The CISM certification is highly sought after by employers as it demonstrates that the candidate has the necessary skills and knowledge to manage and oversee information security programs. Certified Information Security Manager certification is particularly relevant in today's world as organizations face an increasing number of cyber threats and data breaches. Employers are looking for professionals who can protect their organizations from such threats and ensure that their information and assets are secure.

The CISM Exam is a certification program offered by ISACA that is designed to validate a professional's skills and knowledge in information security management. CISM exam covers four domains that provide a comprehensive framework for managing and implementing effective information security programs. Passing the exam is a globally recognized certification that demonstrates a professional's ability to manage information security risks and provide value to their organization.

## ISACA Certified Information Security Manager Sample Questions (Q21-Q26):

### NEW QUESTION # 21

Which of the following is MOST critical for responding effectively to security breaches?

- A. Evidence gathering
- B. Management communication

- C. Root cause analysis
- D. Counterattack techniques

**Answer: C**

#### NEW QUESTION # 22

An information security manager wants to upgrade an organization's workstations to a new operating system version. Which of the following would be MOST helpful to gain senior management support for the upgrade?

- A. A summary of performance improvements in the new operating system
- B. The results of user surveys indicating issues with the current operating system
- C. A list of the latest security features in the new operating system
- D. An assessment of the current operating system based on risk

**Answer: D**

Explanation:

An assessment of the current operating system based on risk (A) is most effective for gaining senior management support because CISM emphasizes risk-based decision-making at the executive level. Senior management is primarily concerned with exposure, potential impact, and alignment with risk appetite-not technical features or user convenience. Performance improvements (B), user surveys (C), and feature lists (D) provide supporting detail but do not clearly articulate business risk. A risk-based assessment demonstrates why the upgrade is necessary to reduce unacceptable risk.

#### NEW QUESTION # 23

The PRIMARY objective of a post-incident review of an information security incident is to:

- A. update the risk profile
- B. determine the impact
- C. minimize impact
- D. prevent recurrence.

**Answer: D**

Explanation:

post-incident review of an information security incident is a process that aims to identify the root causes, contributing factors, and lessons learned from the incident, and to implement corrective and preventive actions to avoid or mitigate similar incidents in the future. The primary objective of a post-incident review is to prevent recurrence, as it helps to improve the security posture, awareness, and resilience of the organization. Preventing recurrence also helps to reduce the impact and cost of future incidents, as well as to enhance the reputation and trust of the organization. Updating the risk profile, minimizing impact, and determining the impact are not the primary objectives of a post-incident review, although they may be part of its outcomes or outputs. References = CISM Review Manual, 16th Edition, page 1011

#### NEW QUESTION # 24

An information security manager wants to document requirements detailing the minimum security controls required for user workstations. Which of the following resources would be MOST appropriate for this purpose?

- A. Procedures
- B. Standards
- C. Guidelines
- D. Policies

**Answer: B**

Explanation:

Standards are detailed statements of the minimum requirements for hardware, software, or security configurations. They are used to define the minimum security controls required for user workstations. References = CISM Review Manual, 16th Edition, page 69.
