Just like the saying goes, it is good to learn at another man's cost. In the process of learning, it is more important for all people to have a good command of the method from other people. The GH-100 study materials from our company will help you find the good study method from other people. Using the GH-100 Study Materials from our company, you can not only pass your exam, but also you will have the chance to learn about the different and suitable study skills. We believe these skills will be very useful for you near life.

Microsoft GH-100 Exam Syllabus Topics:

Topic	Details
Topic 1	• Enable secure software development and ensure compliance: This section of the exam measures skills of GitHub Enterprise Administrators and deals with applying GitHub's security and compliance capabilities. It covers policies, auditing, scrubbing sensitive data, secret scanning, code scanning with CodeQL, dependency management with Dependabot, and implementing security response plans. It also explores authentication tokens, app security policies, and enterprise managed users.
Topic 2	• Describe how GitHub is deployed, distributed, and licensed: This section of the exam measures skills of GitHub Enterprise Administrators and highlights the deployment models of GitHub Enterprise Server, Enterprise Cloud, and GitHub AE. It covers licensing structures, billing for seat licenses and metered services, support options, and monitoring license usage across users and machine accounts.
Topic 3	• Support GitHub Enterprise for users and key stakeholders: This section of the exam measures skills of GitHub Enterprise Administrators and covers supporting users, identifying issues that can be resolved internally versus those needing GitHub Support, and generating support bundles and diagnostics. It also involves recognizing underutilized features, managing workflows like branching and pull requests, understanding CI • CD strategies, recommending tooling, and extending capabilities through APIs or Marketplace apps.

Topic 4	• Manage user identities and GitHub authentication: This section of the exam measures skills of DevOps Engineers and focuses on managing authentication and identity across organizations using SAML SSO, SCIM, and team synchronization. Candidates need to understand identity providers, user membership implications, authorization models, and enforcing security measures such as two-factor authentication.

Preparation Material with Free Demos and Updates [2026]

We all know that in the fiercely competitive IT industry, having some IT authentication certificates is very necessary. IT authentication certificate is a best proof for your IT professional knowledge and experience. Microsoft GH-100 is a very important certification exam in the IT industry and passing Microsoft certification GH-100 exam is very difficult. But in order to let the job position to improve spending some money to choose a good training institution to help you pass the exam is worthful. Pass4sureCert's latest training material about Microsoft Certification GH-100 Exam have 95% similarity with the real test. If you use Pass4sureCert'straining program, you can 100% pass the exam. If you fail the exam, we will give a full refund to you.

Microsoft GitHub Administration Sample Questions (Q11-Q16):

NEW QUESTION # 11
What is a key characteristic of GitHub Enterprise Server (GHES) compared to GitHub Enterprise Cloud (GHEC)?

- A. GHES allows enterprises to have complete control over their hosting environment, including data storage and network security policies.
- B. GHES users cannot integrate with external identity providers for authentication.
- C. GHEC offers data residency options in regions that GHES does not support.
- D. GHES is hosted by GitHub and offers automatic scaling, while GHEC requires self-hosting.

Answer: A

Explanation:
GitHub Enterprise Server is a self-hosted product you install and manage on your own infrastructure - giving you full control over data storage, network security policies, and the underlying environment.

NEW QUESTION # 12
What is the effect of enforcing a policy that restricts GitHub Actions to only those created by the enterprise?

- A. All public actions are allowed
- B. Only actions created within the enterprise are allowed
- C. Marketplace actions are allowed only with SSO enabled
- D. Actions can only be triggered by organization members

Answer: B

Explanation:
When you enforce the "Allow enterprise actions and reusable workflows" policy, GitHub will block all workflows from using actions or reusable workflows that aren't defined in a repository within your enterprise - so only actions created inside your enterprise are allowed.

NEW QUESTION # 13
Which of the following is a benefit of creating a new GitHub organization?

- A. Clear separation of reggs, projects, teams, billing, and organization-specific policies.
- B. Simplified collaboration across all organizations.
- C. Reduced administrative overhead.
- D. Automatic inheritance of policies from other organizations.

Answer: A

Explanation:
Creating a new organization gives you a dedicated container for your shared work, letting you isolate repositories, projects, teams, billing settings, and policy configurations on an organization-by-organization basis.

NEW QUESTION # 14
How does Dependabot determine which security update PRs to open?

- A. It waits for manual triage of all CVEs.
- B. It reads the GitHub Issues and automatically suggests fixes.
- C. It uses the dependency graph and Dependabot alerts to open PRs for patched versions.
- D. It compares your codebase to the GitHub Trending list.

Answer: C

Explanation:
Dependabot relies on your repository's enabled Dependency Graph and Dependabot Alerts to identify vulnerable dependencies; it then automatically opens pull requests to update to the patched versions that resolve those alerts.

NEW QUESTION # 15
You want to ensure a secret is automatically available to only workflows in internal and private repositories in the organization. Where do you configure the required access policy?

- A. Runner groups
- B. Actions policies
- C. Rulesets
- D. Organization secret

Answer: D

Explanation:
You set the access policy on the Organization Secret itself - configuring its visibility so it's scoped automatically to only internal and private repositories.

NEW QUESTION # 16
