100% Pass Quiz High-quality Juniper - JN0-232 - Exam Vce Security, Associate (JNCIA-SEC) Free

This practice exam software includes all JN0-232 exam questions that have a high chance of appearing in the Security, Associate (JNCIA-SEC) exam. The JN0-232 practice exam allows you to set the number of questions and time for each attempt and presents you with a self-assessment report showing your performance. You might not be able to get all-in-one practice material for the Security, Associate (JNCIA-SEC) JN0-232 of such excellent quality anywhere else.

Juniper Security, Associate (JNCIA-SEC) Sample Questions (Q50-Q55):

NEW QUESTION # 50

Referring to the exhibit, which statement is correct?

```
[edit security policies from-zone Trust to-zone Untrust]
user@SRX# show
policy policy1 {
  match {
    source-address any;
    destination-address any;
    application junos-http;
  }
  then {
    permit;
  }
}
policy policy2 {
  match {
    source-address any;
    destination-address any;
    application junos-https;
  }
  then {
    permit;
  }
}
policy policy3 {
  match {
    source-address any;
    destination-address any;
    application junos-http;
  }
  then {
    deny;
  }
}
```

- A. policy1 will be shadowed because it matches the same application as policy3.
- B. policy2 will be shadowed because it matches the same application as policy1.
- C. policy3 will be shadowed because it matches the same application as policy1.
- D. None of the policies will be shadowed.

Answer: C

Explanation:

In Junos security policies, rules are evaluated sequentially from top to bottom, and once a match occurs, the subsequent policies are not checked. In the configuration shown, policy1 allows junos-http traffic, and policy3 also matches the same application (junos-http) but denies it.

Because policy1 appears first and already permits this traffic, policy3 will never be evaluated for that same traffic type. Therefore, policy3 is shadowed by policy1.

NEW QUESTION # 51

Content filtering supports which two of the following protocols? (Choose two.)

- A. TFTP
- B. HTTP
- C. SNMP
- D. SMTP

Answer: B,D

Explanation:

Content filtering on SRX devices inspects and controls specific file types transferred across certain application protocols:

* SMTP (Option A):Supported. Content filtering can block specific file attachments in emails.

* HTTP (Option D):Supported. Content filtering can block downloads of specific file types over web traffic.

* SNMP (Option B):Not supported; SNMP is a management protocol, not a content delivery protocol.

* TFTP (Option C):Not supported by content filtering.

Correct Protocols:SMTP and HTTP

Reference:Juniper Networks -Content Security and Filtering Supported Protocols, Junos OS Security Fundamentals.

NEW QUESTION # 52

You plan to use unified security policies to identify and control nested HTTP applications. In this scenario, which two actions must you perform on your SRX Series Firewall? (Choose two.)

- A. Install the application identification (AppID) feature license on the SRX Series Firewall.
- B. Create all the unified security policies in the global zone.
- C. Include dynamic application objects in your security policies.
- D. Disable the default security policy.

Answer: A,C

Explanation:

The AppID license must be installed and active to enable application identification, which is required for unified security policies to recognize and control nested HTTP applications.

Dynamic application objects must be included in the unified security policies to match and control specific applications identified through AppID, such as Facebook within HTTPS traffic.

NEW QUESTION # 53

Which security policy action will cause traffic to drop and a message to be sent to the source?

- A. reject
- B. deny
- C. next-policy
- D. permit

Answer: A

Explanation:

The reject action causes the SRX firewall to drop the traffic and send an ICMP or TCP reset message back to the source, informing it that the connection was denied.

NEW QUESTION # 54

Which statement is correct about static NAT?

- A. Static NAT rules are evaluated after source NAT rules.
- B. Static NAT implements unidirectional one-to-one mappings.
- C. Static NAT implements unidirectional one-to-many mappings.
- D. Static NAT supports port translation.

Answer: B

Explanation:

Static NAT (Network Address Translation) is a type of NAT that maps a public IP address to a private IP address. With static NAT, a one-to-one mapping is created between a public IP address and a private IP address. This means that a single public IP address is mapped to a single private IP address, and all incoming traffic to the public IP address is forwarded to the private IP address.

NEW QUESTION # 55

.....

Security, Associate (JNCIA-SEC) JN0-232 exam dumps are available in an eBook and software format. Many people get burdened when they hear of preparing for a Security, Associate (JNCIA-SEC) JN0-232 examination with software. Juniper JN0-232 Practice Exam software is easy to use. You don't need to have prior knowledge or training using our JN0-232 exam questions. Juniper JN0-232 exam dumps are user-friendly interfaces.
