Free PDF Quiz Acquia - Unparalleled Drupal-Site-Builder - Reliable Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 Exam Papers

Our study material is not same as other dumps or study tools, it not only has good quality but also has cheap price. We have most professional team to compiled and revise Drupal-Site-Builder exam question, in order to try our best to help you pass the exam and get a better condition of your life and your work. Moreover, only need to spend 20-30 is it enough for you to grasp whole content of Drupal-Site-Builder practice materials that you can pass the exam easily, this is simply unimaginable.

Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 Sample Questions (Q17-Q22):

NEW QUESTION # 17

You wish to display the "Recent content" block in the sidebar region on all the article pages only. The block should be hidden on all other pages.

How do you accomplish this?

- A. In the Block layout settings, add the Recent content block to the Sidebar section and set the block to be visible for the "Article" Content type.
- B. Add the Recent content block to all pages, and hide it from non-Article pages using CSS.
- C. Edit Article Content type and check the "show recent content" option.

- D. Check the "show recent content" option in the site branding block, and set it to be visible only for Article Content type.

Answer: A

Explanation:

Drupal 10 and Drupal 11 provide block visibility conditions that allow administrators to control where blocks appear. According to Drupal's block system documentation, when placing a block through Structure # Block layout , you can configure visibility based on content types, pages, roles, or request paths .

To meet the requirement of showing the "Recent content" block only on Article pages, the correct approach is to place the block in the Sidebar region and configure its visibility condition to Content types # Article . This ensures the block is displayed only when viewing nodes of the Article content type and hidden elsewhere.

Option A is incorrect because using CSS to hide blocks is not a proper Drupal configuration and still renders the block unnecessarily. Options B and C are invalid because Drupal does not provide such settings in content type or site branding configurations.

Thus, using block visibility settings tied to the Article content type is the correct and recommended method in Drupal site building.

NEW QUESTION # 18

Your client copies HTML from an external source and pastes into the default WYSIWYG Editor on your site (CKEditor). The client has come to you complaining of broken HTML being displayed on the site. The CKEditor is configured to use Full HTML text format allowing all HTML elements and should continue to allow all elements.

How would you fix the issue of broken HTML?

- **A. Enable "Correct faulty and chopped off HTML" filter on Full HTML text format**
- B. Use JavaScript HTML corrector plugin in your CKEditor
- C. Enable "Limit allowed HTML tags and correct faulty HTML" option on Full HTML
- D. Suggest using an online HTML validator before pasting into CKEditor

Answer: A

Explanation:

Drupal uses text formats and filters to control how HTML input is processed before being displayed. One of the available filters is "Correct faulty and chopped off HTML" , which is specifically designed to fix improperly formatted or broken HTML markup.

According to Drupal documentation, this filter ensures that HTML pasted into editors (like CKEditor) is automatically cleaned and corrected , such as closing unclosed tags, fixing malformed markup, and preventing rendering issues. This is particularly useful when users paste HTML from external sources, which often includes inconsistent or invalid markup.

Option D is correct because it directly addresses the issue at the text format level without restricting allowed tags, maintaining the requirement to allow all HTML elements.

Option C is incorrect because enabling "Limit allowed HTML tags" would restrict HTML usage, which contradicts the requirement to allow all elements. Options A and B are not standard Drupal solutions and do not align with Drupal's built-in filtering system.

Therefore, enabling the Correct faulty and chopped off HTML filter is the correct and recommended approach in Drupal 10 and Drupal 11.

NEW QUESTION # 19

You have installed a contributed module called "Sample Module" that looks like it will be a great fit for the business case you are trying to solve. However, upon closer examination, it looks like the module only supplies a drush command; it does not have an admin interface.

As a site builder with no command-line experience, this will not work for you! You need a web user interface to use this module. How should you request a web UI in the module's issue queue?

- A. Create a "Feature Request" issue for the module with the subject line, "URGENT: Module Broken!!!Needs UI."
- B. Create a "Bug Report" issue for the module with the subject line, "Create web UI for Sample Module."
- C. Create a "Plan" issue for the module with the subject line, "Create web UI for Sample Module."
- **D. Create a "Feature Request" issue for the module with the subject line, "Create web UI for Sample Module."**

Answer: D

Explanation:

Drupal's issue queue guidelines clearly distinguish between different issue types. A Bug Report is used when existing functionality is broken or not working as intended. In this case, the module is functioning correctly- it simply does not provide a UI-so option A is

incorrect.

