Salesforce Certified Experience Cloud Consultant Sample Questions (Q138-Q143):

NEW QUESTION # 138

Which two statements regarding data categories are true?

Choose 2 answers

- A. When a category is made visible to a user through custom settings or is made visible by default, its child and parent categories are not included.
- B. Customer Portal users and partner portal users inherit data category visibility settings of the role assigned to their account (owner) managers by default.
- C. Translated articles will not follow the master article data category. Therefore, translated articles can be assigned to a different data category.
- D. Child roles cannot see more data categories than their parent role. If the parent role's visibility changes, the child role's category visibility is reset to its parent's category visibility.

Answer: B,D

Explanation:

Two statements regarding data categories that are true are A and B. Data category visibility is controlled by roles, permission sets, or profiles. Child roles cannot see more data categories than their parent role, and if the parent role's visibility changes, the child role's category visibility is reset to match the parent's. Customer Portal users and partner portal users inherit data category visibility settings of the role assigned to their account (owner) managers by default, unless they have a custom profile that overrides the role settings.

NEW QUESTION # 139

DreamHouse Reality (DR) is looking to enter the insurance business. After discussing with business advisor. DR has decided to use independent agents to manage claims.

Which two features are available for DR to implement a solution involving insurance agent persona?

Choose 2 answers

- A. Financial Services Lightning template
- B. Insurance agent permission set license
- C. Financial Services Community permission set license
- D. Insurance Agent Portal Lightning template

Answer: C,D

Explanation:

Financial Services Community permission set license is a license type that allows users to access Financial Services Cloud objects and features, such as policies, claims, referrals, and goals. Insurance Agent Portal Lightning template is a template that is designed for insurance agents who need to manage their leads, opportunities, policies, claims, and referrals. These two features are available for DR to implement a solution involving insurance agent persona.

NEW QUESTION # 140

Bloomington Caregivers (BC) wants to share Covid-19 related information with all site visitors, including unauthenticated users. Which three things should BC in mind about unauthenticated or guest user access?

Choose 3 answers

- A. Guest user can't be members of public groups or queues.
- B. Guest user can't access records via manual sharing
- C. Guest user can't records via manual existing records
- D. Guest user external organization-wide default are always set to Private.
- E. Guest user external organization-wide defaults are always set to Public.

Answer: A,B,D

Explanation:

Three things that BC should keep in mind about unauthenticated or guest user access are A, B, and D.

Unauthenticated or guest user access is a feature that allows users to access your Experience Cloud site without logging in or registering. Unauthenticated or guest users have limited access and visibility to data in your Salesforce org, and they have some restrictions, such as:

- * Guestuser external organization-wide defaults are always set to Private. This means that guest users cannot access any records that are owned by external users (such as Customer Community or Partner Community users) unless they are explicitly shared with them.
- * Guest user can't access records via manual sharing. This means that guest users cannot access any records that are shared with them by using the Sharing button on the record detail page.
- * Guest user can't be members of public groups or queues. This means that guest users cannot access any records that are shared with them by using public groups or queues as criteria.

NEW QUESTION # 141

Ursa Major Solar would like to use three Record Detail components on a page to display object details for the Account, Case, and Opportunity objects for the user who is logged in to the company's portal. When they drop the components on the page, they are not getting the desired results.

What is causing this issue?

- A. The Record Detail component populates the record associated with the object for the page template so this component will only work on the Home page template
- **B. The Record Detail component populates the recordID associated with the object for the page template, so this component will not work for this use case.**
- C. The Record Detail component is a custom component and was not configured correctly
- D. The Record Detail component will only show record details for the Case object.

Answer: B

Explanation:

The reason for this issue is that the Record Detail component populates the recordID associated with the object for the page template, so this component will not work for this use case. The Record Detail component is a component that displays the fields and values of a record on your Experience Cloud site. The recordID is a unique identifier that specifies which record to display. The Record Detail component uses the recordID associated with the object for the page template, which means that it can only display one record per object per page. For example, if you have a page template for Account, you can only display one Account record on that page using the Record Detail component. To display multiple records of different objects on a page, you need to use other components, such as Related List or Record List.

NEW QUESTION # 142

A consultant for Cloud Kicks (CK) is asked to build a site for CK customers. As part of this site, a custom object will be used to manage customer subscriptions. These subscriptions will need to leverage advanced sharing rules to ensure that only appropriate customers can see these subscriptions.

Which two user license types should be granted to customers to support this sharing requirement?

Choose 2 answers

- **A. Partner Community User**
- **B. Customer Community Plus Login User**
- C. Customer Community Login User
- D. Customer Community User

Answer: A,B

Explanation:

To support the sharing requirement of using advanced sharing rules for the custom object, CK should grant two user license types to customers: Partner Community User and Customer Community Plus Login User.

These license types allow customers to access custom objects and a subset of standard CRM objects, such as accounts, contacts, cases, and dashboards. These license types also support advanced sharing features, such as role hierarchy, sharing rules, manual sharing, and Apex sharing.

NEW QUESTION # 143

.....

In the present market you are hard to buy the valid study materials which are used to prepare the EX-Con-101 certification like our EX-Con-101 latest question. Both for the popularity in the domestic and the international market and for the quality itself, other

kinds of study materials are incomparable with our EX-Con-101 Test Guide and far inferior to them. Our EX-Con-101 certification tool has their own fixed clients base in the domestic market and have an important share in the international market to attract more and more foreign clients.
