NEW QUESTION # 38

What are the key characteristics of a Bluefield deployment scenario? (Select 2 correct answers)

- A. Many team members have a naive perception of deploying software solutions
- B. The Test site has been configured using the SAP Bluefield template
- C. The customer already has an SAP Ariba Strategic Sourcing suite solution deployed
- D. The Production site may have live transactions

Answer: C,D

Explanation:

A Bluefield deployment means the customer already has an SAP Ariba solution deployed (B), and the production system may be live with ongoing transactions (C). This requires careful, incremental migration to avoid disruption. There is no specific "Bluefield template" for test sites (D), and team perceptions (A) are irrelevant.

NEW QUESTION # 39

When you have created a new custom field and marked it as reportable, saved and published your changes, the field does not show up in your reports. How can you resolve the issue?

- A. You need to wait 2 hours for the schema to refresh. Any change to the object model will be automatically synchronized to SAP Ariba Analytics on regular intervals
- B. You created the custom field in a different module. Custom fields must be created in the same module where the reports are generated to show up correctly.
- C. You did not assign the custom field to the appropriate report category. Ensure that the field is linked to the correct category for it to appear in reports.
- D. You forgot to run the task Retrieve flexible fields metadata for reporting under Manage > Administration > Reporting Manager > Flex Field Reporting

Answer: D

- A. SAP Ariba Enablement Workbook
- B. SAP for Me

- C. SAP Cloud Project Studio
- D. SAP Cloud Application Lifecycle Management

Answer: A

Explanation:

The SAP Ariba Enablement Workbook is an Excel-based project management tool provided free by SAP to assist customers and implementation partners in deploying SAP Ariba solutions. It contains detailed task lists, timelines, and activities aligned to the SAP Activate methodology and is designed to guide project teams through deployment steps such as data collection, configuration, and testing. Other options like SAP for Me are customer portals, not deployment tools, and SAP Cloud Application Lifecycle Management is a broader lifecycle tool not focused specifically on Ariba deployments.
