Each question and answer are researched and verified by the industry experts. Our team updates the GH-100 Certification material periodically and the updates include all the questions in the past thesis and the latest knowledge points. So our service team is professional and top-ranking.

## Microsoft GitHub Administration Sample Questions (Q52-Q57):

### NEW QUESTION # 52

Your enterprise has multiple organizations, and you want to ensure consistent security policies across all teams. Which feature should you use?

- A. Organization-specific teams with custom policies.
- B. Assigning admin permissions to all team members.
- C. Outside collaborators for all repositories.
- D. Enterprise-level teams with inherited enterprise policies.

**Answer: D**

Explanation:

By using enterprise-level teams with inherited enterprise policies, you can group members across all your organizations and enforce

the same security settings globally - ensuring every team abides by the enterprise's mandatory policies.

### NEW QUESTION # 53

What is the first step when sensitive data is accidentally pushed to a public GitHub repository?

- A. Delete the repository
- B. Open an issue to inform users
- **C. Revoke any exposed credentials immediately**
- D. Force push a commit removing the data

**Answer: C**

Explanation:

Revoke and/or rotate the exposed credentials immediately so they can no longer be used - this is the critical first step before you undertake any history-rewriting or cleanup.

### NEW QUESTION # 54

Which of the following GitHub token types supports fine-grained repository permissions AND is recommended for CI/CD automation?

- A. Personal Access Tokens (PATs)
- B. Device Tokens
- C. OAuth tokens
- **D. GitHub App Installation Access Tokens**

**Answer: D**

Explanation:

GitHub App Installation Access Tokens are privileged to the exact permissions you grant the App - down to individual repositories - and rotate automatically, making them the recommended choice for CI/CD automation workflows that demand least-privilege, fine-grained access.

### NEW QUESTION # 55

Which Git operation is not included in the Git activity audit log?

- A. Fetch
- B. Push
- C. Clone
- **D. Delete branch**

**Answer: D**

Explanation:

Delete branch operations aren't tracked as Git-activity events; the Git activity audit log only records Git events such as clone, fetch (pull), and push.

### NEW QUESTION # 56

When comparing fine-grained Personal Access Tokens (PATs) with classic PATs, which of the following statements is accurate?

- **A. Fine-grained PATs permissions can be scoped to specific repositories.**
- B. Classic PATs offer more permission controls than fine-grained PATs.
- C. Classic PATs can be restricted to specific organizations, but fine-grained PATs cannot.
- D. Fine-grained PATs automatically renew while classic PATs require manual renewal.

**Answer: A**

Explanation:

Fine-grained personal access tokens let you scope permissions down to individual repositories, whereas classic PATs grant access across every repo the user can reach.

## NEW QUESTION # 57

.....

Our GH-100 study materials boost high passing rate as more than 98% and hit rate so that you needn't worry that you can't pass the test too much. We provide free tryout before the purchase to let you decide whether it is valuable or not by yourself.
