprise architecture tools**
- C. Work planning and prioritization tools
- D. Monitoring and event management tools

Answer: B

Explanation:

Understanding service relationships is critical for effective release management, especially to assess the impact of releases. The ITIL 4 Practitioner: Release Management document states: "Enterprise architecture tools help release managers understand the relationships between services, applications, and infrastructure, enabling better impact analysis and dependency mapping for releases" (Section 4.2).

* Option A (Analysis and reporting tools) focuses on performance metrics, not service relationships.

* Option B (Work planning and prioritization tools) aids in scheduling, not understanding service dependencies.

* Option C (Monitoring and event management tools) is used for real-time performance tracking, not structural relationships.

* Option D (Enterprise architecture tools) is the correct choice, as these tools map out service relationships and dependencies, helping the release manager plan releases effectively.

The correct answer is D, as enterprise architecture tools are designed for this purpose.

NEW QUESTION # 22

.....

The Free4Torrent is committed to making the entire ITIL-4-Practitioner-Release-Management exam preparation journey simple, smart, and successful. To achieve this objective the Free4Torrent is offering the top-rated and updated ITIL-4-Practitioner-Release-Management exam practice test questions in three different formats.
