NEW QUESTION # 80

Which management option is best suited for standalone Cisco Secure Firewall deployments?

- A. Cisco Security Manager
- B. Cisco Defense Orchestrator
- C. Cisco Secure Firewall Management Center
- **D. Cisco Secure Firewall Device Manager**

Answer: D

Explanation:

For standalone Cisco Secure Firewall deployments, the Cisco Secure Firewall Device Manager (FDM) is the most appropriate management option. FDM is a browser-based, on-box management tool that allows administrators to configure and manage a single firewall device without the need for external management infrastructure. It provides an intuitive interface for basic configurations, policy management, and monitoring.

In contrast:

Cisco Secure Firewall Management Center (FMC) is designed for centralized management of multiple firewall devices.

Cisco Defense Orchestrator (CDO) is a cloud-based solution for managing security policies across various devices.

Cisco Security Manager is an older platform primarily used for managing ASA devices.

NEW QUESTION # 81

Which cable type should be used when installing replacement hardware and connecting two devices of the same type, like two DTEs or two DCEs?

- **A. RJ-45 Ethernet crossover patch cable**
- B. Rolled RJ-45 to RJ-45 console cable
- C. RJ-45 Ethernet straight-through patch cable
- D. USB Type A to Type B cable

Answer: A

Explanation:

When connecting two devices of the same type (e.g., two routers, two switches, or two DTEs), a crossover cable is required. This cable swaps the transmit and receive pairs to allow direct communication between devices without the need for an intermediate device like a switch.

Straight-through cables are used to connect different types of devices (e.g., PC to switch).

Rolled cables are used for console access.

USB Type A to B cables are typically used for peripheral device connections, not networking.
