我們的Appian ACD201 認證考試的最新培訓資料是Fast2test的專業團隊不斷地研究出來的，可以幫很多人成就夢想。在現在的競爭激烈的IT行業中，想要穩固自己的地位，就得向專業人士證明自己的知識和技術水準。Appian ACD201 認證考試是一個很好的證明自己能力的考試。有了Appian ACD201認證證書，你工作會有很大的變化，工資和工作職位都會有所提升。

Appian ACD201 考試大綱：

主題	簡介
主題 1	<ul style="list-style-type: none">Advanced Appian Concepts: This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.
主題 2	<ul style="list-style-type: none">Performance and Scalability: This section of the exam measures the skills of Appian Developers and covers designing performant components, building memory-efficient models, conducting database load and automated testing, analyzing server memory and logs for risks, and resolving performance concerns for end users.

主題 3	<ul style="list-style-type: none"> Application Design and Development: This section of the exam measures the skills of Appian Developers and covers translating business requirements into user stories, building end-to-end applications, managing object security, applying design best practices, and ensuring user-centric experiences through proper UX design.
主題 4	<ul style="list-style-type: none"> Data Management: This section of the exam measures the skills of Solution Architects and covers designing and documenting data models, recommending record types for optimization and security, working with relational data, and implementing complex models with supporting objects.

ACD201考題寶典，ACD201問答，ACD201免費下載

Fast2test作為專門提供ACD201認證考試相關資料的提供者，一直以來都把為考生們提供最優秀的資料作為自己的目標。與其他網站相比，Fast2test更得大家的信任。這是為什麼呢？因為Fast2test有著多年的經驗，並且一直專心致力於ACD201認證考試的研究，總結出了很多關於考試的規律。這樣，Fast2test的資料就可以有很高的命中率。這也保證了大家的考試的合格率。所以Fast2test得到了大家的信任。

最新的 Senior Developer ACD201 免費考試真題 (Q77-Q82):

問題 #77

The synced record Task has a self-referential relationship defined in the column parentTaskId. There is a many-to-one record relationship between the id and parentTaskId called parentTask.

For a given task ID, you need to return the task name and the parent task name.

What should you do?

- A. Create a sync-time custom record field on the Task record called parentName. Specify this field to return in the query field selection.
- B. Use `a!queryRecordType()` With a filter on the task id, with fields specified to return `recordType!Task.name` and `recordType!Task.parentTask.name`.
- C. Use `a!queryRecordType()` filtered on the task id once to return the task name and parent task ID. Query the record again to return the parent task name.

答案： B

解題說明:

A single `a!queryRecordType()` call filtered by the task's id and selecting both `recordType!Task.name` and `recordType!Task.parentTask.name` leverages the existing self-referential relationship, returning the task name and its parent's name in one efficient query without additional custom fields or extra queries.

問題 #78

You need to add test cases to an existing expression rule in the system. Expression rule gives a complex data type value as an output result.

The test case should pass only when a field in the resultant data matches with a specific value mentioned.

How should you configure the test case assertion?

- A. Assertion expression evaluates to True.
- B. Test completes without errors.
- C. Test output matches the asserted output.

答案： A

解題說明:

Configuring the test case assertion so that the assertion expression evaluates to True allows you to specifically check whether the desired field in the complex data type result matches the required value.

問題 #79

You're designing a file upload process that integrates with an external document management system.

Part of this process is to develop a start form with a file upload component, so that the user can upload multiple files.

The business has requested that the maximum file size that can be uploaded through this process is 1GB. Additionally, you're aware that the integration's API can accept files with a maximum file size of 3GB, but recommends no larger than 1GB.

Can the process be more performant without straining the application or integration?

- A. Yes. Request the business reconsiders its requirements and find manual workarounds as it is not recommended to upload files of this size in both Appian and the integration.
- **B. Yes. Request the business allows for these files to be uploaded as an overnight process by storing large files in a staging table, so that adequate resources are available.**
- C. No. The file upload component is capable of accepting 1 GB files and the integration can handle this.

答案: B

解題說明:

While Appian and the integration technically support 1 GB file uploads, handling such large files during interactive sessions can negatively impact application performance, user experience, and resource utilization.

A better approach is to request that the business allow these files to be uploaded asynchronously (e.g., overnight batch process), by temporarily storing them (e.g., in a staging table or folder) and processing them when system load is lower. This makes the process more performant and reliable without straining Appian or the external system.

問題 #80

A local variable is reevaluated every time a form loads and you notice subsequent slow performance of the form.

Which two steps could you perform to optimize this? (Choose two.)

- **A. Ensure the local variable only updates when a referenced variable is modified or when it's being updated in the saveInto parameter of a component.**
- **B. Avoid executing queries every time a form reevaluates.**
- C. Ensure the local variable is refreshed after a specified interval, and not refreshed when referenced variable are changed.
- D. Create a local variable inside with () for faster reevaluation.

答案: A,B

解題說明:

Avoiding queries on every form reevaluation prevents unnecessary data retrieval and improves form performance.

Ensuring the local variable only updates when necessary (e.g., on relevant variable changes or via saveInto) reduces redundant recalculations and optimizes responsiveness.

問題 #81

You need to configure your process model to store the result of an expression rule for every item in a list.

Your design must have the smallest memory footprint.

What should you do?

- **A. Configure a script task to use a!forEach() to iterate over each item in the list.**
- B. Create a loop of smart service nodes in the process model and execute it for each item in the list.
- C. Invoke a sub-process for each item in the list.
- D. Execute MNI over a script task for each item in the list.

答案: A

解題說明:

Configuring a script task to use a!forEach() to iterate over each item in the list allows you to process all items within a single task, minimizing the memory footprint compared to multiple subprocesses or smart service loops.

問題 #82

.....

在這個競爭激烈的IT行業中，擁有一些認證證書是可以幫助你步步高升的。很多公司升職加薪的依據就是你擁有的認證證書的含金量。Appian ACD201認證考試就是個含金量很高的考試。Appian ACD201 認證證書能滿足很多正在IT行業拼搏的人的需求。Fast2test可以為你提供Appian ACD201認證考試的針對性訓練。你可以先在網上免費下載Fast2test為你提供的關於Appian ACD201 認證考試的培訓工具的試用版和部分練習題及答案作為嘗試。
