Reliable 71301T Test Braindumps | 71301T Exam Demo

Just as an old saying goes, it is better to gain a skill than to be rich. Contemporarily, competence far outweighs family backgrounds and academic degrees. One of the significant factors to judge whether one is competent or not is his or her certificates. 71301T real test) Generally speaking, certificates function as the fundamental requirement when a company needs to increase manpower in its start-up stage. In this respect, our 71301T practice materials can satisfy your demands if you are now in preparation for a certificate.

Avaya Aura Communication Applications Implement Sample Questions (Q123-Q128):

NEW QUESTION # 123

To trace SIP messages exchanged during a Remote Worker registration in real-time, which Avaya Session Border Controller for Enterprise (ASBCE) CLI tool is used?

- A. tracem
- B. tracesbc

- C. traceReg
- D. traceRW

Answer: B

Explanation:

The tracesbc utility is the primary diagnostic and troubleshooting tool used on the Avaya Session Border Controller for Enterprise (ASBCE) command-line interface.

Real-Time Monitoring: When you run tracesbc from the CLI (after logging in as ipcs), it provides a real-time, scrolling view of all SIP signaling entering and leaving the SBC interfaces.

Remote Worker Tracking: Because Remote Worker registration involves a complex exchange of SIP REGISTER and SUBSCRIBE messages between the external client, the SBC, and the internal Session Manager, tracesbc is essential for verifying where a registration might be failing (e.g., a 401 Unauthorized loop or a timeout).

Ladder Diagrams: One of the most powerful features of tracesbc is its ability to generate a "ladder diagram" of a specific call or registration, showing exactly how the messages flow between the different IP interfaces (Internal vs. External).

NEW QUESTION # 124

The customer plans to have 50 SIP Trunks and 100 Remote Workers supported by the Avaya Session Border Controller for Enterprise (ASBCE).

How many ASBCE licenses will they require?

- A. 150 standard services licenses, and 150 advanced services licenses
- B. 50 standard services licenses, and 100 advanced services licenses
- C. 150 standard services licenses, and 100 advanced services licenses
- D. 150 standard services licenses

Answer: C

Explanation:

The Avaya Session Border Controller for Enterprise (ASBCE) licensing model is designed to account for the different types of workloads being processed by the SBC.

Standard Services Licenses: These are required for every session passing through the ASBCE, regardless of whether it is a SIP Trunk session or a Remote Worker session.

50 SIP Trunks + 100 Remote Workers = 150 total sessions, thus requiring 150 standard services licenses.

Advanced Services Licenses: These are required specifically for Remote Worker sessions to enable advanced features like WebRTC, media anchoring, and specific security features that aren't typically required for standard SIP trunking.

Since there are 100 Remote Workers, the customer requires 100 advanced services licenses.

NEW QUESTION # 125

In the Avaya Session Border Controller for Enterprise (ASBCE), which feature allows reusing the same TCP connection to the Avaya Aura Session Manager (SM) for all SIP messages related to the same Remote Worker?

- A. "Stream Users Over Transport Link" in the Signaling Interface used for the SM
- B. "Enable Grooming" in the Advanced tab of the SIP Server Profile for the SM
- C. "Enable Shared Control" in the Signaling Interface used for the SM
- D. "Share Transport Link" in the Advanced tab of the SIP Server Profile for the SM

Answer: B

Explanation:

In an Avaya Remote Worker environment, the ASBCE acts as the intermediary between the external endpoint (located on the public internet) and the internal Session Manager (SM).

The Problem: By default, SIP over TCP/TLS can sometimes create multiple connections, which consumes excessive resources (ports and memory) on the Session Manager when dealing with thousands of remote users.

The Solution (Grooming): When you Enable Grooming, the ASBCE "grooms" or multiplexes the signaling traffic. It ensures that SIP messages for a specific Remote Worker are sent over a single, persistent TCP/TLS connection to the Session Manager.

Benefits: This reduces the overhead on the Session Manager and ensures that the Session Manager can correctly "reach back" to the Remote Worker through the established firewall pinhole/SBC connection for incoming calls or NOTIFY messages.

NEW QUESTION # 126

Which Domain Policy Rule in the Avaya Session Border Controller for Enterprise (ASBCE) allows setting a limit to the maximum audio sessions per endpoint, enabling the ASBCE to reject the call when this limit is reached?

- A. Security Rule
- B. Media Rule
- C. Application Rule
- D. Border Rule

Answer: C

Explanation:

In the Avaya Session Border Controller for Enterprise (ASBCE), Application Rules are used to control the volume and characteristics of the application-layer traffic (SIP).

Session Limits: Within an Application Rule, you can define specific thresholds for Maximum Simultaneous Sessions. This can be applied per endpoint or per subscriber.

Call Admission Control (CAC): By setting a limit on audio sessions, the ASBCE performs a gatekeeping function. If a new call request exceeds the defined "Maximum Audio Sessions," the ASBCE will reject the INVITE, typically sending a SIP 503 (Service Unavailable) or 488 (Not Acceptable Here) response.

Granularity: Application Rules allow you to distinguish between different types of sessions, such as Audio, Video, and Multimedia, ensuring that one type of traffic does not saturate the available bandwidth or licensed capacity of the SBC.

NEW QUESTION # 127

To set Timers, URI Manipulation, and Header Manipulation that the Avaya Session Border Controller for Enterprise (SBCE) will use when signaling to the far-end server; a profile like "avaya-ru" is provided by default.

When configuring the Server Configuration, you must link to which type of Global profile?

- A. Topology Hiding
- B. Server Interworking
- C. Routing
- D. Signaling

Answer: B

Explanation:

The standard Avaya profile "avaya-ru" is cloned for the Call Server Interworking Profile.

The Interworking function of the Global Profiles feature enables the SBCE to function in an enterprise VoIP network using different SIP protocols.

NEW QUESTION # 128

.....

Our company have the higher class operation system than other companies, so we can assure you that you can start to prepare for the 71301T exam with our study materials in the shortest time. In addition, if you decide to buy the 71301T study materials from our company, we can make sure that your benefits will far exceed the costs of you. The rate of return will be very obvious for you. We sincerely reassure all people on the 71301T Study Materials from our company and enjoy the benefits that our study materials bring.

Reliable 71301T Test Braindumps: https://www.prep4pass.com/71301T_exam-braindumps.html

Under the instruction of our 71301T exam torrent, you can finish the preparing period in a very short time and even pass the exam successful, thus helping you save lot of time and energy and be more productive with our Avaya Aura Communication Applications Implement prep torrent, Get Instant Access to 71301T Exam and 1,200+ More, High question hit rate makes you no longer aimless when preparing for the exam, so you just should review according to the content of our 71301T study materials prepared for you.

Do you prefer to work with academically educated people or those who have been educated by the world, By Satish Nambisan, Mohanbir Sawhney, Under the instruction of our 71301T exam torrent, you can finish the preparing period in a very short time and even 71301T pass the exam successful, thus helping you save lot of time and energy and be more productive with our Avaya Aura

Communication Applications Implement prep torrent.
