目前，全球500強中的90%企業都在使用 Palo Alto Networks 公司的產品。PCCP 認證是全球專業認證各領域中的權威認證。在IT世界裡，擁有 Palo Alto Networks PCCP 認證已成為最合適的加更簡單的方法來達到成功。這意味著，考生應努力通過考試才能獲得認證。而 NewDumps 考題大師致力與為客戶提供 PCCP 認證的全真考題及認證學習資料，能夠幫助妳一次通過 PCCP 認證考試。

Palo Alto Networks PCCP 考試大綱：

主題	簡介
主題 1	<ul style="list-style-type: none"> Endpoint Security: This domain is aimed at an Endpoint Security Analyst and covers identifying indicators of compromise (IOCs) and understanding the limits of signature-based anti-malware. It includes concepts like User and Entity Behavior Analytics (UEBA), endpoint detection and response (EDR), and extended detection and response (XDR). It also describes behavioral threat prevention and endpoint security technologies such as host-based firewalls, intrusion prevention systems, device control, application control, disk encryption, patch management, and features of Cortex XDR.
主題 2	<ul style="list-style-type: none"> Network Security: This domain targets a Network Security Specialist and includes knowledge of Zero Trust Network Access (ZTNA) characteristics, functions of stateless and next-generation firewalls (NGFWs), and the purpose of microsegmentation. It also covers common network security technologies such as intrusion prevention systems (IPS), URL filtering, DNS security, VPNs, and SSL TLS decryption. Candidates must understand the limitations of signature-based protection, deployment options for NGFWs, cybersecurity concerns in operational technology (OT) and IoT, cloud-delivered security services, and AI-powered security functions like Precision AI.
主題 3	<ul style="list-style-type: none"> Secure Access: This part of the exam measures skills of a Secure Access Engineer and focuses on defining and differentiating Secure Access Service Edge (SASE) and Secure Service Edge (SSE). It covers challenges related to confidentiality, integrity, and availability of data and applications across data, private apps, SaaS, and AI tools. It examines security technologies including secure web gateways, enterprise browsers, remote browser isolation, data loss prevention (DLP), and cloud access security brokers (CASB). The section also describes Software-Defined Wide Area Network (SD-WAN) and Prisma SASE solutions such as Prisma Access, SD-WAN, AI Access, and enterprise DLP.

主題 4	<ul style="list-style-type: none"> • Security Operations: This final section measures skills of a Security Operations Analyst and covers key characteristics and practices of threat hunting and incident response processes. It explains functions and benefits of security information and event management (SIEM) platforms, security orchestration, automation, and response (SOAR) tools, and attack surface management (ASM) platforms. It also highlights the functionalities of Cortex solutions, including XSOAR, Xpanse, and XSIAM, and describes services offered by Palo Alto Networks' Unit 42.
主題 5	<ul style="list-style-type: none"> • Cloud Security: This section targets a Cloud Security Specialist and addresses major cloud architectures and topologies. It discusses security challenges like application security, cloud posture, and runtime security. Candidates will learn about technologies securing cloud environments such as Cloud Security Posture Management (CSPM) and Cloud Workload Protection Platforms (CWPP), as well as the functions of a Cloud Native Application Protection Platform (CNAPP) and features of Cortex Cloud.

PCCP學習資料 - PCCP下載

你想参加Palo Alto Networks的PCCP认证考试吗？你身边肯定有很多人参加过这个考试了吧？因为这是一个很重要的考试，如果取得这个考试的认证资格，你将可以得到很多的好处。那麼，你想別人請教怎樣通過考試的方法了嗎？準備考試的方法有很多種，但是最高效的方法是用一個好的工具。那麼對你來說什麼才是好的工具呢？當然是NewDumps的PCCP考古題了。

最新的 Certified Cybersecurity Associate PCCP 免費考試真題 (Q16-Q21):

問題 #16

Which characteristic of serverless computing enables developers to quickly deploy application code?

- A. Uploading cloud service autoscaling services to deploy more virtual machines to run their application code based on user demand
- B. Using Container as a Service (CaaS) to deploy application containers to run their code.
- C. Using cloud service spot pricing to reduce the cost of using virtual machines to run their application code
- **D. Uploading the application code itself, without having to provision a full container image or any OS virtual machine components**

答案：D

解題說明：

"In serverless apps, the developer uploads only the app package itself, without a full container image or any OS components. The platform dynamically packages it into an image, runs the image in a container, and (if needed) instantiates the underlying host OS and VM and the hardware required to run them."

問題 #17

Which type of attack obscures its presence while attempting to spread to multiple hosts in a network?

- A. Smishing
- B. Denial of service
- C. Reconnaissance
- **D. Advanced malware**

答案：D

解題說明：

Advanced malware is designed to evade detection and persist within a system, often using stealthy techniques to spread laterally across multiple hosts in a network without triggering alerts, making it especially dangerous and difficult to remove.

問題 #18

Routing Information Protocol (RIP), uses what metric to determine how network traffic should flow?

- A. Split Horizon
- **B. Hop Count**
- C. Shortest Path
- D. Path Vector

答案： B

解題說明：

Routing Information Protocol (RIP) is an example of a distance-vector routing protocol that uses hop count as its routing metric. To prevent routing loops, in which packets effectively get stuck bouncing between various router nodes, RIP implements a hop limit of 15, which limits the size of networks that RIP can support. After a data packet crosses 15 router nodes (hops) between a source and a destination, the destination is considered unreachable.

問題 #19

Which aspect of a SaaS application requires compliance with local organizational security policies?

- A. Data-at-rest encryption standards
- B. Vulnerability scanning and management
- C. Types of physical storage media used
- **D. Acceptable use of the SaaS application**

答案： D

解題說明：

SaaS applications are cloud-based software that users can access from anywhere and any device. This poses a challenge for organizations to ensure that their employees are using the SaaS applications in a secure and compliant manner. Therefore, organizations need to establish and enforce acceptable use policies (AUPs) for SaaS applications that define the rules and guidelines for accessing and using the applications, such as who can use them, what data can be stored or shared, and what actions are prohibited¹². AUPs help organizations to protect their data, prevent unauthorized access, and comply with local regulations and standards³. 問題 #20

Which of the following is a service that allows you to control permissions assigned to users in order for them to access and utilize cloud resources?

- **A. Identity and Access Management (IAM)**
- B. User and Entity Behavior Analytics (UEBA)
- C. User-ID
- D. Lightweight Directory Access Protocol (LDAP)

答案： A

解題說明：

Identity and access management (IAM) is a software service or framework that allows organizations to define user or group identities within software environments, then associate permissions with them. The identities and permissions are usually spelled out in a text file, which is referred to as an IAM policy.

問題 #21

.....

NewDumps的專家團隊針對Palo Alto Networks PCCP 認證考試研究出了最新的短期有效培訓方案，為參加Palo Alto Networks PCCP 認證考試的考生進行20個小時左右的培訓，他們就能快速掌握很多知識和鞏固自己原有的知識，還能輕鬆通過Palo Alto Networks PCCP 認證考試，比那些花大量的時間和精力準備考試的人輕鬆得多。
