The high pass rate of our study materials means that our products are very effective and useful for all people to pass their exam and get the related certification.

Microsoft Administering Windows Server Hybrid Core Infrastructure

Sample Questions (Q101-Q106):

NEW QUESTION # 101

You have an on-premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant. The on-premises network is connected to Azure by using a Site-to-Site VPN. You have the DNS zones shown in the following table.

You need to ensure that names from fabrikam.com can be resolved from the on-premises network. Which two actions should you perform? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

- A. Create a conditional forwarder for fabrikam.com on DC1.
- B. Create a stub zone for fabrikam.com on DC1.
- C. Deploy an Azure virtual machine that runs Windows Server. Configure the virtual machine & a DNS forwarder.
- D. Deploy an Azure virtual machine that runs Windows Server. Modify the DNS Servers settings for the virtual network.
- E. Create a secondary zone for fabrikam.com on DC1.

Answer: A,C

NEW QUESTION # 102

You create an Azure virtual machine named Server1 that runs Windows Server.

Server1 has the disk configuration shown in the following exhibit.

Answer:

Explanation:

- 1 - Start Server1.
- 2 - Create and attach a new data disk.
- 3 - Shut down Server1.

NEW QUESTION # 103

Drag and Drop Question

You have an on-premises server that runs Windows Server and contains a file share named Share1.

You have an Azure subscription that contains an Azure Files share named azshare1 and an Azure File Sync instance named Sync1.

Sync1 syncs Share1 with azshare1.

You need to delete Sync1.

Which four resources should you delete in sequence? To answer, move the appropriate resources from the list of resources to the answer area and arrange them in the correct order.

Answer:

Explanation:

NEW QUESTION # 104

Your company has offices in Boston and Montreal. The offices are connected by using a 10-Mbps WAN link that is often saturated. The office in Boston contains the following:

* An Active Directory Domain Services (AD DS) domain controller named DC1.

* A server named Server1 that runs Windows Server and has the File Server role installed. The office in Montreal contains 20 client computers that run Windows 10. Montreal does NOT have any servers.

The company plans to deploy a new line of business (LOB) application to all the client computers. The installation source files for the application are in \\Server1\Apps.
