Pdf JN0-336 Braindumps | JN0-336 Valid Exam Labs
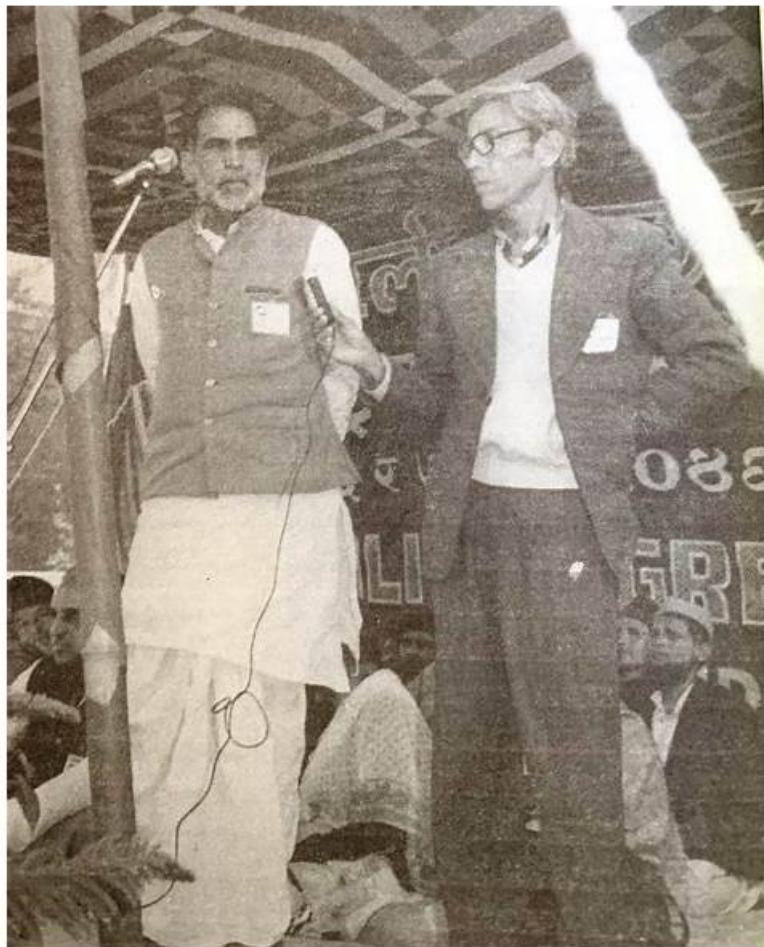

To make preparation easier for you, DumpsQuestion has created an JN0-336 PDF format. This format follows the current content of the Juniper JN0-336 real certification exam. The JN0-336 dumps PDF is suitable for all smart devices making it portable. As a result, there are no place and time limits on your ability to go through Juniper JN0-336 Real Exam Questions pdf.

Just like the old saying goes, motivation is what gets you started, and habit is what keeps you going. A good habit, especially a good study habit, will have an inestimable effect in help you gain the success. The JN0-336 exam prep from our company will offer the help for you to develop your good study habits. If you buy and use our study materials, you will cultivate a good habit in study. More importantly, the good habits will help you find the scientific prop learning methods and promote you study efficiency, and then it will be conducive to helping you pass the JN0-336 Exam in a short time. So hurry to buy the JN0-336 test guide from our company, you will benefit a lot from it.

Juniper JN0-336 Practice Test Software For Self-Evaluation

Nothing venture, noting have. Many people know Juniper certification will be a big effect for their career, but IT exams are difficult to pass as everyone knows. I want to introduce you our best products JN0-336 latest exam cram file which is famous for its 100% pass-rate. Candidates from all over the world choose us and clear their exams certainly with only little cost fee and 15-30 hours preparation before the exam. JN0-336 Latest Exam Cram file is useful and valid.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q41-Q46):

NEW QUESTION # 41
You want to be alerted if the wrong password is used more than three times on a single device within five minutes.
Which Juniper Networks solution will accomplish this task?

