この驚くほど高く受け入れられている試験に適合するには、NCP-CN学習教材のような上位の実践教材で準備する必要があります。彼らは時間とお金の面で最良の選択です。この試験について決心している限り、その職業は疑う余地がないことを理解できます。そして、彼らの職業はNCP-CNトレーニング準備で徹底的に表現されています。彼らはNCP-CN試験の本当の知識をつかみ、忘れられない経験をするのに非常に役立ちます。この小さなメリットをお見逃しなく。

Nutanix NCP-CN 認定試験の出題範囲:

トピック	出題範囲
トピック 1	<ul style="list-style-type: none">• Prepare the Environment for an NKP Deployment: This section of the exam measures the skills of infrastructure engineers and cloud administrators and covers the initial setup tasks needed for NKP deployment. Candidates must demonstrate the ability to seed a private container registry, create a bootstrap Kubernetes cluster, and determine license tiers suitable for clusters. They also need to prepare a bastion host for secure access, build machine images or prepare nodes for deployment, and gather all necessary information to build a cluster on the target cloud or on-premises provider.
トピック 2	<ul style="list-style-type: none">• Perform Day 2 Operations: This part assesses the expertise of site reliability engineers and cluster operators in ongoing cluster management tasks after deployment. It includes configuring authentication and authorization mechanisms, setting up logging systems, and implementing cluster backup and recovery procedures. Candidates also need to demonstrate skills in monitoring cluster performance and health, configuring autoscaling to handle workload changes, and performing lifecycle management functions such as upgrades and maintenance.
トピック 3	<ul style="list-style-type: none">• Manage Building an NKP Cluster: This section evaluates the skills of Kubernetes administrators and platform engineers in customizing and deploying NKP clusters. Candidates must show proficiency in tailoring cluster configurations to meet specific requirements and deploying Kommander, the management platform, while applying the appropriate licenses to enable cluster features and management capabilities.
トピック 4	<ul style="list-style-type: none">• Conduct NKP Fleet Management: This section tests the abilities of platform administrators and cloud operations engineers in managing multiple clusters as a fleet. It focuses on configuring workspaces to organize clusters, deploying workload clusters within these workspaces, and attaching or detaching clusters as needed. Additionally, candidates must be able to configure projects for workload segmentation and manage platform applications that support the overall NKP environment.

Nutanix Certified Professional - Cloud Native v6.10 認定 NCP-CN 試験問題 (Q41-Q46):

質問 # 41

A Platform Engineer needs to create an NKP custom image for vSphere.
Which option should the engineer use?

- A. RedHat Satellite
- B. Hashicorp Packer
- C. Konvoy Image Builder
- D. Nutanix Image Builder

正解: C

質問 # 42

A development team decided to employ an efficient monitoring system with Grafana-logging, which was successfully implemented as can be seen in the following output:

AppDeployment "kommander-default-workspace/grafana-logging" created in namespace "kommander-default-workspace".
Which command did the team execute to complete this task?

- A. `nkp create appdeployment grafana-logging --app grafana-logging-6.57.4 --workspace default-workspace`
- B. `kubectrl get appdeployment -n kommander-default-workspace`
- C. `export WORKSPACE_NAMESPACE=kommander-default-workspace; nkp create package-bundle grafana-logging`
- D. `kubectrl get helmreleases grafana-logging -n kommander-default-workspace -w`

正解: A

質問 # 43

NKP Starter is bundled with which entitlement?

- A. NCM Pro
- B. NCI Pro
- C. NCM Starter
- D. NCI Starter

正解: D

質問 # 44

A Platform Engineer manages an NKP v2.12.x environment and is using NKP Image Builder (NIB) to create a custom image.
Which two distributions are available for use by the engineer for this task? (Choose two.)

- A. Rocky Linux
- B. Ubuntu
- C. CentOS
- D. Fedora

正解: A、B

解説:

The NKPA course specifies that the Nutanix Image Builder (NIB), used for creating custom machine images for NKP cluster nodes, supports specific Linux distributions that are compatible with Nutanix infrastructure and Kubernetes requirements. For NKP v2.12.x, the supported distributions for NIB are Ubuntu and Rocky Linux, as these are tested and optimized for NKP deployments, ensuring stability and compatibility with Cluster API (CAPI) and Nutanix AHV.

The Nutanix Cloud Native (NCP-CN) 6.10 Study Guide states: "NKP Image Builder (NIB) supports Ubuntu and Rocky Linux as base distributions for creating custom images for NKP cluster nodes, ensuring compatibility with Kubernetes and Nutanix infrastructure." Ubuntu provides a widely-used, well-supported base with long-term support (LTS) versions, while Rocky Linux is a CentOS replacement that Nutanix has adopted for its reliability and enterprise focus, especially after CentOS 8's end-of-life in 2021.

Incorrect Options:

* B. Fedora: Fedora is not a supported distribution for NIB in NKP, as it is more suited for bleeding-edge development rather than production Kubernetes environments.

* D. CentOS: CentOS 8 reached end-of-life in December 2021, and Nutanix has shifted to Rocky Linux as its replacement for NKP image building. The course does not list CentOS as a supported option for NIB in NKP v2.12.x.

質問 # 45

After a finished project, three Kubernetes clusters within a workspace were deleted, so the workspace is empty. Now a Platform Engineer needs to delete the workspace. How should the engineer delete the workspace in NKP?

- A. Run `kubectl delete workspace <workspace_name>`
- **B. From NKP UI, on top menu bar select Global, then select Workspaces in the menu, select the three-dot button for the workspace to delete, and then click Delete.**
- C. Ask a workspace user to delete the workspace. The user has the Delete option in their workspace home page.
- D. Run `kubectl delete workspace <workspace-name>`

正解: B

質問 # 46
