The Best Apple Reliable DEP-2025 Dumps Ppt & Perfect TestsDumps - Leading Offer in Qualification Exams

1.What links a device to an MDM solution?
A. APNs
B. A firewall
C. A restriction
D. An enrollment profile
Answer: D
Explanation:
Mobile Device Management (MDM) solutions are used to manage and secure Apple devices remotely. To link a device to an MDM solution, an enrollment profile is required. This profile is a configuration file that, once installed on the device, establishes a connection between the device and the MDM server, allowing the server to send commands and policies to the device. The enrollment profile contains information such as the MDM server's URL and authentication details, enabling secure communication via Apple Push Notification service (APNs). While APNs (option A) facilitates communication between the MDM server and the device after enrollment, it is not the mechanism that links the device to the MDM solution. A firewall (option B) is a network security tool and unrelated to linking a device to MDM, and a restriction (option C) is a policy applied via MDM, not the linking mechanism itself. According to Apple's official documentation, such as the Apple Platform
Deployment Guide, the enrollment profile is the foundational step for MDM enrollment.
Reference: Apple Platform Deployment Guide (Chapter: Mobile Device Management).

2.What does MDM need to operate, specifically for APNs and SSL?
A. Certificates
B. Restrictions
C. Enrollment profiles
Answer: A
Explanation:
For an MDM solution to operate effectively, it relies on certificates, particularly for secure communication with Apple Push Notification service (APNs) and for establishing encrypted connections via SSL/TLS. An APNs certificate is required to authenticate the MDM server with Apple's APNs infrastructure, enabling it to send push notifications to managed devices. Additionally, an SSL certificate secures the communication channel between the MDM server and the devices, ensuring data privacy and integrity. Restrictions (option B) are policies enforced by MDM but are not prerequisites for its operation. Enrollment profiles (option C) are necessary to link devices to MDM, as discussed in Question 1, but they do not specifically address the APNs and SSL requirements. Apple's documentation, such as the MDM Protocol Reference, explicitly states that certificates are essential for APNs and SSL functionality in MDM deployments.
Reference: MDM Protocol Reference (Section: Certificates and Authentication).

3.Which Apple device capability allows MDM to secure devices?
A. Location Services
B. Enrollment profiles
C. Built-in device security features
Answer: C
Explanation:

Authoritative Reliable DEP-2025 Dumps Ppt Supply you Trusted Latest Test Simulator for DEP-2025: Apple Deployment and Management Exam to Prepare easily

DEP-2025 practice materials stand the test of time and harsh market, convey their sense of proficiency with passing rate up to 98 to 100 percent. They are 100 percent guaranteed DEP-2025 practice materials. And our content of them are based on real exam by whittling down superfluous knowledge without delinquent mistakes. Our DEP-2025 practice materials comprise of a number of academic questions for your practice, which are interlinked and helpful for your exam. So their perfection is unquestionable.

Apple Deployment and Management Exam Sample Questions (Q170-Q175):

NEW QUESTION # 170
A user signed in to their iPhone with their personal Apple Account in Settings. Then they enrolled the same iPhone using their Managed Apple Account. iCloud is enabled in the organization and the user turned on iCloud Drive. Which of these could be a result? Choose the best answer.

- A. The user is prompted to keep personal iCloud Drive data or remove it from iPhone
- B. An additional iCloud Drive appears in Files
- C. Personal iCloud Drive data is merged with organization data
- D. The personal iCloud Drive is unavailable until the device is unenrolled

Answer: B

Explanation:
With User Enrollment, personal and managed iCloud Drives coexist separately. The iOS Deployment Reference explains, "When a device is enrolled with a Managed Apple ID via User Enrollment and iCloud Drive is enabled, an additional iCloud Drive appears in the Files app, separating personal data (linked to the personal Apple ID) from managed data (linked to the Managed Apple ID)." Option B is incorrect as data doesn't merge, C is false as personal data remains accessible, and D doesn't occur during this process. Reference:
iOS Deployment Reference, "User Enrollment and iCloud" section.
Apple Platform Deployment Guide, "Data Separation with iCloud" section.

NEW QUESTION # 171
Which feature allows IT administrators to manage Bluetooth settings on a device?

- A. Find My
- B. iCloud
- C. MDM
- D. Configuration profiles

Answer: D

Explanation:
Configuration profiles allow IT administrators to manage Bluetooth settings, such as disabling Bluetooth entirely or restricting pairing with specific devices, enhancing security and compliance. These profiles are deployed via MDM or manually. Find My (option B) and iCloud (option C) are unrelated to Bluetooth management. MDM (option D) delivers profiles, but the profiles define the settings. The Apple Platform Deployment Guide details Bluetooth configuration via profiles.
Reference: Apple Platform Deployment Guide (Chapter: Configuration Profiles).

NEW QUESTION # 172
How can you identify if a Rapid Security Response was applied to iOS?

- A. The letters "cve" are appended to the operating system version
- B. A single-letter identifier is appended to the operating system version
- C. A single-digit identifier is appended to the operating system version
- D. The letters "rst" are appended to the operating system version

Answer: B

Explanation:
Rapid Security Responses use a letter identifier. The iOS Deployment Reference states, "A Rapid Security Response appends a single-letter identifier, such as '(a)', to the iOS version number (e.g., iOS 16.4.1 (a)) to indicate its application." References:
iOS Deployment Reference, "Software Updates" section.

Apple Platform Security Guide, "Rapid Security Response" section.

NEW QUESTION # 173
Which feature allows IT administrators to manage location settings on a device?

- A. Find My
- B. iCloud
- C. MDM
- D. Configuration profiles

Answer: D

Explanation:
Configuration profiles allow IT administrators to manage location settings on a device, such as enabling/disabling Location Services, restricting app access to location data, or enforcing privacy settings. These profiles are deployed via MDM or manually. Find My (option B) uses location for tracking but isn't a management tool. iCloud (option C) is unrelated to location management. MDM (option D) delivers profiles, but the profiles define the settings. The Apple Platform Deployment Guide details location control via profiles.

NEW QUESTION # 174
What's the benefit of using Find My?

- A. Allows device tracking
- B. Enables additional restrictions
- C. Improves network performance
- D. Separates personal and managed data

Answer: A

Explanation:
Find My allows device tracking, enabling users or administrators (via MDM) to locate, lock, or wipe a lost or stolen device using iCloud or GPS. It's a key security feature for personal and managed devices. Additional restrictions (option B) are a supervision feature. Network performance (option C) is unrelated, and data separation (option D) pertains to User Enrollment. The Apple Platform Security Guide emphasizes tracking as Find My's primary benefit.
Reference:Apple Platform Security Guide(Section: Find My).

NEW QUESTION # 175
