## **C\_SIGDA\_2403 Prepaway Dumps - Practical C\_SIGDA\_2403 Information**

Each of us is dreaming of being the best, but only a few people take that crucial step. The key step is to work hard to make yourself better. Our C\_SIGDA\_2403 study materials may become your right man. Perhaps you have heard of our C\_SIGDA\_2403 Exam Braindumps. A lot of our loyal customers are very familiar with their characteristics. And our C\_SIGDA\_2403 learning quiz have become a very famous brand in the market and praised for the best quality.

## **SAP Certified Associate - Process Data Analyst - SAP Signavio Sample Questions (Q15-Q20):**

### **NEW QUESTION # 15**

How can you capture relevant process tasks in a table-based approach?

- A. Use Graphical Editor

- B. Use QuickModel
- C. Use Process Documentation Template
- D. Use Process Reporting

**Answer: B**

#### NEW QUESTION # 16

How can a process owner approve workflows?

- A. Investigations tab under Menu
- B. Shared Documents tab in Menu
- C. Recent tab
- D. Tasks tab under Menu

**Answer: D**

#### NEW QUESTION # 17

What is a Variant in Process Mining?

- A. A variant visualizes all tasks to complete the process.
- B. A variant is a set of cases with the same sequence of tasks.
- C. A variant has different process flows.
- D. A variant is a set of attributes.

**Answer: B**

Explanation:

In Process Mining, a Variant is defined as:

\* Option A (A variant is a set of cases with the same sequence of tasks.): This definition accurately captures the essence of what a variant represents in the context of process mining. Variants help in understanding how processes are executed by grouping cases that follow the same sequence of activities or tasks, thus allowing for the analysis of common process flows and identifying deviations or inefficiencies.

#### NEW QUESTION # 18

How does the Event-based Gateway work?

- A. The token waits for the first occurring event.
- B. The token waits for all connected events.
- C. The token waits for all events happening at the same time.
- D. A token is created for each connected event.

**Answer: A**

Explanation:

The Event-based Gateway in BPMN works by waiting for the first occurring event among the connected events. Once one of the connected events happens, the process flow continues based on the path of that event, and other paths are disregarded. This mechanism is used in process modeling to specify that a decision in the process flow will be made based on the occurrence of events, rather than the evaluation of expressions. The Event-based Gateway is particularly useful in scenarios where the flow of a process depends on external events, and the process needs to be flexible enough to handle whichever event occurs first.

References: BPMN 2.0 specification.

#### NEW QUESTION # 19

How can KPI's from SAP Signavio Process Intelligence be visualized in the SAP Signavio Process Collaboration Hub? Note: There

are 3 correct answers to this question.

### Answer:

Explanation:  
B.C.E

## NEW QUESTION # 20

Some sites provide SAP C\_SIGDA\_2403 Exam study materials on the Internet, but they do not have any reliable guarantee. Let me be clear here a core value problem of Dumpcollection. All SAP exams are very important. In this era of rapid development of information technology, Dumpcollection just questions provided by one of them. Why do most people choose Dumpcollection? This is because the exam information provided by Dumpcollection will certainly be able to help you pass the exam. Why? Because it provides the most up-to-date information, which is the majority of candidates proved by practice.
