next
end

```

A customer in Costa Rica has a FortiGate with SD-WAN configured to use a VPN connection to the United States to browse the internet using a public IP from that country. They would like to enable the SD-WAN rule using a webhook. Which configuration must be added to the FortiGate, and which type of HTTP request must be used to accomplish this? (Choose two.)

Issue an HTTP POST to
 'https://192.168.1.99/api/v2/monitor/system/automation-stitch/webhook/Enable%20USA%20Browsing'

- A.

Issue an HTTP GET to
 'https://192.168.1.99/api/v2/monitor/system/automation-stitch/webhook/Enable%20USA%20Browsing'

- B.

Add to the FortiGate the configuration:

```

config system automation-trigger
edit "Enable USA Browsing"
set event-type incoming-webhook
next
end
config system automation-stitch
edit "Enable USA Browsing stitch"
set trigger "Enable USA Browsing"
config actions
edit 1
set action "Enable USA Browsing script"
set required enable
next
end

```

- C.

Answer: B,D

NEW QUESTION # 59

What is the benefit of using FortiGate NAC LAN Segments?

- A. It provides support for multiple DHCP servers within the same VLAN.
- B. It provides physical isolation without changing the IP address of hosts.
- C. It allows for assignment of dynamic address objects matching NAC policy.
- D. It provides support for IGMP snooping between hosts within the same VLAN

Answer: B

Explanation:

FortiGate NAC LAN Segments are a feature that allows users to assign different VLANs to different LAN segments without changing the IP address of hosts or bouncing the switch port. This provides physical isolation while maintaining firewall sessions and avoiding DHCP issues. One benefit of using FortiGate NAC LAN Segments is that it allows for assignment of dynamic address objects matching NAC policy. This means that users can create firewall policies based on dynamic address objects that match the NAC policy criteria, such as device type, OS type, MAC address, etc. This simplifies firewall policy management and enhances security by applying different security profiles to different types of devices. NEW QUESTION # 60

You are responsible for recommending an adapter type for NICs on a FortiGate VM that will run on an ESXi Hypervisor. Your recommendation must consider performance as the main concern, cost is not a factor.

Which adapter type for the NICs will you recommend?

- A. Virtual Function (VF) PCI Passthrough
- B. Native ESXi Networking with VMXNET3
- C. Native ESXi Networking with E1000
- D. Physical Function (PF) PCI Passthrough

Answer: D

Explanation:

The FortiGate VM is a virtual firewall appliance that can run on various hypervisors, such as ESXi, Hyper-V, KVM, etc. The adapter type for NICs on a FortiGate VM determines the performance and compatibility of the network interface cards with the hypervisor and the physical network. There are different adapter types available for NICs on a FortiGate VM, such as E1000, VMXNET3, SR-IOV, etc. If performance is the main concern and cost is not a factor, one option is to use native ESXi networking with VMXNET3 adapter type for NICs on a FortiGate VM that will run on an ESXi hypervisor. VMXNET3 is a paravirtualized

network interface card that is optimized for performance in virtual machines and supports features such as multiqueue support, Receive Side Scaling (RSS), Large Receive Offload (LRO), IPv6 offloads, and MSI/MSI-X interrupt delivery. Native ESXi networking means that the FortiGate VM uses the standard virtual switch (vSwitch) or distributed virtual switch (dvSwitch) provided by the ESXi hypervisor to connect to the physical network.

This option can provide high performance and compatibility for NICs on a FortiGate VM without requiring additional hardware or software components. NEW QUESTION # 61

Refer to The exhibit showing a FortiEDR configuration.

SECURITY POLICIES				
<input type="checkbox"/> Clone Policy <input type="checkbox"/> Set Mode ▾ <input type="checkbox"/> Assign Collector Group <input type="checkbox"/> Delete				
✓ ▾ All	POLICY NAME			
▶ ✓		Execution Prevention	FORTINET	<input checked="" type="checkbox"/>
▶ ✓		Exfiltration Prevention	FORTINET	<input checked="" type="checkbox"/>
▶ ✓		Ransomware Prevention	FORTINET	<input checked="" type="checkbox"/>
▶ ✓		Device Control	FORTINET	<input type="checkbox"/>
▶ ✓		extended Detection Policy	FORTINET	<input type="checkbox"/>

Based on the exhibit, which statement is correct?

- A. If a malicious file is executed and attempts to establish a connection it will generate duplicate events.
- B. The presence of a cryptolocker malware at rest on the filesystem will be detected by the Ransomware Prevention security policy.
- C. FortiEDR Collector will not collect OS Metadata.
- D. If an unresolved file rule is triggered, by default the file is logged but not blocked.

Answer: D

NEW QUESTION # 62

Refer to the exhibit.

Create New SD-WAN Template				
Name	<input type="text"/>			
Description	<input type="text" value="virtual-wan-link"/>			
SD-WAN Status	<input type="checkbox"/>			
Interface Members ▾				
<input type="checkbox"/> ID <input type="checkbox"/> Interface Member <input type="checkbox"/> Status <input type="checkbox"/> Gateway <input type="checkbox"/> Cost				
<input type="checkbox"/>	virtual-wan-link			

You need to create a base SD-WAN configuration that includes SD-WAN rules and Performance SLAs for spoke sites with various connectivity types. It needs to be done in a way that can be easily applied to new sites with a minimum amount of change.

How should you create the SD-WAN zones?

- A. With no members configured
- **B. With members and assign overlay interfaces**
- C. With members without interface assignments
- D. With members and assign interfaces but do not specify a gateway

Answer: B
