Network Appliance NetApp Storage Installation Engineer, ONTAP Professional Exam Sample Questions (Q90-Q95):

NEW QUESTION # 90

What is the purpose of a mailbox disk?

- A. Shipping defective drives
- B. Sending AutoSupport mail
- C. Logging
- **D. Storing HA partner information**

Answer: D

Explanation:

Mailbox disks store HA metadata and partner state information required for takeover and giveback operations.

NEW QUESTION # 91

What is a valid failover policy for a SAN LIF?

- **A. disabled**
- B. system-defined
- C. local-only
- D. broadcast-domain-wide

Answer: A

Explanation:

In ONTAP SAN concepts, SAN LIFs (used for iSCSI, FC, NVMe/FC) behave differently from NAS LIFs.

SAN access relies on multipathing at the host level, not LIF failover within the storage system. Because of this architectural design, SAN LIFs are configured with a failover policy of disabled.

When a SAN LIF goes offline, ONTAP does not move the LIF to another port. Instead, the host multipathing software (such as ALUA for iSCSI or FC multipath drivers) redirects I/O to another available path. This design ensures predictable path behavior and avoids unexpected changes that could confuse host multipathing logic.

Failover policies such as broadcast-domain-wide or local-only are valid only for NAS or management LIFs.

The system-defined option is not a valid failover policy value.

Therefore, the only valid failover policy for a SAN LIF is disabled, making A the correct answer.

NEW QUESTION # 92

You are asked to install six shelves to a production cluster. The cluster is running clustered Data ONTAP and is a 4-node cluster. All six shelves will be cabled to the same HA pair. The customer wants you to assign all the new disks to a single node in the cluster. Which three tools would help you accomplish this task? (Choose three.)

- **A. the Config Advisor application**
- B. the System Setup application
- C. the My AutoSupport Web-based tool
- **D. the Synergy application**
- **E. the Hardware Universe Web-based tool**

Answer: A,D,E

Explanation:

Installing and assigning new disk shelves in a production ONTAP cluster requires careful planning and validation. Three NetApp tools directly support this task.

The Hardware Universe provides authoritative hardware compatibility and cabling guidance. It confirms which shelves, disk types, and cabling methods are supported for the specific controller platform and HA configuration.

The Synergy application is used during installation to generate structured workflows, configuration guidance, and documentation that assist with shelf installation and disk assignment planning.

Config Advisor is essential after installation to validate shelf cabling, disk visibility, ownership, and HA pathing. It detects misconfigurations that could prevent proper disk assignment or create unsupported states.

My AutoSupport is used for telemetry and case management, not installation tasks. System Setup is used for initial cluster creation, not advanced shelf assignment planning.

Thus, the correct tools are A, D, and E.

NEW QUESTION # 93

Where is user data (file access) written to by default?

- A. Aggr0_root
- B. Vol0_root
- C. SVM volume
- D. mailbox disks

Answer: C

Explanation:

User data in ONTAP is written to volumes owned by Storage Virtual Machines (SVMs). Root aggregates and root volumes are reserved for system metadata and ONTAP operations. Mailbox disks store HA metadata only.

Therefore, user data is written to an SVM volume.

NEW QUESTION # 94

You have completed a base installation and system registration of an AFF A250 system, but you notice that you have one failed drive. Neither un-failing nor reseating the drive repaired it.

In this scenario, which two actions should you take? (Choose two.)

- A. Ask the customer to open a technical case with NetApp Support.
- B. Run Active IQ Config Advisor to collect all the logs on the system.
- C. Ask the customer for a drive with the same capacity and replace it.
- D. Power off the system until the drive has been replaced.

Answer: A,B
