Valid Dumps AD0-E724 Ebook - Simulations AD0-E724 Pdf

There is no doubt that advanced technologies are playing an important role in boosting the growth of Adobe companies. This is the reason why the employees have now started upgrading their skillset with the Commerce Developer Professional (AD0-E724) certification exam because they want to work with those latest applications and save their jobs. They attempt the AD0-E724 exam to validate their skills and try to get their dream job.

Adobe Commerce Developer Professional Sample Questions (Q124-Q129):

NEW QUESTION # 124

A message queue currently has `queue/consumer-wait-for-messages` set to `true`, which allows the consumer process to run until a message is inserted into the queue. A piece of functionality is driven by data stored in the model `\Magento\Variable\Model\Variable` and this value is only loaded once during the consumer run. If the variable is updated we want the consumer to restart so that the new value is loaded into memory without having to reload the variable on each message consumed. The Adobe Commerce developer has created an after plugin on the `\Magento\Variable\Model\Variable::save()` function. How would the developer use the plugin to trigger the consumer restart?

- A. Call the function `\Magento\Framework\MessageQueue\Consumers\TriggerRestartInterface::trigger()`.
- B. Set the global Cache key `trigger_consumer_restart` to 1.
- C. Call the function `\Magento\Framework\MessageQueue\PoisonPill\PoisonPillPutInterface::put()`.

Answer: C

Explanation:

In Adobe Commerce, when a consumer process needs to restart, the `PoisonPillPutInterface` can be used. The `put()` method of this interface triggers a "poison pill," which signals running consumers to restart. This is particularly useful when updated data needs to be reloaded into memory, as in this scenario with the `\Magento\Variable\Model\Variable`.

Poison Pill Mechanism:

The poison pill method tells the message queue consumer to stop its current process and restart, allowing it to pick up any configuration or data changes that occurred since the last start.

Why Option A is Correct:

By calling `PoisonPillPutInterface::put()`, the consumer will receive a restart signal, which is ideal for cases where data loaded at the beginning of the consumer's lifecycle must be updated.

Option B is incorrect because `TriggerRestartInterface::trigger()` does not exist in the Magento framework.

Option C is also incorrect as setting a cache key alone does not trigger a consumer restart.

Implementation:

Use an after plugin on the `save()` method to trigger `PoisonPillPutInterface::put()` after the variable is saved.

NEW QUESTION # 125

What is one way a developer can upgrade the ECE-Tools package on an Adobe Commerce Cloud project?

- A. Cloud CLI for Commerce tool
- B. Project Web Interface
- C. Composer

Answer: C

Explanation:

According to the Adobe Commerce Developer Documentation, one way a developer can upgrade the ECE-Tools package on an Adobe Commerce Cloud project is by using Composer, which is a dependency management tool for PHP projects. The ECE-Tools package contains scripts and tools that help manage and deploy Adobe Commerce Cloud projects on the cloud infrastructure. To upgrade the ECE-Tools package using Composer, the developer needs to run the following command in the project root directory:

```
composer update magento/ece-tools --with-dependencies
```

On an Adobe Commerce Cloud project, the recommended way to upgrade the ECE-Tools package is through Composer, a dependency manager for PHP. Composer is used to manage the dependencies of the project, including ECE-Tools, and it provides the necessary commands to update packages to their latest versions or to specific versions as required.

NEW QUESTION # 126

How would a developer turn on outgoing emails on an Adobe Commerce Cloud Staging environment?

- A. Access the Project Web Interface and select the Staging environment.
Select Configure environment.
Toggle Outgoing emails On
- B. From the command line

- ece-tools enable_smtp true
- C. From the command line
magento-cloud environment:info -p <project-id> -e <environment-id> enable_smtp true

Answer: A

Explanation:

The developer can turn on outgoing emails on an Adobe Commerce Cloud Staging environment by accessing the Project Web Interface and selecting the Staging environment. Then, the developer can select Configure environment and toggle Outgoing emails On. This will enable the SMTP service for the Staging environment and allow emails to be sent from the application. Verified References: [Magento 2.4 DevDocs] 1 In Adobe Commerce Cloud, email functionality for Staging and Production environments can be controlled through the Project Web Interface. To enable outgoing emails, you can toggle the setting from within the environment configuration.

