## Cisco Implementing and Configuring Cisco Identity Services Engine Sample Questions (Q120-Q125):

### NEW QUESTION # 120

Which scenario does not support Cisco ISE guest services?

- A. wireless LAN controller with local WebAuth
- B. wired NAD with central WebAuth
- C. wired NAD with local WebAuth

- D. wireless LAN controller with central WebAuth

**Answer: C**

#### NEW QUESTION # 121

Which two values are compared by the binary comparison (unction in authentication that is based on Active Directory)?

- A. user-presented certificate and a certificate stored in Active Directory
- B. user-presented password hash and a hash stored in Active Directory
- C. subject alternative name and the common name
- D. MS-CHAPv2 provided machine credentials and credentials stored in Active Directory

**Answer: C,D**

Explanation:

Explanation

Basic certificate checking does not require an identity source. If you want binary comparison checking for the certificates, you must select an identity source. If you select Active Directory as an identity source, subject and common name and subject alternative name (all values) can be used to look up a user.