A Feature Request is the correct issue type when asking for new functionality or enhancements to an existing module. Requesting a web-based UI for a module that currently only provides Drush commands is a classic example of a feature enhancement, making option C correct.

Option B ("Plan") is typically used for outlining larger initiatives or coordinated development efforts, not for requesting a specific feature. Option D is incorrect because Drupal issue queue best practices emphasize clear, descriptive, and professional issue titles, avoiding urgency or misleading wording like "Module Broken!!!" when it is not actually broken.

Drupal.org documentation encourages contributors to categorize issues properly and write clear, concise summaries so maintainers and the community can effectively review and respond. Therefore, submitting a Feature Request with a clear subject line is the correct and recommended approach.

NEW QUESTION # 20

Recent log entries of your site show that there are too many failed login attempts for the site super admin user (user 1). How can you better secure the Drupal super admin user (user 1) from outside attacks?

- A. Cancel the user account for user 1.
- B. Remove the "Administrator" role from user 1, which makes them an anonymous user.
- C. Only allow members of the Drupal community in good standing to be user 1.
- **D. Do not give this user an obvious name like "admin" or "administrator" which are too easy to guess.**

Answer: D

Explanation:

Drupal's official security guidance for the super user account (user 1) specifically recommends that administrators do not name the first account "admin" or something obvious . The reason is straightforward: obvious usernames make brute-force and credential-guessing attacks easier, because attackers already know half of the login credentials they need to target. Drupal's administration and security documentation also recommends limiting direct use of user 1 and protecting it carefully because it is a uniquely powerful account.

That makes option D the correct answer. The other options do not match Drupal's documented best practices.

There is no Drupal security rule about "members of the Drupal community in good standing" being allowed to use user 1. Canceling the user 1 account is not the recommended solution for this situation, and removing the Administrator role from user 1 would not make the account anonymous; in Drupal, user 1 is a special account with superuser behavior that is handled separately from ordinary role assignment. Drupal's own guidance emphasizes safer naming and tighter handling of the account, not these alternative actions.

NEW QUESTION # 21

A "Hotel Review" content type includes an entity reference field, "field_related_hotel," to associate each Hotel Review with a "Hotel" node. You are asked to add a sidebar block to the Hotel node display that shows a list of related reviews.

How can you build this functionality?

- **A. Create a View of Hotel Review nodes, with a relationship to content referenced from field_related_hotel, and a contextual filter by ID using the relationship, set to use "Content ID from URL". Add the block to the Hotel nodes display.**
- B. Add "field_related_hotel" to the Hotel content type and use CSS to display the field in the sidebar region.
- C. Add the "show related content" block to the Hotel nodes display. Set it to include only nodes of type "Hotel Review"
- D. Create a view of Hotel nodes, with a relationship to field_related_hotel, and add the title field using the relationship. Add the block to the Hotel nodes display.

Answer: A

Explanation:

The correct Drupal site-building approach is to create a View of Hotel Review content and filter it dynamically based on the currently viewed Hotel node . Drupal's Views documentation explains that contextual filters are used when a view should change depending on the current context, such as the URL or current page. It also notes that when the filter is based on related data rather than the base table alone, you may need to add a relationship first.

Here, the base content is Hotel Review nodes, and those reviews point to a Hotel through the entity reference field field_related_hotel . So the View should add the relationship to the referenced Hotel node, then use a Content: ID contextual filter on that relationship, with the default value set to Content ID from URL . This makes the block show only reviews whose referenced hotel matches the Hotel node currently being displayed.

That is exactly what option A describes. The other options either use the wrong base content, rely on CSS instead of Views logic, or

refer to a generic block that does not provide this relationship-based filtering behavior.

NEW QUESTION # 22

.....

The Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 prep torrent that we provide is compiled elaborately and highly efficient. You only need 20-30 hours to practice our Drupal-Site-Builder exam torrent and then you can attend the exam. Among the people who prepare for the exam, many are office workers or the students. For the office worker, they are both busy in the job or their family; for the students, they possibly have to learn or do other things. But if they use our Drupal-Site-Builder Test Prep, they won't need so much time to prepare the exam and master exam content in a short time. What they need to do is just to spare 1-2 hours to learn and practice every day and then pass the exam with Drupal-Site-Builder test prep easily. It costs them little time and energy.
