

Pass Guaranteed Quiz CDCP - Efficient Certified Data Centre Professional (CDCP) Examinations Actual Questions

What's more, part of that Exam-Killer CDCP dumps now are free: https://drive.google.com/open?id=1EZPzpXhl2_iW3Jb4mZDyvBQG1gFInowB

Having a good command of professional knowledge in this line, they represent the highest level of this CDCP exam and we hired them to offer help for you. They made high-end CDCP preparation exam with one-year supplementary updates one year long. If you want to have free exam questions or lower-priced practice materials, our website provide related materials for you. So their profession makes our CDCP Exam Prep trustworthy.

EXIN CDCP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Raised Floor • Suspended Ceiling: The topic discusses applicable standards, signal reference grid, and disability act and regulations.
Topic 2	<ul style="list-style-type: none"> • Data Centre Location, Building and Construction: It focuses on appropriate sites and components of an effective data centre and supporting facilities setup.
Topic 3	<ul style="list-style-type: none"> • Designing a Scalable Network Infrastructure: It covers ANSI • TIA-942 cabling hierarchy, network redundancy, structured Cabling System, and planning considerations.
Topic 4	<ul style="list-style-type: none"> • Light: This topic covers light fixture types and placement, emergency lighting, and emergency Power Supply (EPS).
Topic 5	<ul style="list-style-type: none"> • Fire Safety • Protection: This topic gives an understanding of standards for fire suppression, detection systems, total flooding fire suppression techniques, and handheld extinguishers. Additionally, it covers Signage and safety.
Topic 6	<ul style="list-style-type: none"> • Physical Security and Safety: Sub-topics are about physical security considerations and physical safety considerations.
Topic 7	<ul style="list-style-type: none"> • Cooling Infrastructure: The topic focuses on liquid immersion cooling, supplemental cooling options, sensible and latent heat definitions, and temperature and humidity recommendations.

- Power Infrastructure: It focuses ATS and STS systems, redundancy levels and techniques, static and dynamic UPS systems, battery types, thermo-graphics, and renewable energy factor (REF).

Pass Guaranteed Quiz High Pass-Rate CDCP - Certified Data Centre Professional (CDCP) Examinations Actual Questions

The EXIN CDCP practice test questions are getting updated on the daily basis and there are also up to 1 year of free updates. Earning the EXIN CDCP certification exam is the way to grow in the modern era with high-paying jobs. The 24/7 support system is available for the customers so that they can get the solution to every problem they face and pass Certified Data Centre Professional (CDCP) (CDCP) exam. You can also evaluate the CDCP prep material with a free demo. Buy Now!

EXIN Certified Data Centre Professional (CDCP) Sample Questions (Q88-Q93):

NEW QUESTION # 88

What is the current recommended temperature for ICT equipment as described in the ASHREA TC 9.9 guideline?

- A. 20-40 °C (68 - 104 °F)
- B. 8-18 C (46.4 -64.4 °F)
- **C. 18-27 C (64.4 - 80.6°F)**
- D. 25-45 °C (77 - 113 °F)

Answer: C

Explanation:

The current recommended temperature for ICT equipment as described in the ASHRAE TC 9.9 guideline is 18-27 C (64.4 - 80.6°F). This is the recommended range for the dry-bulb temperature at the inlet of the servers, which is the most critical parameter for ensuring the optimal performance and reliability of the ICT equipment. The recommended range is based on the thermal specifications of the majority of the ICT equipment in the market, as well as the energy efficiency and environmental considerations of the data centre cooling systems. The recommended range is suitable for Classes A1 to A4 of the ASHRAE thermal guideline classes, which cover different types and generations of ICT equipment.

5: Does your Data Center Follow ASHRAE TC 9.9 Thermal Guidelines for Data Processing Environments?6, page 1, section 1

NEW QUESTION # 89

Which type of Fire Detection Device is recommended for protecting a Data Center?

- **A. Smoke detector**
- B. None of the above
- C. Flame detector
- D. Heat detector

Answer: A

Explanation:

According to the CDCP® Preparation Guide, smoke detectors are the most common type of fire detection devices used in data centers, as they can detect a fire in its early stages and provide early warning to the occupants and authorities. Smoke detectors can be either spot-type or air-aspirating, depending on the design and goals of the data center. Spot-type detectors are inexpensive and simple, but may cause activation delay and false alarms. Air-aspirating detectors are more sensitive and reliable, but may require more maintenance and installation costs. Both types of detectors should be installed in accordance with the relevant standards and codes, such as NFPA 72 and EN 54.

NEW QUESTION # 90

Escape route signage should be placed where?

- A. Only at the main entrance of the data centre building
- B. At every door including riser doors, doors of storage closets etc.
- **C. At every door providing a pathway**
- D. Only at emergency escape doors

Answer: C

Explanation:

Escape route signage should be placed at every door providing a pathway to the exit or the assembly area, according to the CDCP Preparation Guide¹ and the EU Safety/Health Signs Directive². Escape route signage is used to guide the occupants of the data centre from wherever they are in the building, via a place of relative safety (the escape route), to the place of ultimate safety (the assembly area). Escape route signage should not be limited to only emergency escape doors or the main entrance of the data centre building, as these may not be accessible or visible from all locations. Escape route signage should also not include doors that do not lead to the exit or the assembly area, such as riser doors, doors of storage closets, or doors of other rooms, as these may confuse or mislead the occupants. Escape route signage should be placed at every door that provides a pathway to the exit or the assembly area, and should indicate the direction and distance of the escape route using pictograms, arrows, and words. Escape route signage should also be designed and installed in accordance with the relevant standards and codes, such as BS 5499 and ISO 7010.

NEW QUESTION # 91

What is the minimum clearance space required below water sprinkler heads and nozzles of gas-based fire suppression systems?

- A. 120 cm / 47 inches
- **B. 46 cm / 18 inches**
- C. 64 cm / 25 inches
- D. 60 cm / 24 inches

Answer: B

Explanation:

The minimum clearance space required below water sprinkler heads and nozzles of gas-based fire suppression systems is 46 cm / 18 inches, according to the CDCP Preparation Guide¹ and OSHA regulation 29 CFR

1910.159 (10)². This clearance space is necessary to ensure that the sprinkler spray or gas discharge can reach the fire and cover the protected area effectively. Any material or obstruction below this clearance space can interfere with the sprinkler or gas distribution and reduce the fire suppression performance. Therefore, building owners and managers should ensure that all storage and objects in the data centre are kept below this clearance space, and that the clearance space is maintained at all times.

NEW QUESTION # 92

Which one of the following represents the three elements (oxygen, heat and fuel) to interact in order for the fire to exist?

- A. The Fire Hexagon
- B. The Fire Class
- **C. The Fire Triangle**
- D. The Fire Technology

Answer: C

Explanation:

The fire triangle is a simple model that illustrates the three elements a fire needs to ignite: heat, fuel, and an oxidizing agent (usually

oxygen). A fire naturally occurs when the elements are present and combined in the right mixture. A fire can be prevented or extinguished by removing any one of the elements in the fire triangle.
