SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition Sample Questions (Q13-Q18):

NEW QUESTION # 13

Which of the following would prevent SAP from running a Post-Upgrade Test (PUT) on a customer's behalf?

Note: There are 2 correct answers to this question.

- A. The process steps have been reordered.
- **B. The test process failed the execution pre-check.**
- C. Data marked for deletion is picked for execution.
- **D. An execution variant has not been maintained.**

Answer: B,D

Explanation:

The following would prevent SAP from running a Post-Upgrade Test (PUT) on a customer's behalf:

* An execution variant has not been maintained: An execution variant is a set of test data that is used to execute a test process. It contains the input values and expected results for each test step. If an execution variant is not maintained for a test process, the system cannot run the test automatically and will skip it1.

* The test process failed the execution pre-check: The execution pre-check is a validation that is performed before the test execution to ensure that the test process and the execution variant are consistent and complete. If the execution pre-check fails, it means that there are some issues or gaps in the test process or the execution variant that need to be resolved before the test can be run2.

The following would not prevent SAP from running a Post-Upgrade Test (PUT) on a customer's behalf:

* Data marked for deletion is picked for execution: Data marked for deletion is data that is no longer relevant or valid for the test process. It can be marked for deletion by the customer or by SAP. However, this does not affect the test execution, as the system will ignore the data marked for deletion and use the available data for the test process3.

* The process steps have been reordered: The process steps are the individual actions that are performed as part of the test process. They can be reordered by the customer or by SAP to reflect the changes in the business process or the user interface. However, this does not affect the test execution, as the system will follow the order of the process steps as defined in the test process4.

NEW QUESTION # 14

You are using the Test Automation Tool.
When do you define a data variant?

- A. After customizing a test process.
- B. After creating a test plan.
- C. After binding a process step field to a Test Data Container.
- **D. After providing consent for Post-Upgrade Testing.**

Answer: D

NEW QUESTION # 15

Which of the following analyses can you create from the Manage KPIs and Reports app? Note: There are 3 correct answers to this question.

- **A. Review Booklets**
- B. Object Views
- C. Lumira Dashboards
- **D. SAC Stories**
- **E. Multidimensional Reports**

Answer: A,D,E

Explanation:

The Manage KPIs and Reports app is a single platform for creating all analytical applications using KPIs, reports, multidimensional reports, and stories. You can create applications that can be launched directly from SAP Fiori launchpad. The app is integrated with SAP Analytics Cloud, which allows you to create and view stories. A story is a presentation-style document that uses charts, tables, and other visualizations to display data insights. A review booklet is a collection of stories that can be used to share information with stakeholders. A multidimensional report is a type of report that allows you to analyze data from multiple dimensions and measures. You can create and view multidimensional reports from the app. An object view is a type of report that displays data for a single object, such as a customer or a product. You cannot create or view object views from the app. A Lumira dashboard is a type of dashboard that uses SAP Lumira to create and display data visualizations. You cannot create or view Lumira dashboards from the app. References = Manage KPIs and Reports, Stories, Review Booklets, [Multidimensional Reports]

NEW QUESTION # 16

What is the correct release code for the second feature delivery in February 2025?

- A. 2025.2
- B. 2025.2.2
- C. 0
- **D. 2502.2**

Answer: D

NEW QUESTION # 17

Which of the following are examples of indirect digital access? Note: There are 2 correct answers to this question.

- A. An unattended bot in SAP Build Process Automation
- **B. A Defect document created through an industry application**
- **C. A Time Sheet Record from a 3rd party application**
- D. A Production Order created through a non-SAP front-end

Answer: B,C

Explanation:

Indirect digital access occurs when humans, devices, or systems use the digital core indirectly through non-SAP intermediary software, such as a non-SAP front end, a custom-solution, or any other non-SAP application¹. Indirect digital access is measured by the number of documents created, updated, or deleted in the SAP system as a result of the indirect use². Examples of indirect
