New CCAAK Test Experience | Standard CCAAK Answers

ITExamSimulator CCAAK Web-Based Practice Test: For the Confluent Certified Administrator for Apache Kafka (CCAANK) web-based practice exam no special software installation is required. Because it is a browser-based Confluent CCAAK practice test. The web-based Confluent Certified Administrator for Apache Kafka (CCAANK) practice exam works on all operating systems like Mac, Linux, iOS, Android, and Windows. In the same way, IE, Firefox, Opera and Safari, and all the major browsers support the web-based CCAAK practice test.

Confluent Certified Administrator for Apache Kafka Sample Questions (Q52-Q57):

NEW QUESTION # 52

What are benefits to gracefully shutting down brokers? (Choose two.)

- A. It will balance the partitions across brokers before restarting.
- B. It will migrate any partitions the server is the leader for to other replicas prior to shutting down.
- C. It will sync all its logs to disk to avoid needing to do any log recovery when it restarts.
- D. It will automatically re-elect leaders on restart.

Answer: B,C

Explanation:

A graceful shutdown ensures that logs are flushed to disk, minimizing recovery time during restart.

Kafka performs controlled leader migration during a graceful shutdown to avoid disruption and ensure availability.

NEW QUESTION # 53

You have a Kafka cluster with topics t1 and t2. In the output below, topic t2 shows Partition 1 with a leader "-1".

What is the most likely reason for this?

...

```
$ kafka-topics --zookeeper localhost:2181 --describe --topic t1
```

```
Topic:t1 PartitionCount 1 ReplicationFactor 1 Configs:
```

```
Topic: t1 Partition: 0 Leader: 0 Replicas: 0 Isr: 0
```

```
$ kafka-topics --zookeeper localhost:2181 --describe --topic t2
```

```
Topic:t2 PartitionCount 2 ReplicationFactor 1 Configs:
```

```
Topic: t2 Partition: 0 Leader: 0 Replicas: 0 Isr: 0
```

```
Topic: t2 Partition: 1 Leader: -1 Replicas: 1 Isr:
```

- A. Broker 1 failed.
- B. Leader shows "-1" while the log cleaner thread runs on Broker 1.
- C. Compression has been enabled on Broker 1.
- D. Broker 1 has another partition clashing with the same name.

Answer: A

Explanation:

A Leader of -1 indicates that no broker is currently the leader for that partition. This usually happens when the only replica for that partition is unavailable, often due to the associated broker (in this case, Broker 1) failing or being offline. Kafka cannot elect a leader if no replica is in the in-sync replica (ISR) list, which leads to leader = -1.

NEW QUESTION # 54

A broker in the Kafka cluster is currently acting as the Controller.

Which statement is correct?

- A. All consumers are allowed to fetch messages only from this server.
- B. It is responsible for sending leader information to all producers.
- C. It can have topic partitions.
- D. It is given precedence for replication to and from replica followers.

Answer: C

Explanation:

The Controller broker is a regular broker that also takes on additional responsibilities for managing cluster metadata, such as leader elections and partition assignments. It still hosts topic partitions and participates in replication like any other broker.

NEW QUESTION # 55

Which model does Kafka use for consumers?

- A. Pull
- B. Enrollment
- C. Publish
- D. Push

Answer: A

Explanation:

Kafka uses a pull model for consumers, where consumers poll the broker to retrieve messages at their own pace. This model gives consumers more control over flow and backpressure, improving scalability and reliability.

NEW QUESTION # 56

Your Kafka cluster has four brokers. The topic t1 on the cluster has two partitions, and it has a replication factor of three. You create a Consumer Group with four consumers, which subscribes to t1.

In the scenario above, how many Controllers are in the Kafka cluster?

- A. two
- B. three
- **C. One**
- D. Four

Answer: C

Explanation:

In a Kafka cluster, only one broker acts as the Controller at any given time. The Controller is responsible for managing cluster metadata, such as partition leadership and broker status. Even if the cluster has multiple brokers (in this case, four), only one is elected as the Controller, and others serve as regular brokers. If the current Controller fails, another broker is automatically elected to take its place.

NEW QUESTION # 57

.....

Everybody hopes he or she is a successful man or woman no matter in his or her social life or in his or her career. Thus owning an authorized and significant CCAAK certificate is very important for them because it proves that he or she boosts practical abilities and profound knowledge in some certain area. Passing CCAAK Certification can help they be successful and if you are one of them please buy our CCAAK guide torrent because they can help you pass the CCAAK exam easily and successfully.
