## 최신 Accredited Professional Process-Automation 무료샘플문제 (Q53-Q58):

질문 # 53  
What are three basic building blocks of Salesforce Flow?

- A. Element
- B. Variables
- C. Constants
- D. Connector
- E. Resource

정답 A,D,E

질문 # 54  
Which Process Builder component determines when a process runs?

- A. Action
- B. Screen
- C. Criteria
- D. Trigger

정답 D

질문 # 55  
Which of the following three statements are correct regarding Flow interviews?

- A. A flow interview always runs n single instance of n flow.
- B. Any flow interviews that are not in use should be deleted go that user's pending list includes only interviews that they ..
- C. A single flow can have up to 50 different versions.
- D. Only those flow interviews can be deactivated that have been paused at least once.
- E. Users can use browser's Back or Forward buttons to navigate through a flow

정답 D

질문 # 56  
How many active versions of a flow can you have at a given time?

- A. 0
- B. Unlimited
- C. 1
- D. 2

정답 A

## HP HPE7-J02 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> <li>• Advanced Troubleshooting and Prevention: This section focuses on the ability of Support Engineers to identify root causes of issues and implement advanced preventive measures. It emphasizes building resilience in customer environments to minimize future disruptions.</li> </ul>

주제 2	<ul style="list-style-type: none"> <li>Storage Access and Data Protection: This part of the exam tests the expertise of Infrastructure Engineers in configuring storage access, provisioning capacity, and applying replication policies. It also covers disaster recovery validation and role-based access control to secure storage operations.</li> </ul>
주제 3	<ul style="list-style-type: none"> <li>Competitive Positioning of HPE Storage: This part of the exam focuses on the ability of Trusted Advisors to identify competitive opportunities for HPE Storage solutions. It requires articulating HPE's strengths in comparison to multi-vendor environments, customer needs, and market trends, helping customers make informed technology choices.</li> </ul>
주제 4	<ul style="list-style-type: none"> <li>HPE Storage Portfolio and Strategy: This domain measures the knowledge of Solution Advisors in positioning HPE's Storage portfolio within enterprise infrastructure. Candidates must understand HPE Storage hardware, procurement options, available tools, and the overarching storage strategy, including its relevance to enterprise-scale solutions.</li> </ul>
주제 5	<ul style="list-style-type: none"> <li>Planning and Validating Storage Solutions: This section assesses the role of Storage Consultants in evaluating complex, multi-vendor environments. Candidates will demonstrate their ability to plan, size, and validate storage solutions tailored for enterprise workloads, ensuring proposals meet customer requirements effectively.</li> </ul>

### 최신 HPE Storage Solutions HPE7-J02 무료샘플문제 (Q34-Q39):

#### 질문 # 34

You are sizing an HPE Alletra Storage MP B10000 as shown in the graphic below.  
What change must be made to the current storage configuration to achieve maximum IOPS performance?

- A. No change needed - the system is already operating at maximum performance
- B. The controller must be upgraded to a 32-core model
- C. Additional network cards or HBAs need to be added for more throughput
- D. Additional disks need to be added to the system

정답: A

#### 설명:

Detailed Explanation:

Rationale for Correct Answer:

From the exhibit, the system shows maximum estimated IOPS performance (over 250K IOPS read, 115K IOPS mixed, 62K write). These values align with HPE's published performance specifications for this model with full cores enabled. The network interface count and disk count are balanced relative to controller capability. Therefore, no further upgrades are required to achieve maximum performance.

Distractors:

A: Adding NICs/HBAs may improve throughput but will not exceed controller-bound IOPS.

B: Adding disks increases capacity, not peak IOPS, as performance is primarily controller-driven.

D: The system already matches controller capability; upgrading cores is not an option in Alletra MP B10000 mid-range systems.

Key Concept: Understanding performance sizing based on controller and architecture limits, not just capacity or NICs.

Reference: HPE Alletra MP Performance and Sizing Guide.

#### 질문 # 35

Refer to the exhibit.