* Using the Project Web Interface:

* Navigate to the Project Web Interface, select the Staging environment, and configure the environment settings. Here, you can enable or disable outgoing emails with a simple toggle.

* Why Option C is Correct:

* This method directly interacts with Adobe Commerce Cloud's environment settings through the GUI. Options A and B are not valid commands in Adobe Commerce Cloud for enabling SMTP or email.

NEW QUESTION # 127

A client would like to add an image icon in front of the telephone field to the shipping address form on a checkout page. What is the correct way to modify the UI component to set a custom template file for the field?

- A.

```

***
<block name="telephone" xsi:type="array">
<arguments name="config" xsi:type="array">
<item name="elementTpl" xsi:type="string">%Vendor_Module%/form/element/%your_template%</item>
</arguments>
</block>
***

```

- B.

```

***
<block name="telephone" xsi:type="array">
<arguments name="config" xsi:type="array">
<item name="elementTpl" xsi:type="string">%Vendor_Module%/form/element/%your_template%</item>
</arguments>
</block>
***

```

- C.

```

***
<item name="telephone" xsi:type="array">
<arguments name="config" xsi:type="array">
<item name="elementTpl" xsi:type="string">%Vendor_Module%/form/element/%your_template%</item>
</arguments>
</item>
***

```

- D.

```

...
<item name="telephone" xsi:type="array">
<item name="config" xsi:type="array">
<item name="elementTpl" xsi:type="string">%Vendor_Module%/form/element/%your_template%</item>
</item>
</item>
...

```

Answer: B

Explanation:

To add an image icon in front of the telephone field in the shipping address form on the checkout page, the correct way is to modify the UI component by setting a custom template file for the field. The snippet in option B is the correct one because it uses the `<block>` element and sets the `elementTpl` to the custom template path within the `arguments` node under the `config` node. This modification will instruct Magento to use the specified custom template file for rendering the telephone field, allowing for the addition of an image icon in front of it.

NEW QUESTION # 128

How can a custom CMS Page be set as a store home page?

- A. In the store configuration, set a custom CMS Page to be a CMS home page
- B. In the CMS Page admin grid, select the checkbox for the page under the "Home Page" column.
- C. In the CMS Page admin form, set the "Default Home Page" value to "yes"

Answer: A

Explanation:

To set a custom CMS Page as a store home page, the developer or merchant should follow these steps:

- * In the Admin panel, go to Content > Pages and create or edit a CMS Page that will be used as a home page.
- * In the Admin panel, go to Stores > Configuration > General > Web > Default Pages.
- * In the CMS Home Page field, select the CMS Page that was created or edited in step 1.
- * Save the configuration.

There is no "Home Page" column in the CMS Page admin grid or "Default Home Page" value in the CMS Page admin form.

Verified References: [Adobe Commerce User Guide - Set up your home page] In Adobe Commerce, to set a custom CMS page as the store's homepage, you need to go to the store configuration. Specifically, navigate to Content > Design > Configuration, select the relevant store view, and then under the "Default Pages" tab, set the "CMS Home Page" option to your custom CMS page.

Options A and B do not exist in the Adobe Commerce admin panel for setting a home page.

NEW QUESTION # 129

.....

Our AD0-E724 study materials provide free trial service for consumers. If you are interested in our AD0-E724 study materials, and you can immediately download and experience our trial question bank for free. Through the trial you will have different learning experience on AD0-E724 exam guide, you will find that what we say is not a lie, and you will immediately fall in love with our products. As a key to the success of your life, the benefits that our AD0-E724 Study Materials can bring you are not measured by money. AD0-E724 test torrent can help you pass the exam in the shortest time.
