Latest Google Chrome-Enterprise-Administrator Exam Cram - Chrome-Enterprise-Administrator Latest Test Dumps

Our Chrome-Enterprise-Administrator study guide boosts high quality and we provide the wonderful service to the client. We boost the top-ranking expert team which compiles our Chrome-Enterprise-Administrator guide prep elaborately and check whether there is the update every day and if there is the update the system will send the update automatically to the client. The content of our Chrome-Enterprise-Administrator Preparation questions is easy to be mastered and seizes the focus to use the least amount of answers and questions to convey the most important information. And our quality of Chrome-Enterprise-Administrator exam questions is the best in this field for you to pass the Chrome-Enterprise-Administrator exam.

Google Chrome-Enterprise-Administrator Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Manage Chrome Enterprise in the Cloud: This section of the exam measures skills of a Cloud Systems Administrator and focuses on preparing and configuring environments for Chrome cloud management. Candidates must demonstrate how to verify domains, use admin roles, configure organizational structures, deploy enrollment tokens, enable reporting, and maintain Chrome using the Google Admin console.

Topic 2	<ul style="list-style-type: none"> • Analyze Chrome Data: This section of the exam measures skills of a Chrome Data Analyst and focuses on using the Google Admin console to view, analyze, and troubleshoot browser data. It includes reviewing reports, diagnosing browser or update issues, investigating performance problems, and identifying security risks based on log events and Chrome activity.
Topic 3	<ul style="list-style-type: none"> • Chrome Enterprise Management Fundamentals: This section of the exam measures skills of a Chrome Device Administrator and covers the foundational elements of managing Chrome in an enterprise. It includes understanding how policies are applied and resolved, differentiating managed browsers from profiles, and describing how policies work. It also covers Chrome's built-in security features, how extensions are used and deployed, and how the release cycle and channels are managed.
Topic 4	<ul style="list-style-type: none"> • Chrome Extensions: This section of the exam measures skills of an Endpoint Security Manager and involves managing Chrome extension policies. It includes designing extension management strategies, handling extension exemptions, creating approval workflows, and assessing extensions for their risk and compliance with business continuity requirements.
Topic 5	<ul style="list-style-type: none"> • Chrome Updates: This section of the exam measures skills of a Chrome IT Policy Analyst and addresses the various update methods available for Chrome. It includes selecting the right update strategy for different business and security needs, managing compliance across platforms, and adapting update methods based on environmental changes or risks.

Google Professional Chrome Enterprise Administrator Certification Exam Sample Questions (Q10-Q15):

NEW QUESTION # 10

An administrator identifies that the next major Chrome release, Chrome 130, has an issue with one of their critical business applications. The company's Chrome browsers are currently on version 129.0.6568.91. The administrator needs to prevent browsers from updating to Chrome 130, while allowing continued updates within the Chrome 129 major version.

Which target version prefix should the administrator use in the updates setting to achieve this?

- A. 129.
- B. 129(
- C. 129"
- D. 0

Answer: A

Explanation:

To target all updates within the 129 major version, the administrator should use the target version prefix `129.

` . This tells Chrome to stay within the 129 branch and accept minor updates (like 129.0.x.y to 129.1.x.y) but not to upgrade to the next major version (130). The other options are not the correct syntax for specifying a major version prefix for target updates.

NEW QUESTION # 11

In Chrome's Safe Browsing settings, which option provides the most robust protection against online threats and is suitable for a highly secure environment?

- A. Advanced Threat Protection
- B. Enhanced Protection
- C. Secure Browsing Mode
- D. Proactive Defense

Answer: B

Explanation:

Among the Safe Browsing options, **Enhanced Protection** offers the most robust security. It proactively checks URLs, downloads, and extensions against Google's Safe Browsing database in real time, and it can also share more data with Google to improve detection and provide personalized warnings. This level of protection is best suited for environments with high security

requirements. The other options might represent different levels of Safe Browsing with varying degrees of protection.

NEW QUESTION # 12

Chrome Browser Cloud Management has been successfully implemented at a company for the past year.

Recently, the engineering team has received feedback from the security team that Chrome browsers are not meeting patching Service Level Agreements (SLAs). In the Insight report, the engineering team sees that 30% of their companies' browsers are pending updates.

Which browser policy could the engineering team implement to ensure better compliance with the security team's patching requirement?

- A. Auto-update check period
- B. Google updater policy precedence
- C. Chrome browser updates
- D. Relaunch notification

Answer: A

Explanation:

To ensure timely patching, the engineering team should adjust the "Auto-update check period" policy. By shortening this period, Chrome browsers will check for updates more frequently, increasing the likelihood of applying security patches sooner and improving compliance with patching SLAs. "Chrome browser updates" is a general category, "Relaunch notification" affects when users are prompted to restart, and "Google updater policy precedence" deals with the order of policy application, not the frequency of checks.

NEW QUESTION # 13

Where can information about all of the profiles associated with a browser be found?

- A. Chrome log events
- B. Chrome Insights report
- C. Managed browsers detail
- D. Managed devices

Answer: C

Explanation:

The "Managed browsers detail" page in the Google Admin console provides specific information about individual managed Chrome browser instances. This includes details about the profiles associated with that browser, such as the signed-in users and their management status. Chrome log events might contain some profile-related information but are more focused on actions. The "Managed devices" section primarily focuses on ChromeOS devices. The "Chrome Insights report" provides a high-level overview rather than detailed profile information for a specific browser instance.

NEW QUESTION # 14

An organization has Chrome set to auto-update. The security team runs a compliance report from Chrome Enterprise Core and notices that some rarely used machines are showing an old version of Chrome. However, when an engineer logs in to these PCs and checks Chrome directly, the correct updated version appears. What is the most likely reason for this discrepancy?

- A. Network setting is blocking the unattended auto-update check
- B. The auto-update feature is malfunctioning and not updating Chrome until it is launched
- C. The display version does not update until Chrome is launched
- D. The machine has a different version of Chrome installed that is not managed via auto update

Answer: C

Explanation:

The most likely reason for this discrepancy is that the version reported in the Chrome Enterprise Core compliance report might not be updated in real-time until Chrome is actively running and checks in. When an engineer logs in and launches Chrome, it likely completes the update process and reports the correct version.

The auto-update feature generally works in the background, and a completely different unmanaged version (option C) or a persistent
