NCP-MCA exam consists of 60 multiple-choice questions and must be completed within 90 minutes. The cost of the exam varies depending on your location, but it typically ranges from \$199 to \$399.

## Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Sample Questions (Q70-Q75):

### NEW QUESTION # 70

When creating a blueprint, which Pre-create and Post-delete tasks are valid?

- A. Execute, Set variable, API, Delay
- B. Create, Start, Stop, Soft Delete
- C. Create, Start, Stop, Delete
- D. Execute, Set variable, HTTP, Delay

**Answer: D**

Explanation:

Pre-create and Post-delete tasks are actions that can be performed before creating or after deleting a blueprint deployment. They can be used to integrate with external systems, set variables, or add delays. The valid tasks are Execute, Set variable, HTTP, and Delay. Create, Start, Stop, and Delete are not valid tasks, as they are part of the deployment lifecycle, not the pre-create or post-delete actions. References: Nutanix Certified Professional - Multicloud Automation (NCP-MCA) Exam Blueprint Guide, page 10; Nutanix Multicloud Automation Administration (NMCAA) Course, Module 5: Blueprints.

### NEW QUESTION # 71

In which two locations can an administrator look to view a list of executed playbooks? (Choose two.)

- A. Lists
- B. Dashboard
- C. Executions
- D. Plays

**Answer: C,D**

Explanation:

An administrator can look to view a list of executed playbooks in two locations: Executions and Plays. The Executions page shows the status and details of all the playbooks that have been executed across all the projects. The Plays page shows the status and details of all the playbooks that have been executed within a specific project. The Lists page shows the predefined and custom lists that can be used as inputs for playbooks.

The Dashboard page shows the overview and statistics of the X-Play service. References:

\* Nutanix Certified Professional - Multicloud Automation (NCP-MCA) v6.5, Section 3 - Validate Blueprints, Runbooks, Playbooks, and Automation Settings, page 4

\* Nutanix Multicloud Automation Administration (NMCAA), Module 5 - X-Play, Lesson 5.3 - Playbook Management, page 2

\* Nutanix Calm User Guide, X-Play, Executions

### NEW QUESTION # 72

Within a Calm blueprint, which two actions can an administrator apply to a Service under the Guest Customization section? (Choose two.)

- A. Choose UEFI or Legacy BIOS
- B. Apply a Cloudinit Script
- C. Apply a Sysprep file
- D. Modify the base OS image

**Answer: B,C**

Explanation:

Within a Calm blueprint, an administrator can apply two actions to a Service under the Guest Customization section: Apply a Cloudinit Script and Apply a Sysprep file. These actions allow the administrator to customize the configuration and behavior of the

virtual machines that are provisioned from the blueprint. A Cloudinit Script is a set of commands or scripts that run on Linux-based virtual machines during the boot process. A Sysprep file is a configuration file that specifies the Windows settings and options for the virtual machines.

These actions can be used to perform tasks such as setting the hostname, network configuration, user accounts, software installation, and more. References:

\* Nutanix Certified Professional - Multicloud Automation (NCP-MCA) v6.5, Section 2 - Deploy and Configure Nutanix Calm and Related Components, page 3

\* Nutanix Multicloud Automation Administration (NMCAA), Module 2 - Nutanix Calm, Lesson 2.2 - Blueprint Management, page 9

\* Nutanix Calm User Guide, Blueprint, Guest Customization

### NEW QUESTION # 73

What must be associated with a Project to enable cloud resource provisioning?

- A. Task Library item
- **B. Provider Account**
- C. Project Environment
- D. Approval Policy

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation

Self-Service supports provisioning into:

\* AWS

\* Azure

\* GCP

\* VMware

\* Nutanix AHV

To deploy into external clouds, Calm requires:

\* A Provider Account (credentials + API endpoints + permissions)

\* Assigned to the Project

Without a Provider Account, the Project cannot access cloud infrastructure and provisioning fails.

Documentation is explicit:

A Project must have at least one Provider Account to enable cloud provisioning.

Thus the correct answer is D.

### NEW QUESTION # 74

An administrator manages a Nutanix cluster with 630 VMs, all of which are in production.

The Accounting department wants to be notified when any of their production VMs exceed 90% CPU usage or 90% memory usage. Their VMs are categorized as LOB:Accounting.

How should the administrator satisfy this request from the Accounting department?

- A. Direct the VM users to generate alerts within the affected VMs.
- B. Create a category named Department with the value Accounting.
- **C. Create an Alert with the Accounting category assigned.**
- D. Create a dashboard in Prism Central with the CPU Usage.

**Answer: C**
