## VMware 2V0-17.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Deploy, Configure, and Operate VMware Cloud Foundation (VCF): This section of the exam measures the skills of VCF Administrators and goes in-depth into deploying, configuring, and managing VMware Cloud Foundation. The deployment portion covers identifying deployment models, configuring private cloud environments, and setting up workload domains and networking. The management objectives focus on lifecycle operations such as fleet management, identity and role-based access, licensing, certificate handling, and importing existing vCenters. Operations are assessed through capabilities like monitoring health, logs, networks, and storage, along with creating dashboards, configuring alerts, and ensuring compliance. The automation portion evaluates skills in using VCF Automation for multi-tenancy, provider networking, content libraries, governance policies, and extensibility to automate business processes. It also includes knowledge of deploying Supervisor-based services within Cloud Foundation.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Plan and Design the VMware by Broadcom Solution: This section of the exam measures the skills of Solution Designers and emphasizes the ability to plan and design VMware by Broadcom solutions. Although no testable objectives are defined here, it reinforces the importance of architectural planning and design considerations for large-scale cloud deployments.</li> </ul>

Topic 3	<ul style="list-style-type: none"> <li>IT Architectures, Technologies, Standards: This section of the exam measures the skills of Cloud Architects and focuses on understanding the broader context of IT architectures, common technologies, and industry standards. While it does not have testable objectives, it sets the foundation for how VMware Cloud Foundation aligns with enterprise cloud strategies.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>VMware Cloud Foundation Fundamentals: This section of the exam measures the skills of Private Cloud Engineers and covers the basic building blocks of VMware Cloud Foundation. It includes the vision and use cases for private cloud, along with the value it provides to businesses. Candidates are expected to understand compute fundamentals such as deploying and managing vCenter, ESXi, clusters, and virtual machines. Storage fundamentals include configuring vSphere storage, setting up vSAN clusters, applying storage policies, and understanding resilience options. Networking fundamentals are also assessed, with a focus on configuring connectivity, fabrics, routing, and network services in a VMware environment.</li> </ul>

### VMware Cloud Foundation 9.0 Administrator Sample Questions (Q80-Q85):

#### NEW QUESTION # 80

Which technology is primarily used to separate traffic and provide Layer 2 isolation in a vSphere virtual network environment?

- A. NIC teaming
- B. Jumbo frames
- C. VMware Tools
- **D. VLAN tagging**

**Answer: D**

Explanation:

VLAN tagging is used to isolate traffic at Layer 2 within virtual switches, ensuring network segmentation and security.

#### NEW QUESTION # 81

Which strategies or features might help secure a vSphere environment against unauthorized configuration changes and attacks?

- **A. Restricting direct host access via DCUI and SSH**
- **B. Configuring Lockdown Mode on ESXi hosts**
- C. Enabling DRS for automated cluster balancing
- D. Using vSphere Configuration Encryption

**Answer: A,B**

Explanation:

Lockdown Mode limits direct host access (A), and restricting the DCUI/SSH (D) reduces the attack surface. DRS (B) is for resource balancing, and there is no feature called "vSphere Configuration Encryption" (C). You can encrypt VMs or vSAN, but not the entire configuration in that manner.

#### NEW QUESTION # 82

An administrator must deploy a new VCF instance in a dark site (no Internet). How should binaries be downloaded before starting

installation?

- A. Use Broadcom Downloads.
- B. Use the VCF Installer.
- C. Use SDDC Manager.
- **D. Use the VCF Download Tool.**

**Answer: D**

Explanation:

For environments without Internet access, use the VCF Download Tool on a connected machine to download required bundles and transfer them to the air-gapped VCF environment.

### NEW QUESTION # 83

An administrator has been asked to create a dashboard in VMware Cloud Foundation (VCF) Operations and share it with a specific group of users.

The following requirements have been provided:

- The users must be authenticated in VMware Cloud Foundation (VCF) Operations.

- The individual users should receive access to this dashboard for 3 months after which it must be revoked automatically.

Which three steps should the administrator take to complete the stated requirements? (Choose three.)

- **A. Grant access for 3 months.**
- **B. Grant users access to the dashboard.**
- C. Create an embedded code to the dashboard.
- D. Publish the embedded code on the company intranet.
- E. Schedule and send a report using the dashboard as a view.
- **F. Use Identity Broker to authenticate users.**

**Answer: A,B,F**

Explanation:

The VCF 9.0 Operations Access Control Guide describes how dashboard sharing and user access is managed:

Identity Broker Authentication (D):

All external users must authenticate via the VCF Identity Broker, which integrates with Active Directory, LDAP, or other identity providers. Documentation states: "Identity Broker provides single sign-on and federation, ensuring users are authenticated consistently across VCF Operations and Automation services." Grant Access to Dashboard (E):

After authentication, the administrator must explicitly grant access to the dashboard for the specified group. This ensures that only the intended users can view or interact with the dashboard.

Set Time-Bound Access (C):

VCF Operations supports time-bound access policies. The documentation specifies: "Access can be granted with an expiration period, ensuring access is automatically revoked after the configured interval (for example, 90 days)." This aligns with the 3-month requirement.

### NEW QUESTION # 84

An administrator is tasked with deploying a new VMware Cloud Foundation (VCF) instance.

The management domain is designed to be created with three virtual distributed switches (VDS) configured as follows:

- VDS1 - used for management and vMotion traffic
- VDS2 - used for vSAN traffic
- VDS3 - used for NSX Overlay traffic

What action would the administrator take to deploy the designed configuration?

- A. The ESXi hosts have to be configured with twelve physical NICs to ensure redundancy.
- **B. A JSON file must be prepared with the defined configuration and used to run the bring-up process.**
- C. The design must be changed to ensure vSAN and NSX overlay traffic are on the same VDS.
- D. vSphere Distributed Switch Profile 2 must be selected in the VCF Deployment parameter workbook.

**Answer: B**
