

SolarWinds SCP-NPM Reliable Exam Registration & Reliable SCP-NPM Dumps Free

P.S. Free & New SCP-NPM dumps are available on Google Drive shared by TestSimulate: https://drive.google.com/open?id=16HH4mk2ICTY7E-Kc9PGo4NfEM_hLZv0p

Our SCP-NPM learning materials are carefully compiled by industry experts based on the examination questions and industry trends in the past few years. The knowledge points are comprehensive and focused. You don't have to worry about our learning from SCP-NPM exam question. We assure you that our SCP-NPM learning materials are easy to understand and use the fewest questions to convey the most important information. As long as you follow the steps of our SCP-NPM Quiz torrent, your mastery of knowledge will be very comprehensive and you will be very familiar with the knowledge points. This will help you pass the exam more smoothly.

SolarWinds SCP-NPM Certification Exam is an industry-recognized certification for IT professionals who want to demonstrate their proficiency in managing and monitoring network performance using the SolarWinds Network Performance Monitor (NPM) tool. SolarWinds Network Performance Monitor (NPM) Exam certification exam is designed to test the knowledge and skills of IT professionals who are responsible for managing complex networks and ensuring that they perform optimally.

Complete SCP-NPM Reliable Exam Registration | Amazing Pass Rate For SCP-NPM: SolarWinds Network Performance Monitor (NPM) Exam | Trusted Reliable SCP-NPM Dumps Free

We provide three versions of SCP-NPM study materials to the client and they include PDF version, PC version and APP online version. Different version boosts own advantages and using methods. The content of SCP-NPM exam torrent is the same but different version is suitable for different client. For example, the PC version of SCP-NPM study materials supports the computer with Windows system and its advantages includes that it simulates real operation exam environment and it can simulates the exam and you can attend time-limited exam on it. And whatever the version is the users can learn the SCP-NPM Guide Torrent at their own pleasures. The titles and the answers are the same and you can use the product on the computer or the cellphone or the laptop.

SolarWinds platform is widely recognized as one of the most robust and comprehensive network performance monitoring tools in

the market. The SCP-NPM certification exam covers a broad range of topics, including device discovery, network topology mapping, performance metrics, alerting, and reporting. SCP-NPM Exam also tests your ability to configure and customize SolarWinds NPM to meet specific network monitoring requirements.

SolarWinds Network Performance Monitor (NPM) Exam Sample Questions (Q27-Q32):

NEW QUESTION # 27

NetPath can analyze paths to which network segments?

- A. All of the above
- B. On-premise networks
- C. Cloud Networks
- D. Hybrid Networks

Answer: A

NEW QUESTION # 28

What is the most time-efficient way to create a report in NPM that shows the top 50 interfaces by percent utilization?

- A. Create an interface report and use a filter to restrict to the top 50
- B. Run the default top 25 interfaces by percent utilization report for different timeframes
- C. Edit the default top 25 interfaces by percent utilization report and update to the top 50
- D. Create a new advanced SQL query report

Answer: C

Explanation:

NPM provides a default report called Top 25 Interfaces by Percent Utilization that shows the interfaces with the highest average utilization over the selected time period¹. This report can be easily edited to change the number of interfaces displayed, the time period, the sorting order, the layout, and the filters². To create a report that shows the top 50 interfaces by percent utilization, you can simply edit this report and change the Limit option from 25 to 503. This is the most time-efficient way to create the report, as it does not require creating a new report from scratch, writing a SQL query, or running the report multiple times for different timeframes. Reference: 1: Network Performance Monitor Administrator Guide - Top 25 Interfaces by Percent Utilization 2: Network Performance Monitor Administrator Guide - Edit a report 3: Network Performance Monitor Getting Started Guide - Customize a report

NEW QUESTION # 29

You receive traps from your network devices and want to alert on a select message. How do you accomplish this?

- A. You cannot alert on traps through the Orion Platform
- B. Use Traps in Orion Alerts to configure the default trap alert to fire on the trap message you select to alert on
- C. Go to the Traps view and configure a new Log Viewer rule
- D. Configure Syslog alert actions on the Alert Actions tab

Answer: B

Explanation:

Traps are unsolicited messages sent by network devices to report events or issues. The Orion Platform can receive and process traps from any device that supports SNMP. To alert on a select message, you can use the Traps in Orion Alerts feature, which allows you to configure the default trap alert to fire on the trap message you select to alert on. You can also customize the alert conditions, actions, and triggers to suit your needs. For example, you can alert on traps that match a specific OID, source, or severity, and send an email, log a ticket, or run a script when the alert is triggered. References: Configure SNMP traps in NPM, Traps in Orion Alerts, Create alerts for SNMP traps

NEW QUESTION # 30

How can you add entities from NPM to monitor for all registered devices in your company domain?

- A. Select to query Domain Controllers in a Network Discovery and then select the Organizational Units (OUs) with the registered devices you want to scan
- B. Add each of your Domain Controllers as nodes to NPM and scan Active Directory Organization Units (OUs) for the registered devices
- C. Use the NPM Active Directory Discovery tool to find all registered devices on the domain
- D. Add each registered device individually, and then select the entities you want to monitor

Answer: A

Explanation:

Network Discovery is a feature of SolarWinds NPM that allows you to automatically discover and add network devices to the Orion Platform for monitoring. You can use Network Discovery to query Domain Controllers in your company domain and then select the Organizational Units (OUs) with the registered devices you want to scan. This way, you can add entities from NPM to monitor for all registered devices in your company domain in a single discovery. The other options are not as efficient or accurate as Network Discovery, as they either require manual addition of each device, or rely on the Domain Controllers to provide the list of registered devices, which may not be up-to-date or complete. References:

Discover your network devices and add them to the Orion Platform

Discover devices on your network using Active Directory

NEW QUESTION # 31

You need to build an Orion Map to show the relationships and connections between your Cloud servers and on premise infrastructure. You add the nodes but discover that the Orion Platform is not automatically mapping the connection between your cloud server and on premise router. You have verified that layer 2 and layer 3 topologies are being polled on the devices. How do you resolve this issue?

- A. You need to open the topology ports in your firewall between the on premise node and the cloud node
- B. You need to configure a custom connection between the cloud node and the on premise node
- C. You cannot monitor the connection between on premise and off premise devices
- D. You need to turn off layer 2 and layer 3 topology polling for cloud monitoring

Answer: B

Explanation:

Sometimes, the Orion Platform may not be able to automatically map the connection between your cloud server and on premise router, even if layer 2 and layer 3 topologies are being polled on the devices. This may happen if the devices are separated by a firewall, a VPN, or a NAT device that prevents the Orion Platform from discovering the link information. In such cases, you can manually create a custom connection between the cloud node and the on premise node on the Orion Map. You can also edit the properties of the custom connection, such as the name, the status, the bandwidth, and the utilization. By creating a custom connection, you can visualize and monitor the connection between your cloud server and on premise router on the Orion Map12.
