It includes methods for diagnosing connectivity issues and optimizing gateway performance.

CheckPoint Check Point Certified Troubleshooting Expert - R81.20 Sample Questions (Q24-Q29):

NEW QUESTION # 24

Which of the following file is commonly associated with troubleshooting crashes on a system such as the Security Gateway?

- A. core dump
- B. CPMIL dump
- C. fw monitor
- D. tcpdump

Answer: A

NEW QUESTION # 25

The packet processing infrastructure consists of 4 components. Which component contains the CLOB, the object that contains information about the packet that is needed to make security decisions?

- A. Handlers
- B. Observers
- C. Manager
- D. Classifiers

Answer: D

NEW QUESTION # 26

What does CMI stand for in relation to the Access Control Policy?

- A. Content Matching Infrastructure
- B. Context Management Infrastructure
- C. Context Manipulation Interface
- D. Content Management Interface

Answer: B

NEW QUESTION # 27

If the cpsemd process of SmartEvent has crashed or is having trouble coming up, then it usually indicates that _____.

- A. The logged in administrator does not have permissions to run SmartEvent
- B. Cpd daemon is unable to connect to the log server
- C. Postgres database is down
- D. The SmartEvent core on the Solr indexer has been deleted

Answer: C

Explanation:

cpsemd is the process responsible for logging into the SmartEvent GUI. Therefore, you need to check the status of this process and debug it, if necessary. Usually, the issue with the cpsemd process is that it is crashing, or not coming up. What causes this process to crash or not come up is that the PostgreSQL database is down. Therefore, in order to run the cpsemd process successfully, you need to run the PostgreSQL database successfully.

NEW QUESTION # 28

Which two files contain the Application Database on the Security Gateway?

- A. application_db.C and application_custom_db.C
- B. apcl_db.C and apd_custom_db.C
- C. appi_db.C and appi_custom_db.C
- D. api_db.C and api_custom_db.C

Answer: A

Explanation:

The Application Database on a Check Point Security Gateway stores information about applications and categories used by the Application Control and URL Filtering blades. This database is maintained in specific files on the Gateway.

Option A: Incorrect. api_db.C and api_custom_db.C are not standard files related to the Application Database. These names may be confused with API-related configurations.

Option B: Incorrect. apcl_db.C and apd_custom_db.C are not recognized as Application Database files. These names do not align with Check Point's file naming conventions.

Option C: Correct. The Application Database is stored in application_db.C (the main database) and application_custom_db.C (custom application definitions). These files are located in the \$FWDIR/conf directory on the Security Gateway.

Option D: Incorrect. appi_db.C and appi_custom_db.C are close but incorrect. The correct prefix is application_, not appi_.

Reference:

The Check Point R81.20 Security Gateway Administration Guide describes the Application Control and URL Filtering blades, including the storage of application data in application_db.C and application_custom_db.C. The CCTE R81.20 course covers file structures and database management for troubleshooting Application Control issues.

For precise details, refer to:

Check Point R81.20 Security Gateway Administration Guide, section on "Application Control and URL Filtering" (available via Check Point Support Center).

CCTE R81.20 Courseware, which includes labs on Application Database management (available through authorized training partners).

NEW QUESTION # 29

.....