□ Your customer had an unexpected failure of their current storage array, causing them to lose some of their critical data. As a result, they are looking for a storage array with a guarantee of 100% data availability to prevent this failure and loss in the future. They need 80TB raw and two new 25GbE top-of-rack switches to connect to their environment. They expect 5% annual growth. Which correction should be made to the configuration in the exhibit to meet the customer's requirements?

- A. Decrease to 20 × 3.84TB drives
- B. HPE GreenLake financial model
- C. Add 2× Aruba 8325 switches
- **D. Change to 25G networking**

**정답: D**

**설명:**

Detailed Explanation:

Rationale for Correct Answer:

The exhibit shows the use of 32Gb FC HBAs and 100GbE switches (Aruba 100G). However, the customer specifically requires 25GbE top-of-rack switches. Therefore, the configuration needs to be corrected to 25GbE networking. The HPE Alletra MP B10000 guarantees 100% data availability SLA, so the primary correction is networking alignment, not drives or financial model.

Distractors:

B: Reducing drives reduces raw capacity below 80TB requirement.

C: GreenLake is a consumption model but not the technical correction required.

D: Aruba 8325 is a core switch option; customer only asked for ToR 25GbE.

Key Concept: Networking alignment with requirements.

Reference: HPE Alletra MP Ordering and Configuration Guide.

### **질문 # 36**

Your customer has 2 Alletra 6000 arrays configured for asynchronous replication. The facilities team is planning grid maintenance in the datacenter hosting the source array. They want to proactively move all host I/O to the target array. Which action needs to be done on the Alletra group level to move the host I/O to the other datacenter?

- A. Promote
- B. Handover
- **C. Failover**
- D. Demote

**정답: C**

### **질문 # 37**

Your customer has expressed an interest in an HPE CloudPhysics assessment of their environment. They would like to know what to expect from this process.

Which of the following statements is true of a CloudPhysics assessment?

- A. An auto-generated token from HPE is required to view the results.
- B. Your customer can only access a partial view of the results.
- C. The assessment period lasts for 5 business days.
- **D. Some assessment results are visible in only 2 hours.**

**정답: D**

**설명:**

Detailed Explanation:

Rationale for Correct Answer:

HPE CloudPhysics begins collecting performance and capacity data immediately after deployment of the Observer VM/collector.

Some initial assessment results (e.g., environment inventory, early utilization stats) can be visible within 2 hours, while deeper trending insights require longer data collection (days/weeks).

Distractors:

B: Tokens are not required for customers to view results; reports are available via the portal.

C: Customers get a full dashboard view of results, not partial.  
D: Assessments can run for longer periods (days-weeks), not fixed at 5 days.  
Key Concept: CloudPhysics delivers initial insights within hours.  
Reference: HPE CloudPhysics Technical Overview.

### 질문 # 38

A pool of Microsoft SQL servers started to use the Alletra 6000 family array six months ago. The data growth has been higher than expected, and the performance of the databases is facing some latency issues.  
Which method would allow both capacity and performance to grow when expanding the array, while keeping the management simple?

- A. By including more NIC cards to load balance host traffic.
- **B. By adding more arrays and capacity to a single scale-out group.**
- C. By initially selecting the timeless storage option for the array.
- D. By selecting more flash to cache ratio on the expansion shelves.

정답: B

설명:

Detailed Explanation:

Rationale for Correct Answer:

HPE Alletra 6000 is a scale-out architecture array. Adding more arrays to a single scale-out group increases both performance (IOPS, throughput) and capacity, while maintaining single-pane management via HPE Data Services Cloud Console. This is the most efficient way to address both capacity growth and latency reduction for SQL workloads.

Distractors:

B: Adding NICs may help with throughput but not backend latency or capacity scaling.

C: Flash-to-cache ratios can optimize read caching but don't fundamentally increase system-wide performance.

D: Timeless storage is a procurement/licensing option, not a performance/capacity scaling method.

Key Concept: Alletra 6000 scale-out clustering for balanced growth of capacity and performance.

Reference: HPE Alletra 6000 Technical Architecture Guide.