- A. Juniper Identity Management Service
- B. Adaptive Threat Profiling
- C. Juniper Secure Analytics
- D. Intrusion Prevention System

Answer: C

Explanation:
The Juniper Networks solution that will accomplish the task of alerting if the wrong password is used more than three times on a single device within five minutes is Juniper Secure Analytics (JSA). JSA is a security intelligence platform that collects, analyzes, and correlates network data from various sources, such as firewalls, routers, switches, servers, and applications. JSA can detect and respond to threats, anomalies, and vulnerabilities in real time using rules, offenses, reports, and dashboards. JSA can also integrate with JIMS (Juniper Identity Management Service) to obtain user identity information from Active Directory domains or syslog sources. JSA can use this information to create custom rules that trigger offenses or alerts based on user behavior or activity, such as failed login attempts or password changes.

NEW QUESTION # 42
On an SRX Series firewall, what are two ways that Encrypted Traffic Insights assess the threat of the traffic? (Choose two.)

- A. It decrypts the data to validate the hash.
- B. It decrypts the file in a sandbox.
- C. It validates the certificates used.
- D. It reviews the timing and frequency of the connections.

Answer: C,D

Explanation:
Encrypted Traffic Insights is a feature that enables the SRX Series firewall and the ATP Cloud to detect malicious threats that are hidden in encrypted traffic without decrypting the traffic. It does so by analyzing the metadata and connection patterns of the encrypted sessions.
Two ways that Encrypted Traffic Insights assess the threat of the traffic are:
It validates the certificates used: The SRX Series firewall extracts the server certificate from the encrypted session and compares its signature with a blocklist of known malicious certificates provided by ATP Cloud. If there is a match, the session is blocked and reported as a threat.
It reviews the timing and frequency of the connections: The SRX Series firewall sends the connection details, such as source and destination IP addresses, ports, protocols, and timestamps, to ATP Cloud.
ATP Cloud applies behavior analysis and machine learning algorithms to detect anomalous or suspicious patterns of connections, such as high frequency, low duration, or unusual timing. NEW QUESTION # 43
You want to use IPS signatures to monitor traffic.
Which module in the AppSecure suite will help in this task?

- A. AppTrack
- B. AppFW
- C. APPID
- D. AppQoS

Answer: B

Explanation:
The AppFW module in the AppSecure suite provides IPS signatures that can be used to monitor traffic and detect malicious

activities. AppFW also provides other security controls such as Web application firewall, URL filtering, and application-level visibility.

NEW QUESTION # 44

What information does encrypted traffic insights (ETI) use to notify SRX Series devices about known malware sites?

- A. certificates
- B. MAC addresses
- C. dynamic address groups
- D. domain names

Answer: D

Explanation:

Encrypted traffic insights (ETI) uses domain names to notify SRX Series devices about known malware sites. ETI is a feature of the SRX Series firewall that can detect and block malware that is hidden in encrypted traffic. It works by analyzing the domain names of the websites that the encrypted traffic is attempting to access. If the domain name matches a known malware site, ETI will send an alert to the SRX Series device, which can then take appropriate action to block the traffic. ETI is a useful tool for protecting against threats that attempt to evade detection by hiding in encrypted traffic.

NEW QUESTION # 45

You administer a JSA host and want to include a rule that sets a threshold for excessive firewall denies and sends an SNMP trap after receiving related syslog messages from an SRX Series firewall.
Which JSA rule type satisfies this requirement?

- A. offense
- B. event
- C. common
- D. flow

Answer: A

Explanation:

An offense rule in JSA is designed to aggregate multiple events or log entries based on specified criteria into a single offense, which can then trigger responses such as notifications or actions like sending an SNMP trap. This type of rule is well-suited for scenarios where you need to monitor for patterns or rates of events, such as excessive firewall denies, and take action when these exceed defined thresholds.
Offense rules can analyze both event and flow data, making them highly versatile for comprehensive security monitoring.

NEW QUESTION # 46

......

The DumpsQuestion is one of the leading platforms that have been offering valid, updated, and real Channel Partner Program JN0-336 exam dumps for many years. The Channel Partner Program Security, Specialist (JNCIS-SEC) JN0-336 Practice Test questions offered by the DumpsQuestion are designed and verified by experienced Security, Specialist (JNCIS-SEC) JN0-336 certification exam trainers.
